Hyperautomation with Power Platform

V2.0 from Nov 30, 2023

Agenda

The need for automation

A single platform for automation

- About Power Platform
- Power Platform and AI
- Power Platform patterns of value
- Hyper automation with Power Platform

The Hyper automation journey

- Discover
- Automate
- Orchestrate
- Extend

Copilot Studio

Next steps

The need for automation

Automation for a modern world

Humans excel at **creative** and **strategic** thinking, but we spend much of our time performing **repetitive and manual tasks**

Changing workforce

Isolated systems,
disconnected applications

60%

Report an application development backlog¹

Complex, slow,
expensive to deploy

37%

Still using paper to manage critical business processes²

Difficult to update,
maintain and operate

64%

Collecting and processing data have the highest automation potential³

Automating business challenges

More remote workers

Disparate systems, less standardization, lower visibility, greater need for information sharing

Streamlined workforces

Higher workloads, capacity constraints, time-starved employees

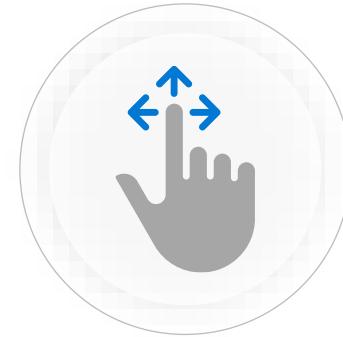

Higher customer demands

Greater urgency, higher expectations, and decreased satisfaction

Solve challenges **faster** with low-code and AI

Low-code and **AI** empowers users of all kinds to create solutions that solve personal and business-wide challenges.

Drag-and-drop

Conversational
AI

Action
recorder

Built-in security and governance to protect your data

Opportunities for automation

Industry	Use Cases			Scenarios
 Financial Services	Data Management <ul style="list-style-type: none">Update loan data in a database applicationCollect all loan payment information	Client Requests <ul style="list-style-type: none">Activate customer bank accountsProcess customer requests for banking/ insurance statements	Back Office <ul style="list-style-type: none">Create and send financial statements to regulatory bodiesTrack travel and general expenses	<ul style="list-style-type: none">Managing credit decisioningGenerating reportsProcessing invoicesProcessing insurance claims
 Healthcare	Patient Care <ul style="list-style-type: none">Track patient registrationGuide patients upon arrival through check-in processes	Data Management <ul style="list-style-type: none">Retrieve medical information and input into medical recordsDuplicate Electronic Health Records across relevant systems	Back Office <ul style="list-style-type: none">Add new providers or renew the contract of an existing providerMonitor payment progress of patient bills	<ul style="list-style-type: none">Personalizing patient careScheduling employeesProcessing and tracking claims

AI Builder

aka.ms/PowerPlatform

CONNECT TO ALL YOUR INTERNAL AND EXTERNAL DATA SOURCES

Over 1,000 Power Platform data connectors

Built-in connectivity to cloud services, content services, databases, and APIs

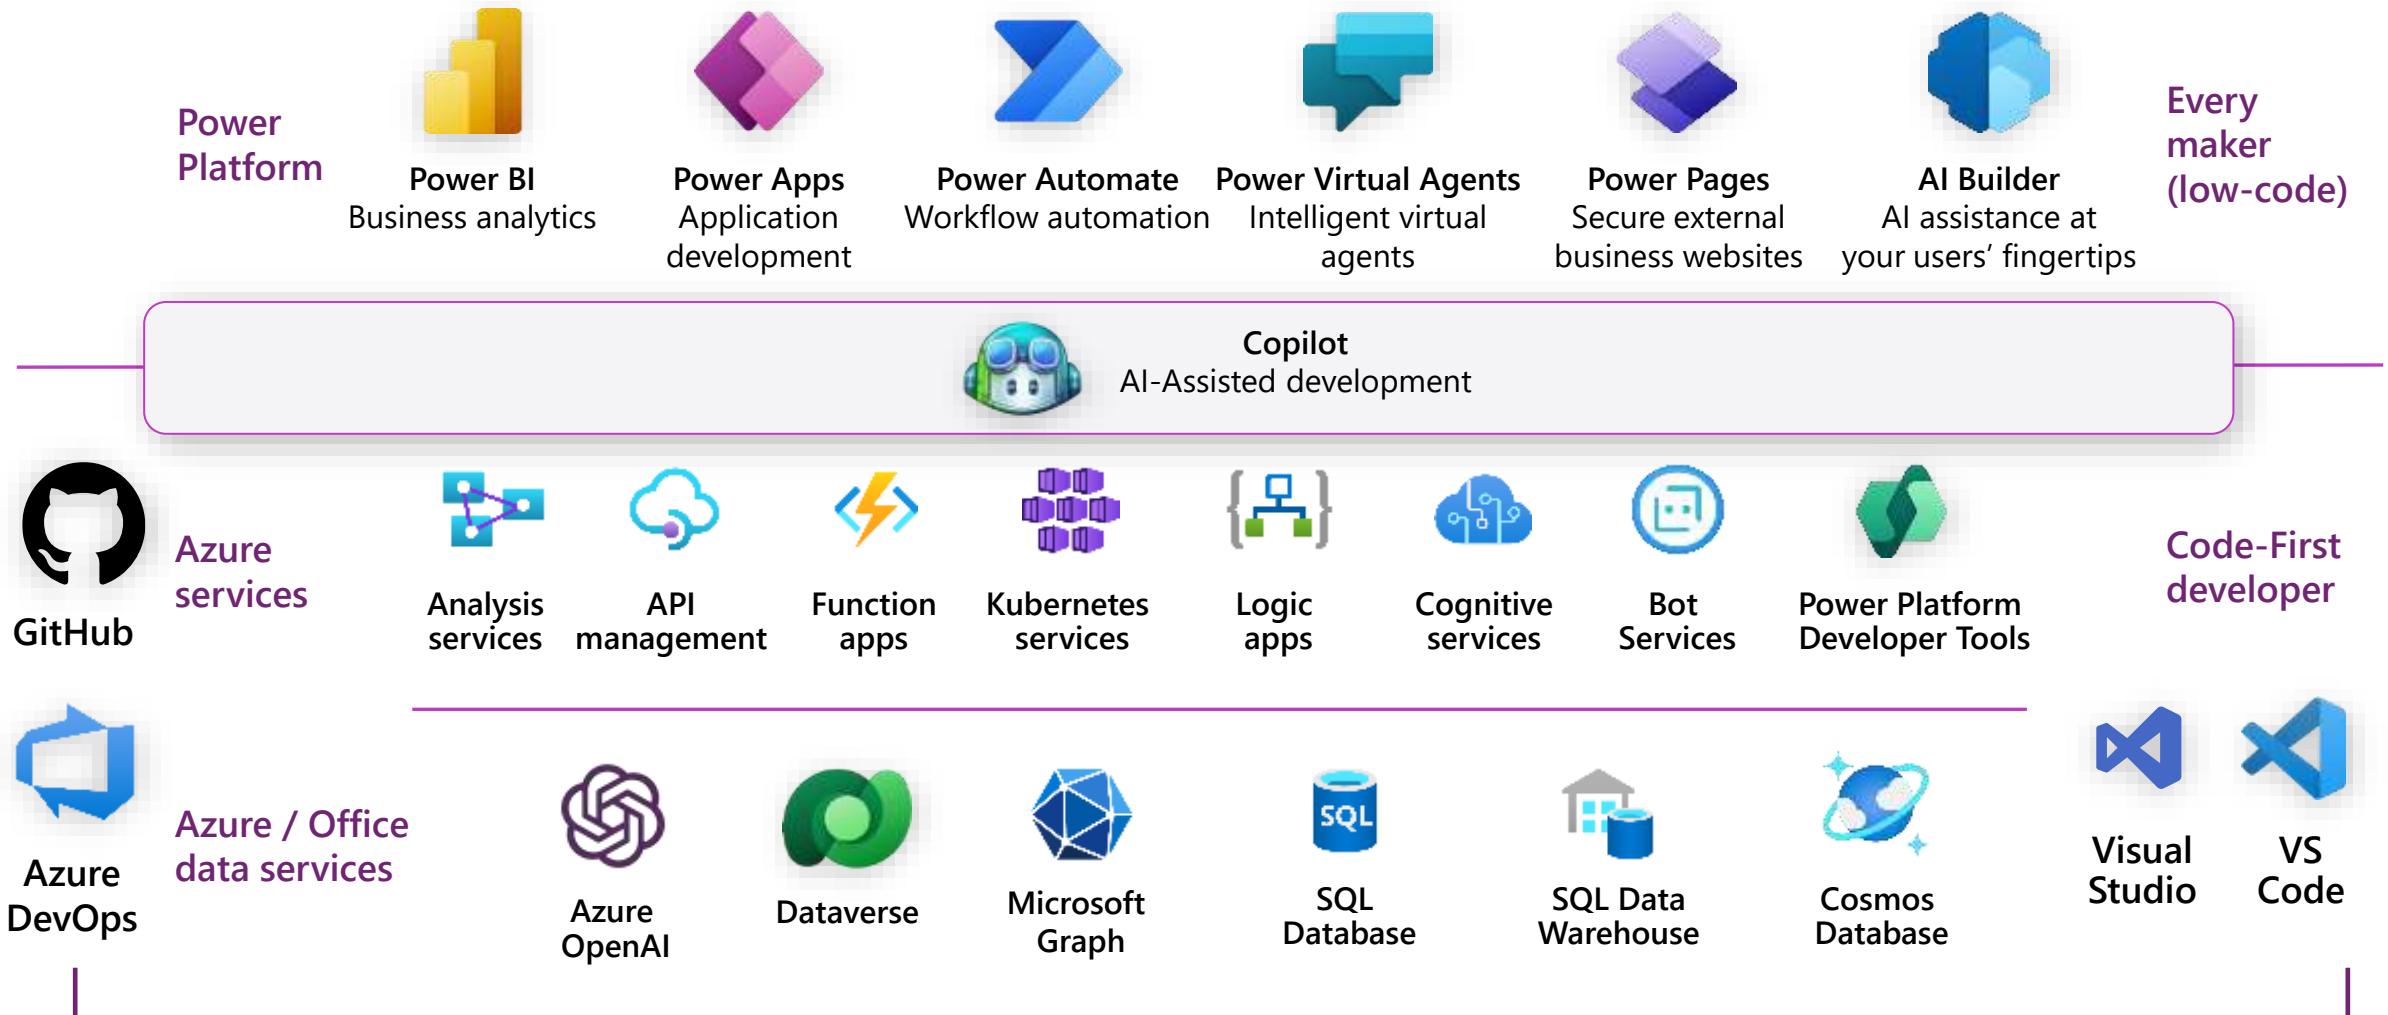

Seamless hybrid connectivity via the on-premises data gateway

Custom connectors as building blocks for citizen developers

Robotic Process Automation is the ultimate connector, if necessary

Develop Faster than Ever Before

Easily publish your custom APIs to Power Platform

Azure API Management enables professional developers to publish their backend service as APIs, and easily export these APIs to the Power Platform

With this capability, citizen developers can use the **Power Platform** to create and distribute apps that are based on internal and external APIs managed by API Management.

[Learn more](#)

The screenshot shows the Azure API Management interface for creating a connector to the Power Platform. The left sidebar lists various management options: APIs, Products, Subscriptions, Named values, Backends, API Tags, and Power Platform. The 'Power Platform' option is highlighted with a red box. The main right-hand pane is titled 'Create a connector' and contains sections for selecting an API and a PowerApp environment. The 'API' section shows 'Demo Conference API' selected. The 'PowerApps' section shows 'Personal Productivity' selected as the environment to publish to, and 'MyAPIMConnector' entered as the API display name. A checkbox for 'Create subscription key connection parameter' is checked. At the bottom are 'Create' and 'Back' buttons.

What AI does for Power Platform

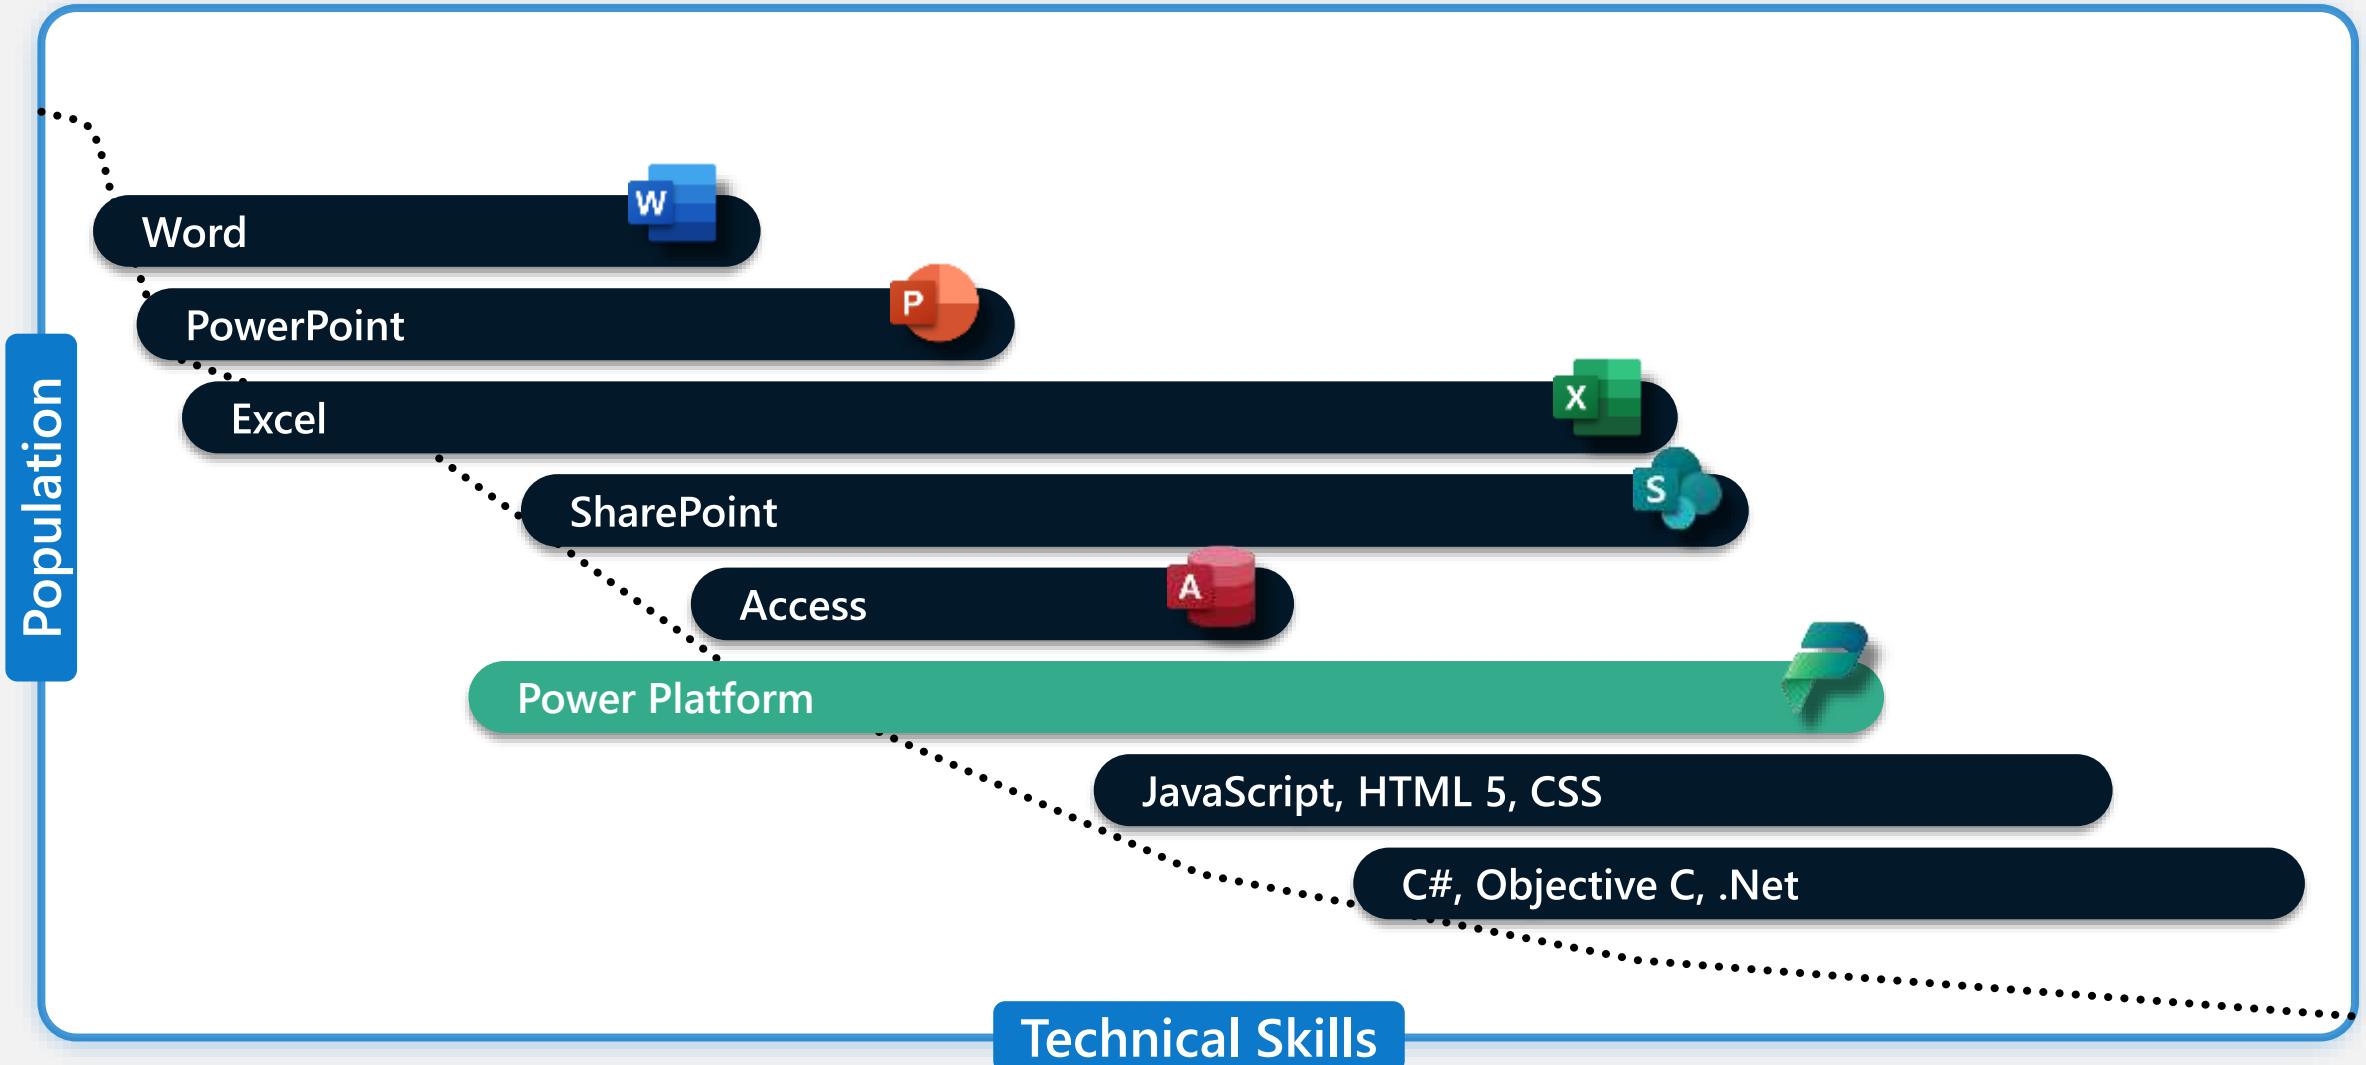

Easier to **make** apps,
automations, copilots, and sites

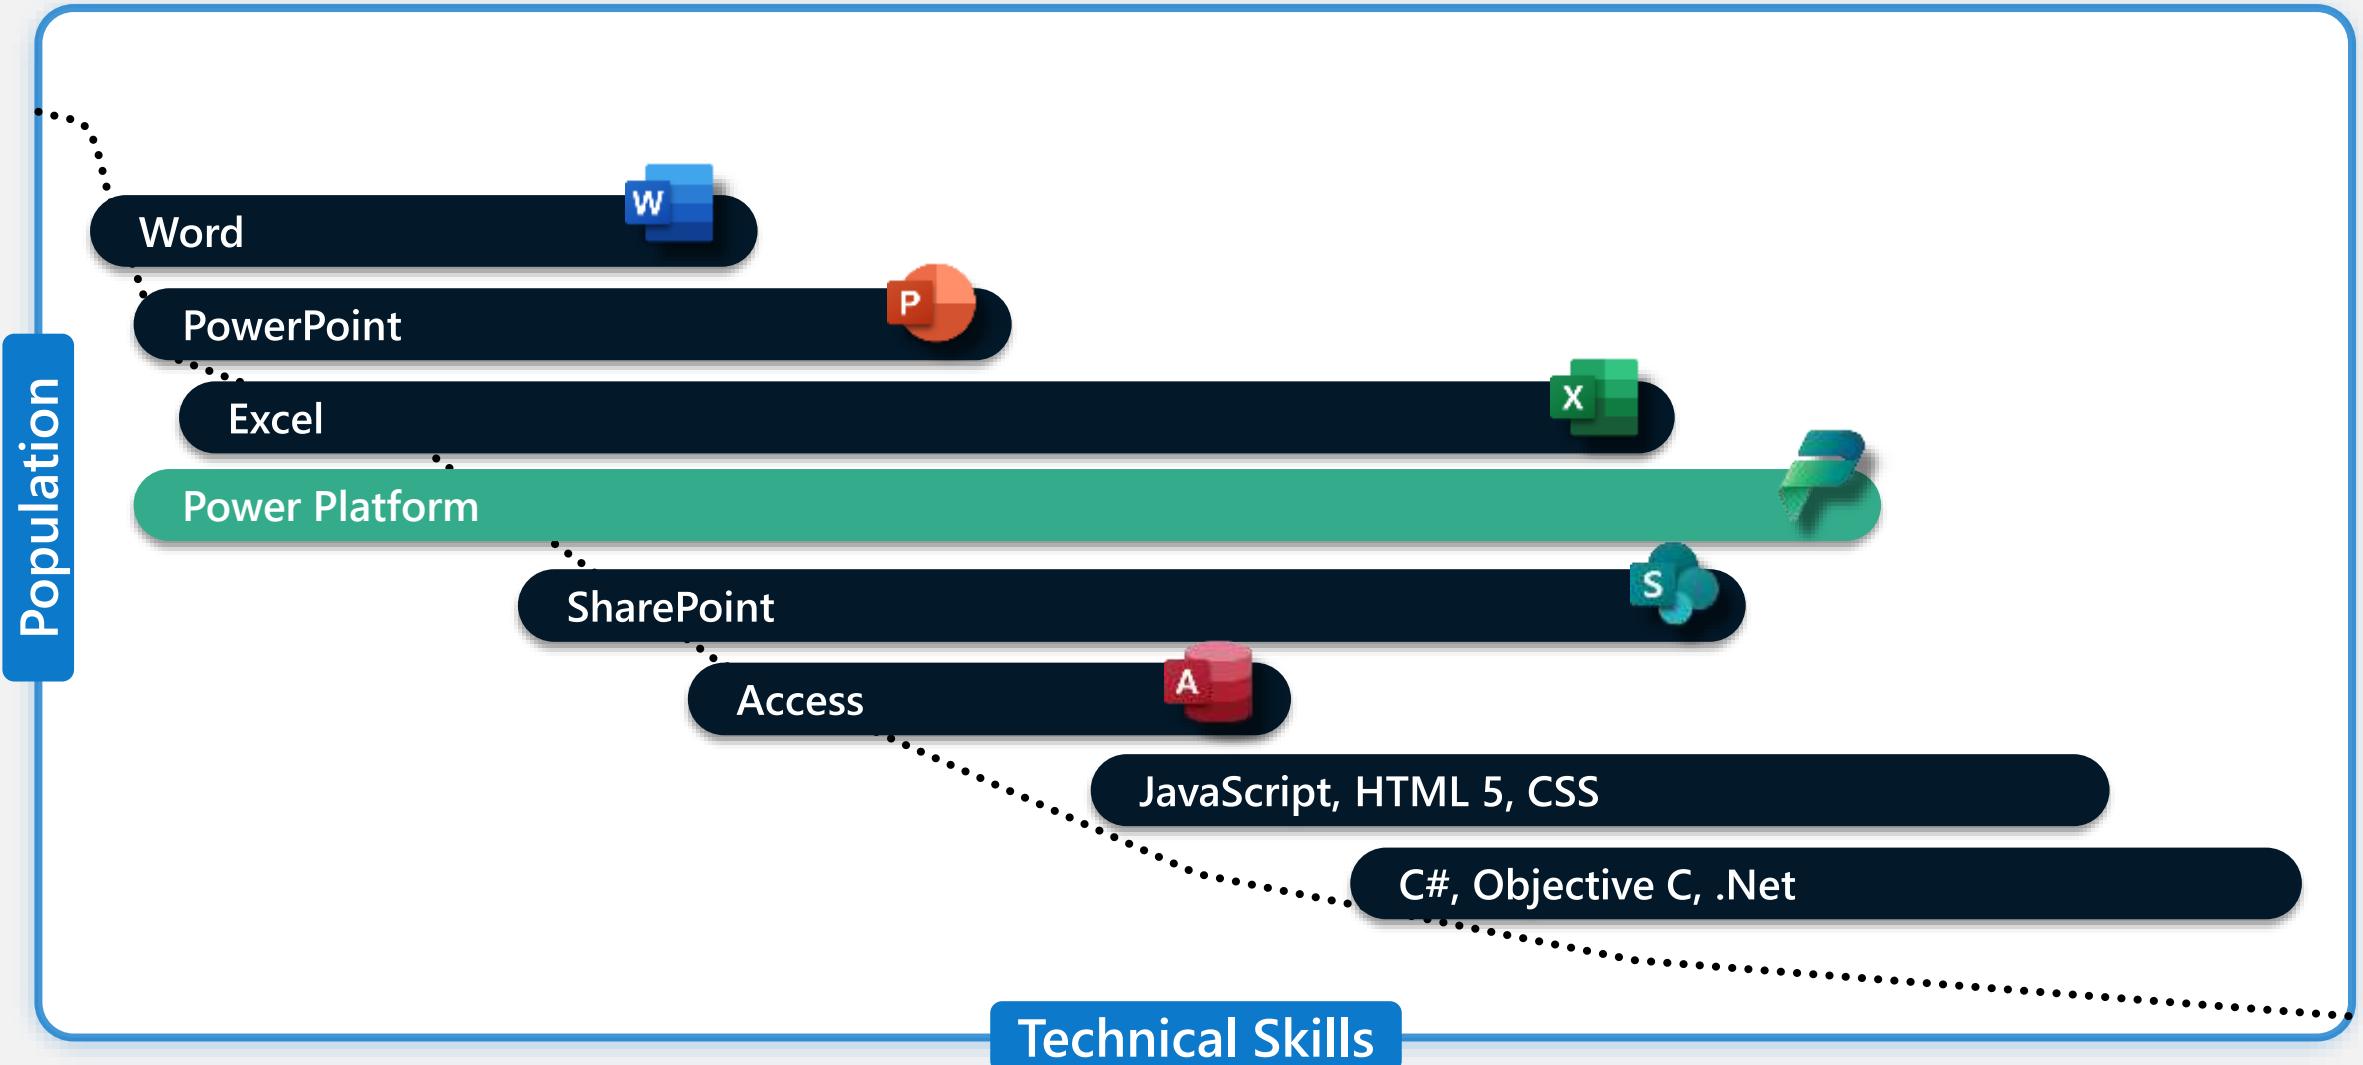

Richer to use apps,
automations, copilots, and sites

Low Code Adoption

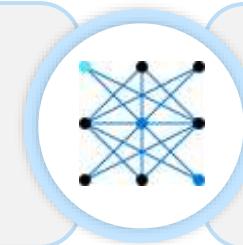

Low Code Adoption + AI Copilot

Work smarter and faster

with AI designed for everyone

Across Power Platform

Across Microsoft

Power Platform

AI powered insight empowers everyone in your organization to make data-driven decisions.

Identify and prioritize problem areas in your processes like bottlenecks, then act quickly with AI recommendations for optimization and automation.

Copilot

AI assisted authoring available "at your fingertips" allows developers and non-developers alike to build, edit, and extend solutions using natural language.

Build quickly and more easily by using Copilot to write code, recommend next steps, and access documentation through chat.

AI Builder

AI powered processing infuses intelligence into business processes with prebuilt and custom AI models for document processing, image data extraction, prediction, and analytics.

Build, train, and publish AI models without a single line of code or the help of a data scientist.

Copilot and the age of AI

Companies with highly engaged workforces had better financial outcomes.

Productivity

74%

say AI enables them to focus
on more satisfying work.¹

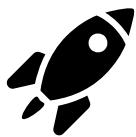

\$46,511

On average, each additional point of engagement reported by employees correlated with a +\$46,511 difference in market cap per employee.²

Power Platform patterns of value

Power Platform Patterns of Value

Why IT chooses Power Platform

Agility

Create rich apps, automations, and bots fast with AI Copilot and low-code tools.

Governance

View, control, and manage policies, usage, onboarding, ALM via Managed Environments.

Security

Built-in Identity and user management, DLP, encryption, compliance, and privacy.

Responsible AI

AI that is fair, reliable, safe, private, secure, transparent, accountable, and inclusive.

Pro Dev Friendly

APIs, Connectors, Custom Connectors, PCF controls, Azure DevOps, and Visual Studio support.

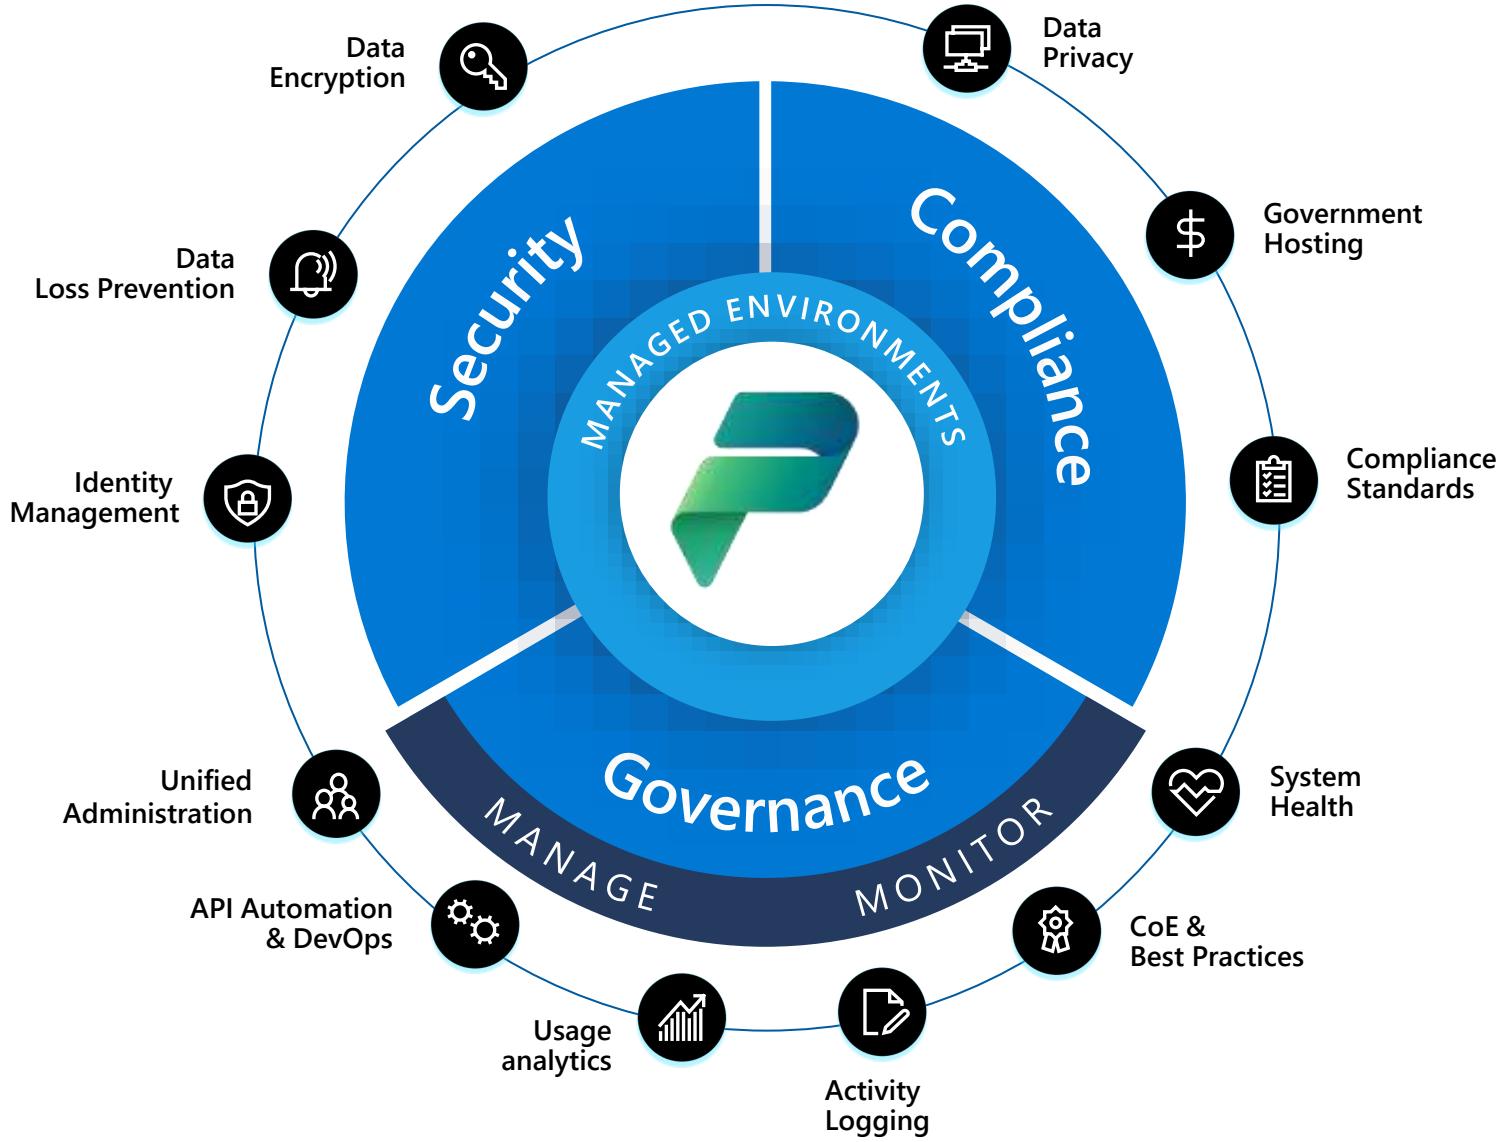

Accessibility

Build accessible and compliant apps easily for Windows, Web, iOS, and Android.

With Power Platform, organizations can reimagine business, IT, and developer **culture** and elevate all employees.

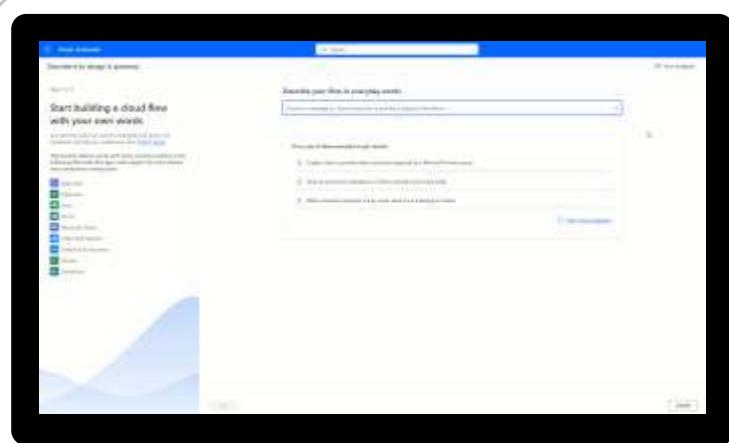

Power Platform Gartner 2023

Power Platform
offers
unmatched
governance and
security controls
at scale today

The right tools for your governance requirements

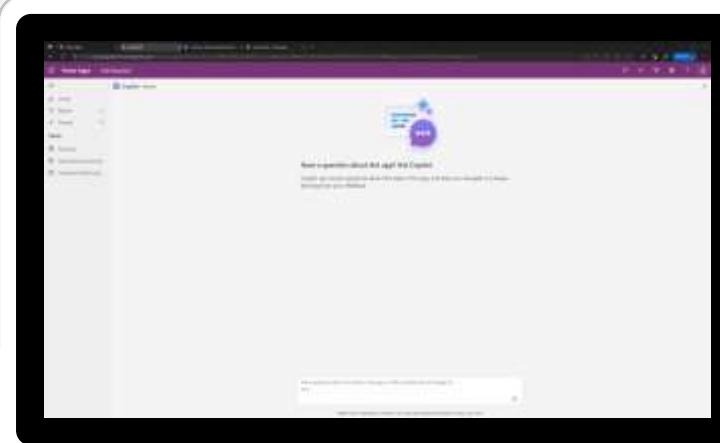

Power Platform Admin Center

Standard governance offering:

- Build guardrails around data, apps, and environments
- View analytics on low code assets across your organization

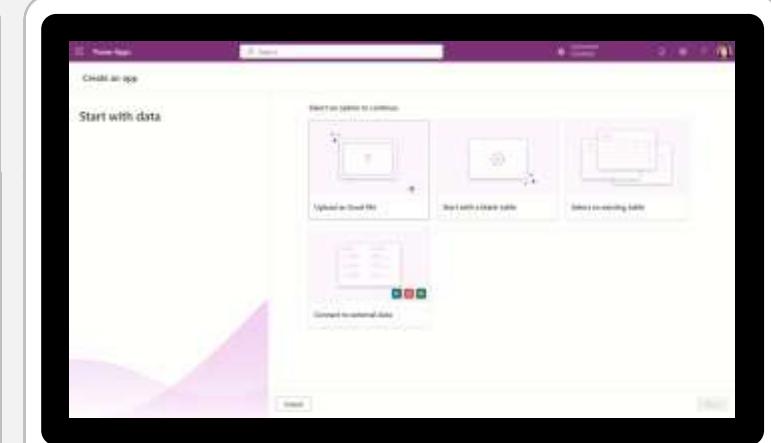

Managed Environments for Power Platform

Premium governance offering:

- Enable governance-at-scale without additional IT resources
- Proactively build and enforce best practices while gaining key insights and analytics

Center of Excellence Kit

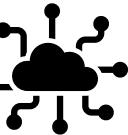

Extensible governance add-on:

- Enhance your governance journey with powerful open-source tools
- Drive innovation and improvement faster

Power Platform Patterns of Value

How Business uses Power Platform

App Modernization

Update, rearchitect, and rebuild apps at scale and address backlog.

Business Agility

Improve processes and experiences for core systems: SAP, Oracle, Salesforce.

Accelerate Pro Development

Reduce time and effort in creating enterprise-grade apps.

Enhance Employee Experience

Interact with business data with ease in Microsoft 365 and Teams.

Empower Departments

Enable departments to solve business challenges with IT governance.

Optimize Hyperautomation

End-to-end automation with RPA, DPA, AI, chatbots, more.

Caterpillar

Rental equipment turn around processing app reduced entire process to **1-day**

Ernst and Young

General ledger posting process connected to SAP yields **30% Cost reduction from**

Blackmores Group

Pro-code plus No-code practice reduced time to produce key supplier reports by **50%**

American Airlines

Frontline connected through Teams and Power Apps save **10 hours** of taxi time per day

T-Mobile

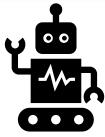

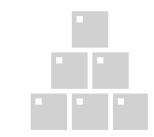

Employee led initiatives facilitated by Marketing team saves **\$4M+** from employee initiatives

Pacific Gas & Electric

Digital productivity program supported by Cognizant saved **75,000 hours** across organization

What is hyperautomation?

Hyperautomation is a business-driven approach to identify, vet and automate as many business and IT processes as possible. It requires the orchestrated use of multiple technologies, tools, and platforms, including RPA, low-code platforms and process mining tools.*

Why hyperautomation?

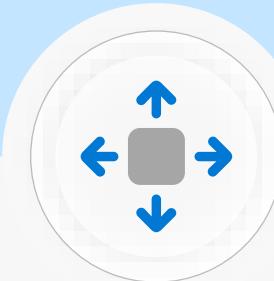

Solve business challenges faster

End-to-end automation and process modernization with RPA, DPA, embedded AI, chatbots, and process mining.

Build a culture of automation and digital transformation with the full Power Platform solution.

Efficiently scale automation and give IT controls they need to drive a secure and compliant organization.

By 2025, 60% of organizations will capitalize on disruption with an enterprise-and ecosystem-wide approach to automation, leveraging model-based enterprise concepts, COEs, and low/no-code platforms.

How does low code help in process modernization?

HARNESS THE POWER OF LOW-CODE AUTOMATION

Power Automate boosts productivity for everyone

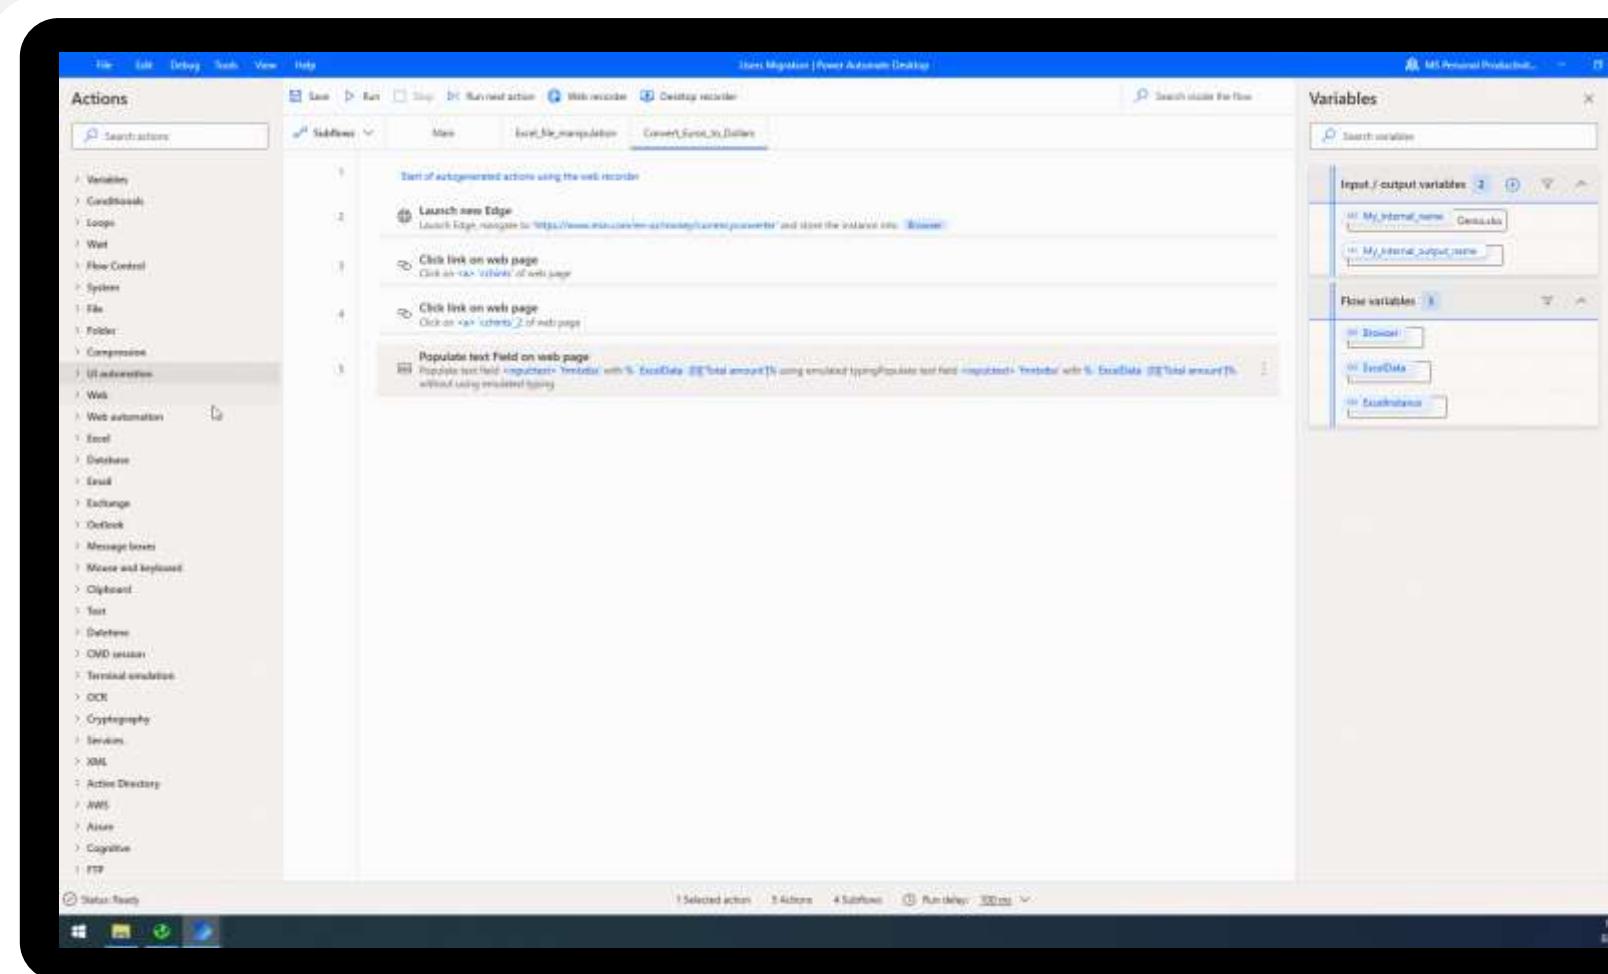

Digital Process Automation (DPA) allows resilient, cloud-native automation through the creation of cloud flows

Business Process Automation (BPA) streamlines complex processes for end users at scale

Robotic Process Automation (RPA) uses robots that emulate human actions to automate activities

AI Builder creates intelligent automated workflows

Process/Task Mining enables users to visualize processes and gain deep insights into opportunities to optimize

Hyperautomate across your ecosystem

A comprehensive, low-code automation solution with extensibility and connectivity

1 Discover

Continuously improve your business with **task and process mining** to identify bottlenecks and opportunities for automation.

2 Automate

Automate workflows with modern and legacy systems alike using advanced **DPA** and **RPA** solutions.

3 Orchestrate

Securely scale across your organization with governance, data loss prevention, and hosted infrastructure.

4 Extend

Infuse automation in chatbots, websites, apps, and more with **Microsoft Power Platform** and native integration within the Microsoft ecosystem.

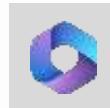

Extensibility

Windows 11

Connectivity

1,000+ 3rd party connectors, including custom and on-prem

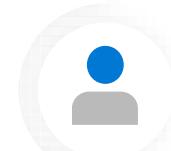

**Discover what to
automate**

Take the guesswork out of automation

“

I don't know
what to
automate

Use **process mining** to record steps in your process

Review the **visual process map** to identify bottlenecks
and opportunities for automation

Based on what you learned, start automating your
process with **flows**

TAKE THE GUESSWORK OUT OF AUTOMATION

Process and task mining

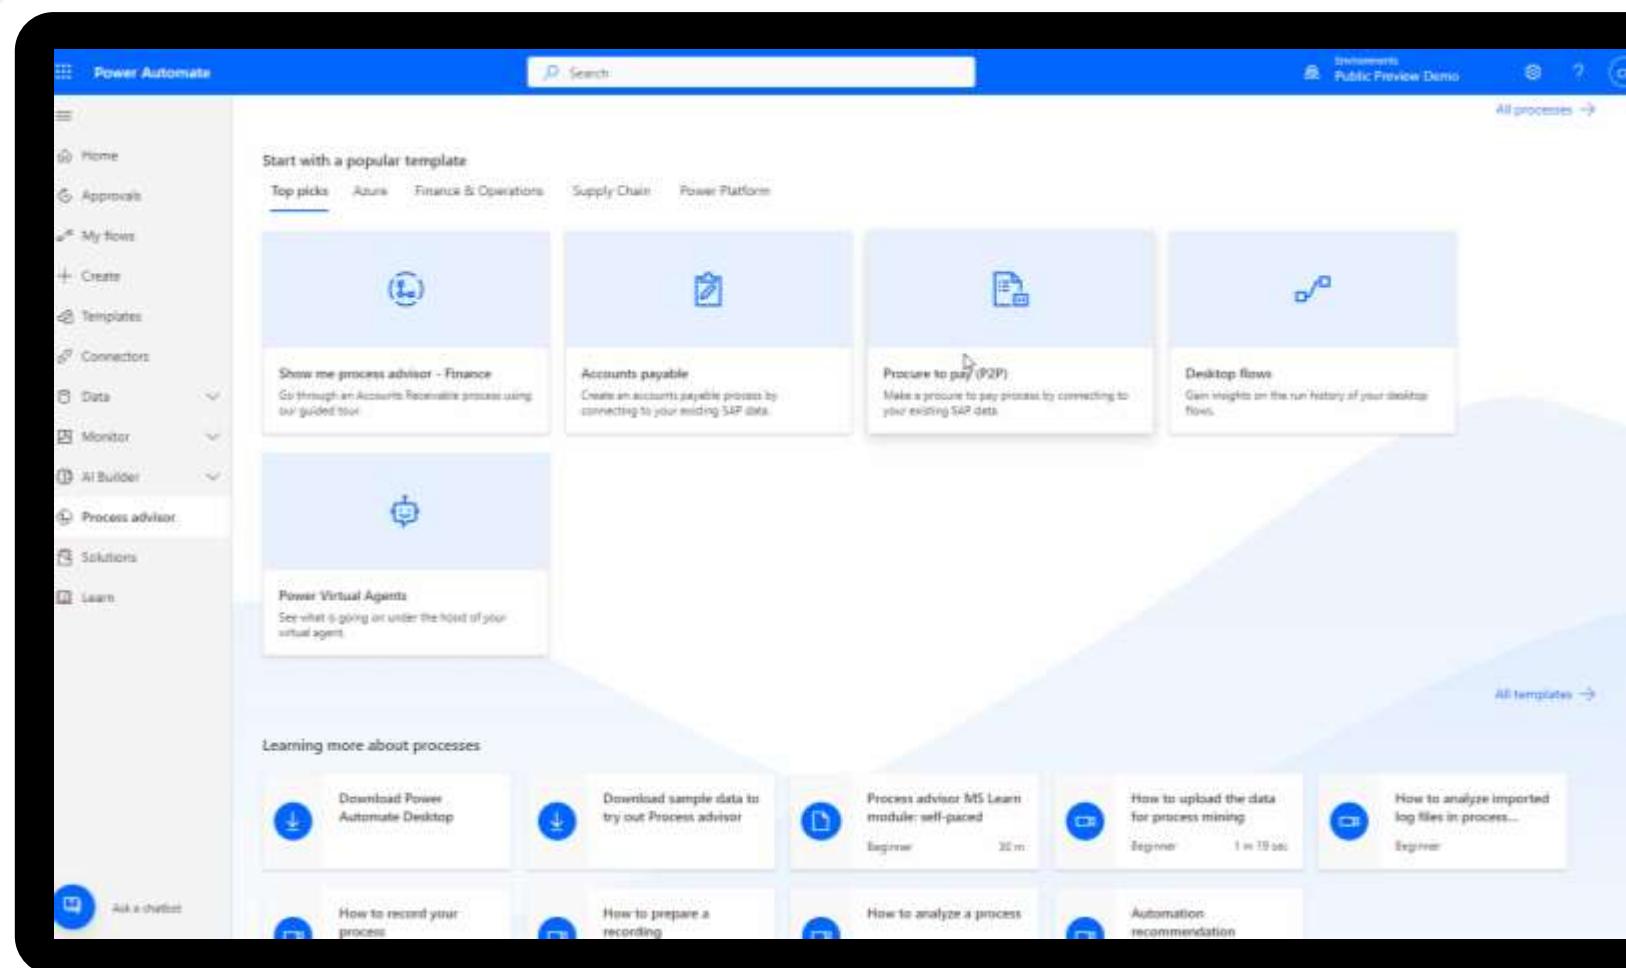

Use out-of-the-box templates for rapid deployment from data ingestion to pre-defined custom reports.

Gain deep insights with powerful features including rework detector, root cause analysis, process compare and custom metrics.

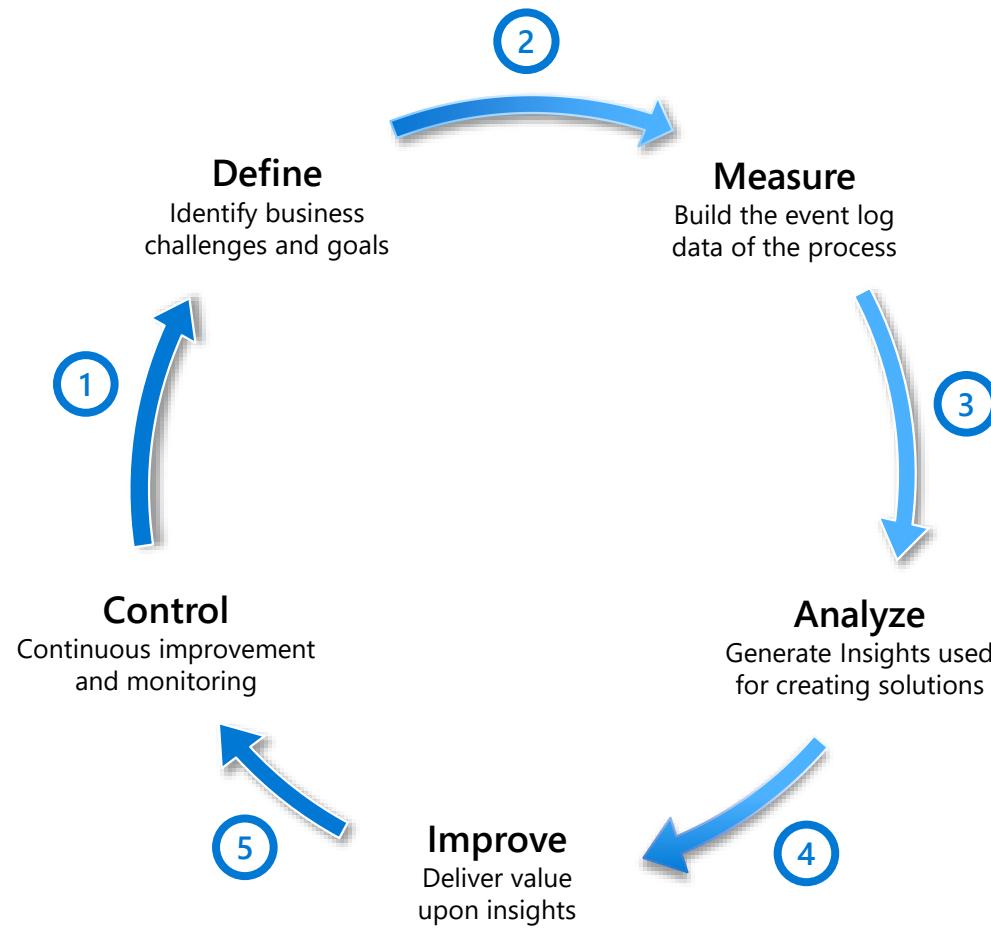

Create views, publish them to [create custom Power BI reports](#) and share across the organization

Seamlessly integrate with Power Automate flows to turn insights into action

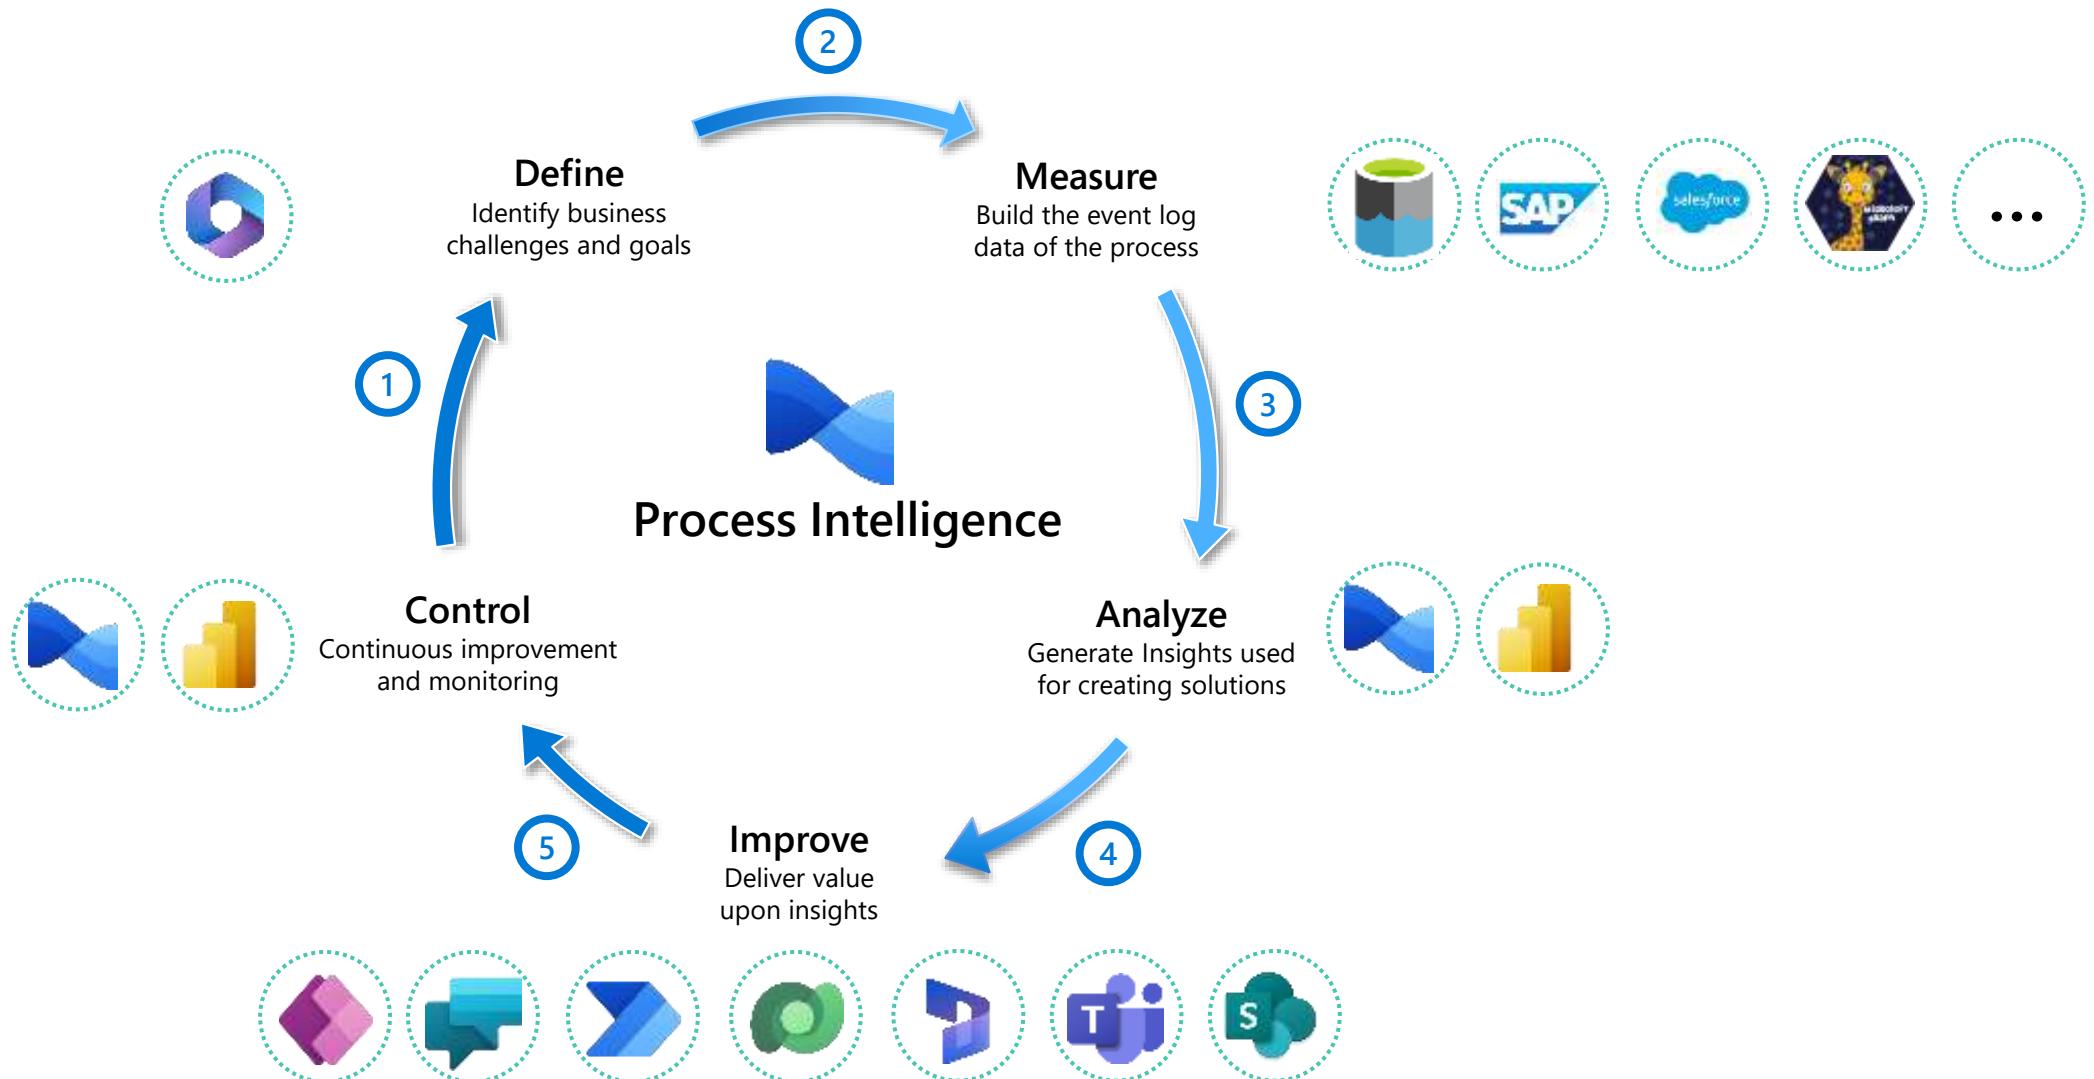

Discover possibilities for [automation of individual workflow](#) with task mining

OPTIMIZE YOUR PROCESSES AND DISCOVER AUTOMATION OPPORTUNITIES

Use-cases

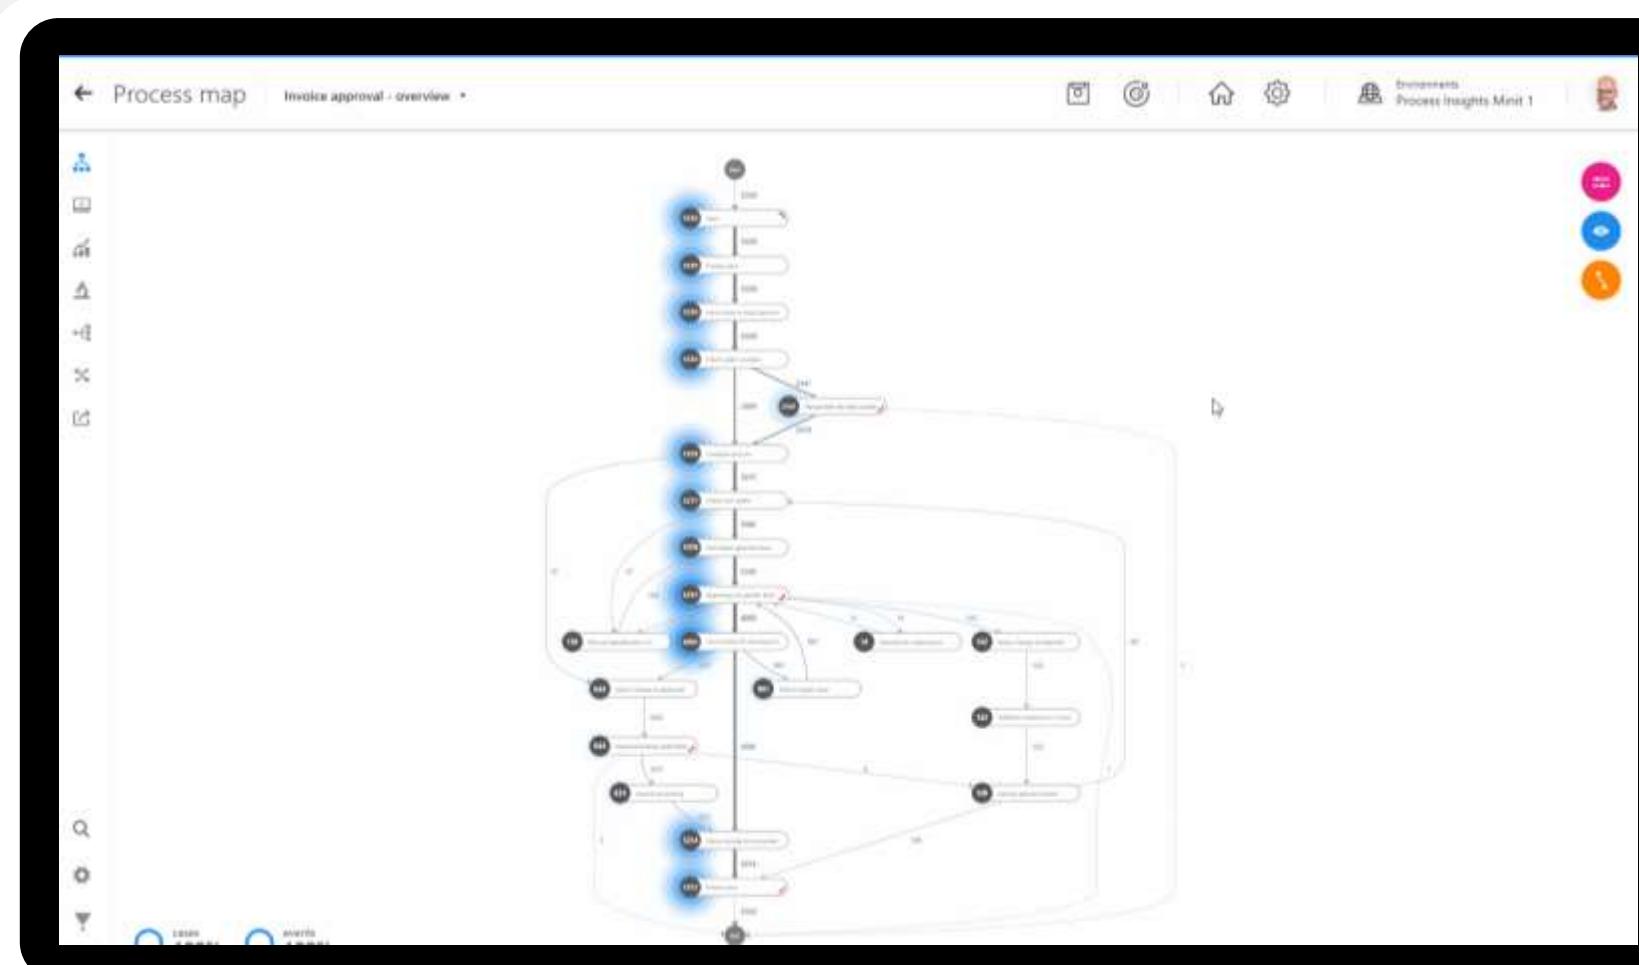

Accelerate your digital transformation efforts with a blueprint for building Cloud flows, RPA, AI and more.

Visualize and analyze your Order to Cash Process (O2C) to see how effectively you convert your products or services into cash.

Avoid automating inefficient processes and continuously monitor to identify process inefficiencies.

Achieve full visibility of your Order to Activation (O2A) process and identify process inefficiencies.

Decrease regulatory compliance risks, improve response time to regulatory questions, spot and fix potential problems.

Process advisor in Power Automate

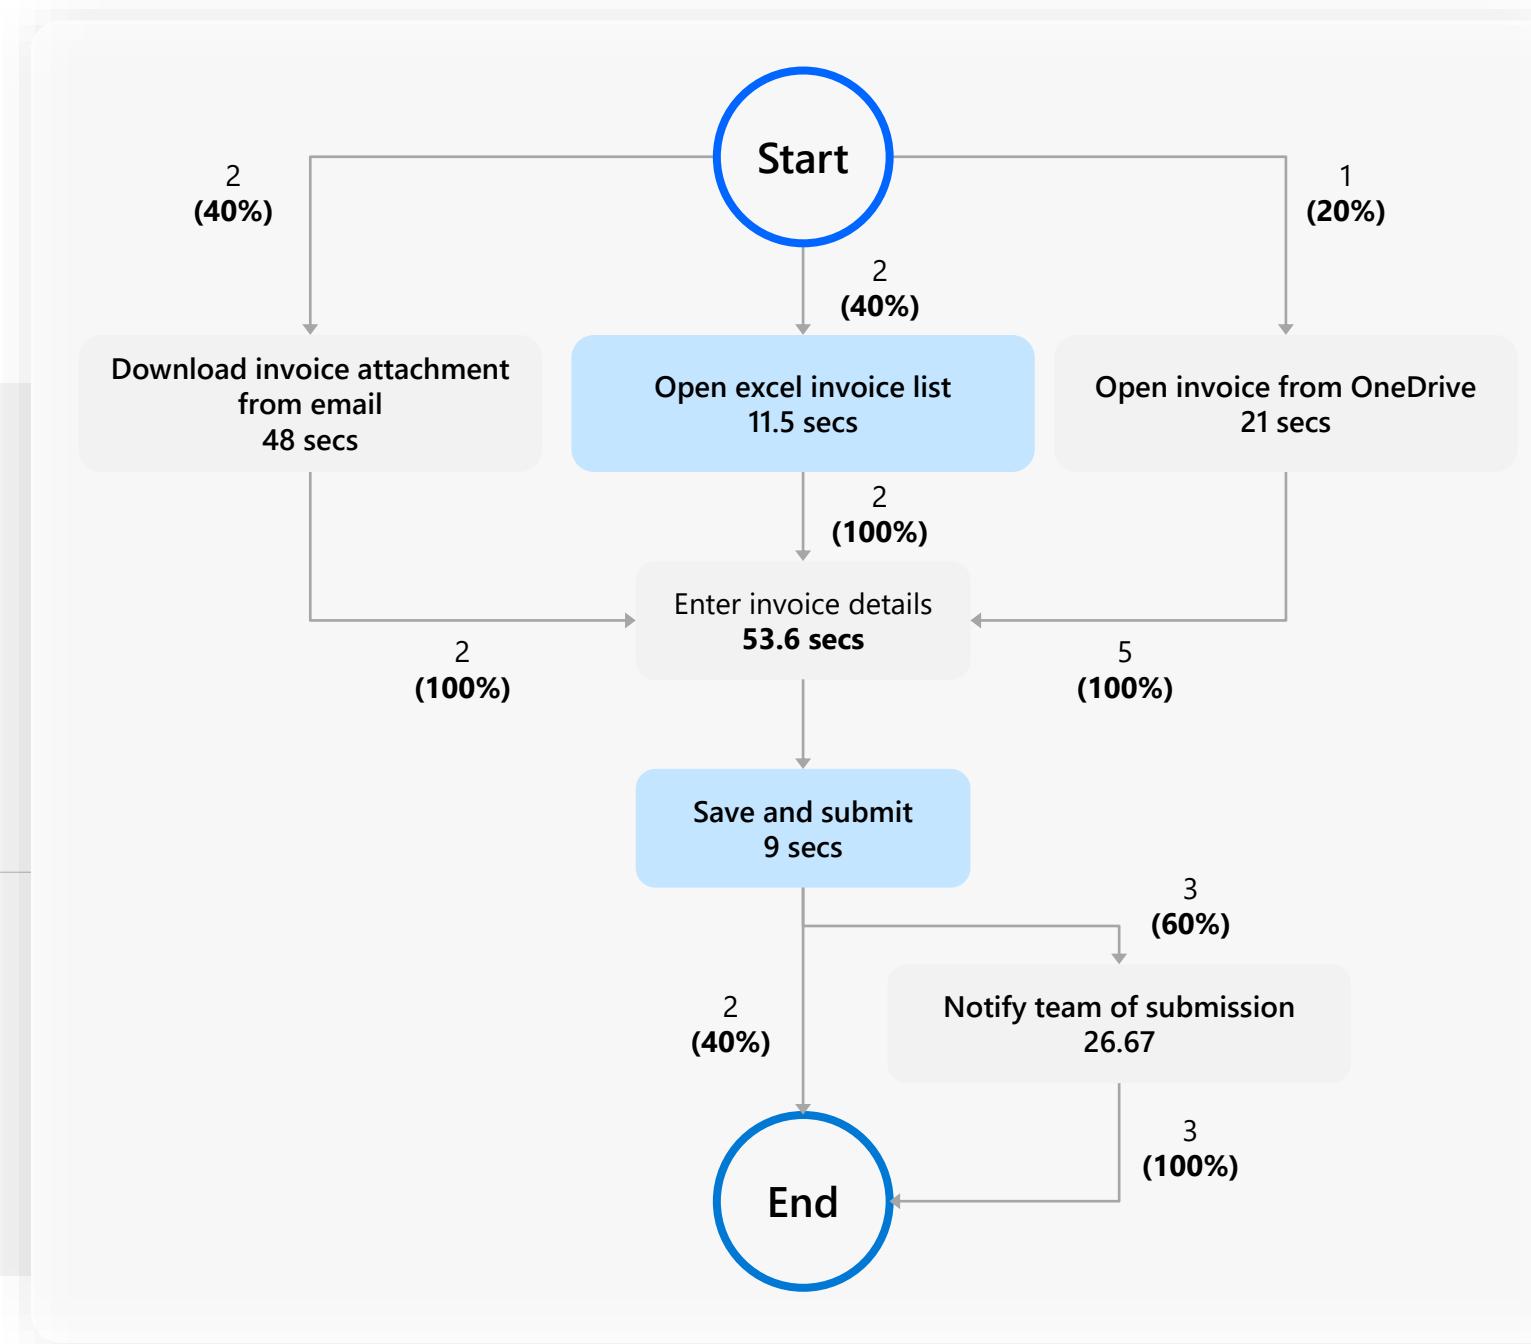

Two powerful capabilities make up process advisor

Process mining

Identify company-wide bottlenecks and inefficiencies in workflows

Task mining

Discover possibilities for automation for individual workflows

Power Automate Process Mining

Key capabilities

Easy-to-use web and desktop experiences

From ingestion to process map and insights in the web, using Power Automate Desktop for task mining to interactive drill-down and set up of custom metrics in the Minit desktop app

Deep Analytics

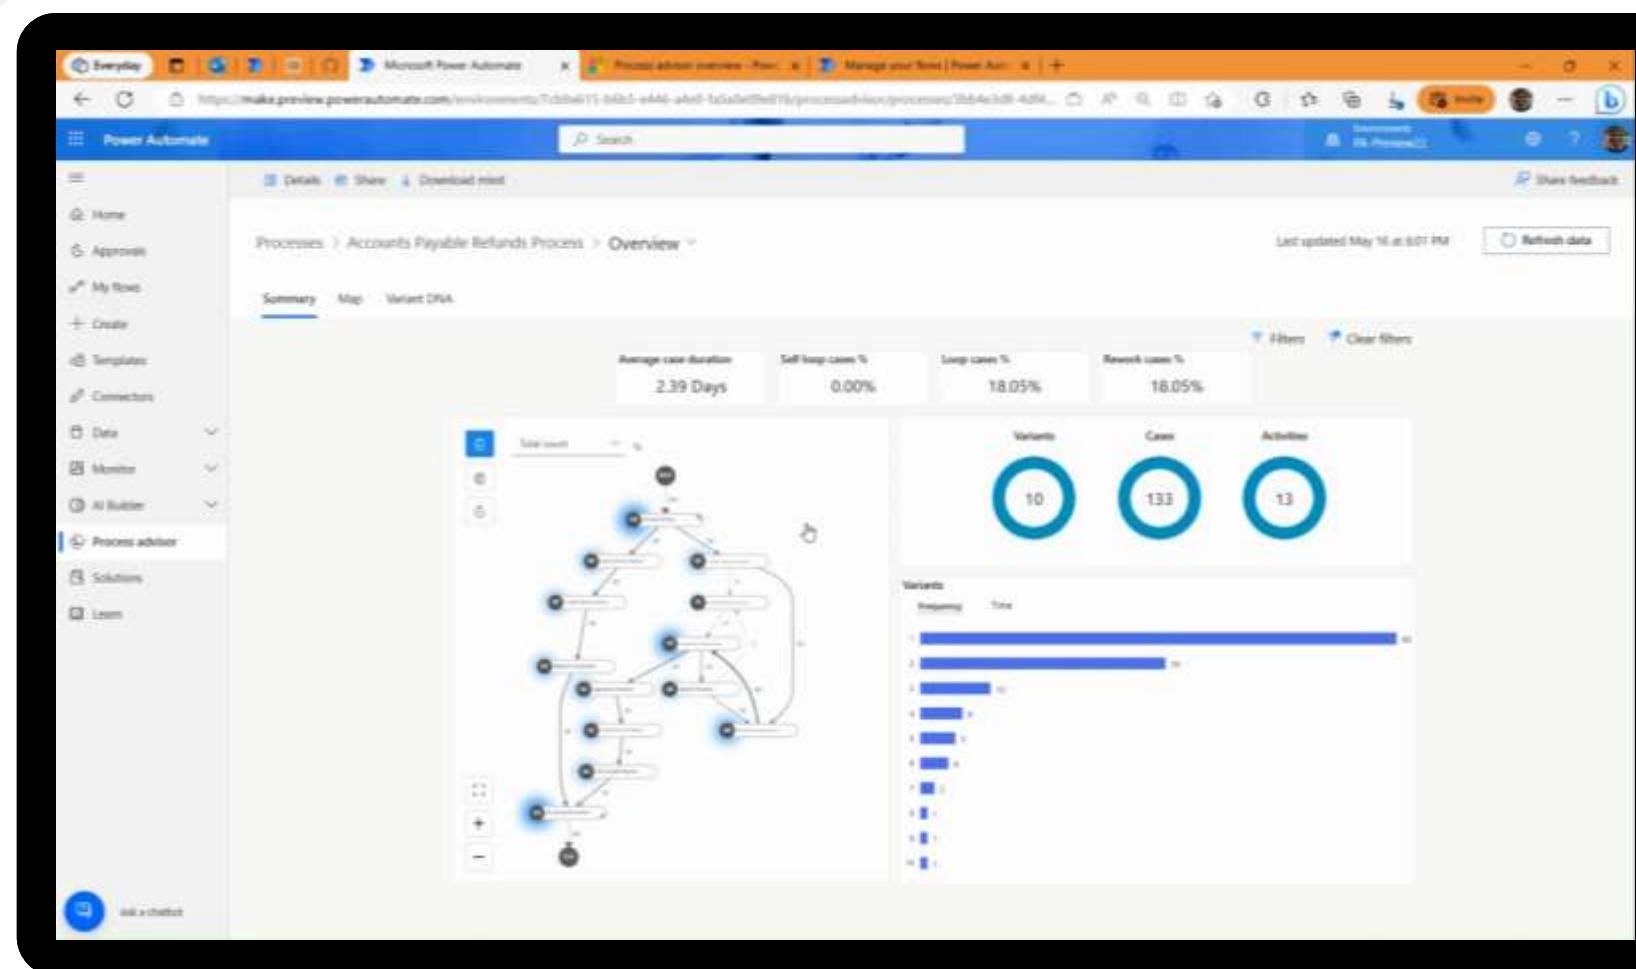

Discover inefficiencies and eliminate them by comparing processes, detecting rework, using AI powered root cause analysis and more

Customizability & Extensibility

From customizing metrics to producing meaningful results and customized reports with Power BI and integration with Power Platform, Dynamics, Azure and M365

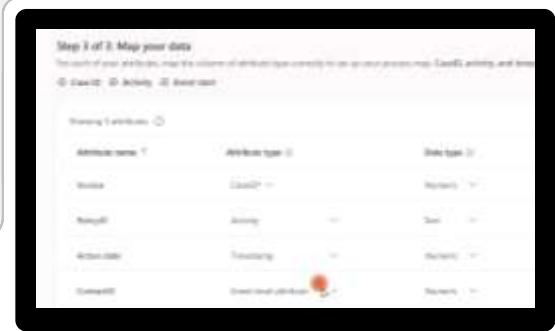

Get started with OOB Templates

Use out-of-box templates such as Finance and Supply Chain, for rapid deployment from data ingestion to pre-defined custom reports

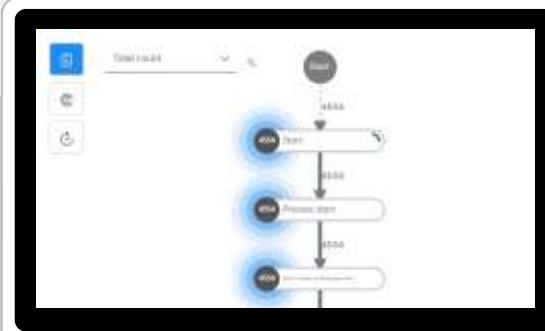

Easy-to-use and Accessible Web & Desktop Experiences

Intuitive experiences ranging from overviews to hands-on deep dives

Data ingestion

Intuitive mapping experience, with out-of-box attributes like resource and financial amount. Schedule your Dataflows refresh and refresh incrementally for efficient ETL

Visualize processes

From a rich process map to hierarchical views and interactive drill downs, switch between overview and deep dive visualizations

AI powered Insights

Use out-of-box recommended KPIs, visuals, and filter options to uncover efficiencies and actions to eliminate them

Process Mining specific Power BI visuals

Use Power BI visuals specifically created for Process mining analysis to broadly share process insights

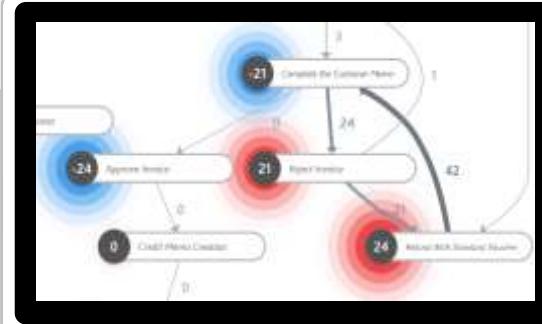

Deep Analytics

Power your analysts with data on your processes

Process Compare

Visualize and analyze processes to find best performers by comparing them against real-life or simulated versions, as well as their BPMN model

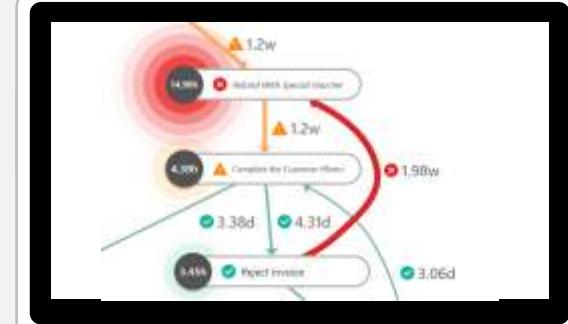

Rework Detector

Find unnecessary rework and eliminate it by analyzing the frequency and scale of rework, and investigate which activities trigger and end it

AI powered Root-Cause Analysis

Compute attributes and the root causes of problems your process experiences to uncover hidden connections and causalities

Business alerts & Rules monitoring

Score process performance and be alerted if operational KPIs and standard are met, by setting up pre-set rules

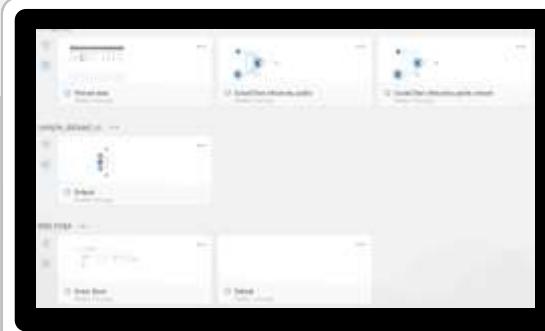

Customizability & Extensibility

Easily customize your reports and integrate with Power Platform

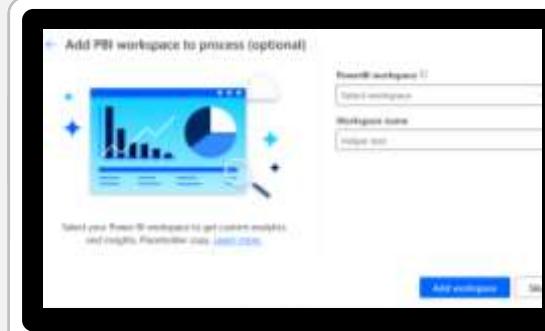

Custom Metrics

Create, edit and customize metrics over process data to produce results and insights tailored to your processes and meaningful to you

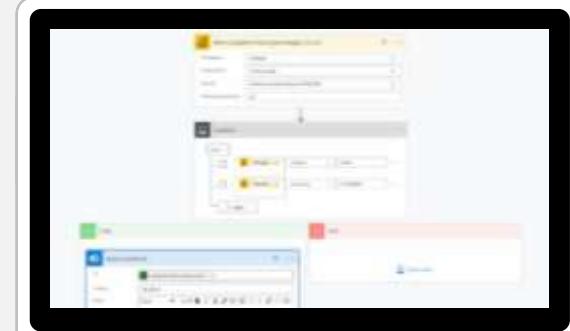

Custom Views

Create custom analytical views to reflect different business contexts/viewpoints and publish them to Power BI as reports

Publish to Power BI

Publish reports to your own Power BI workspace. Use your custom views and KPIs to tailor the PBI report and share them broadly across the organization.

Power Platform and Microsoft ecosystem

Set triggers when KPIs are breached or process rules are violated. Leverage the multiple actions in Power BI and Power Automate, inform your team in Outlook and Teams

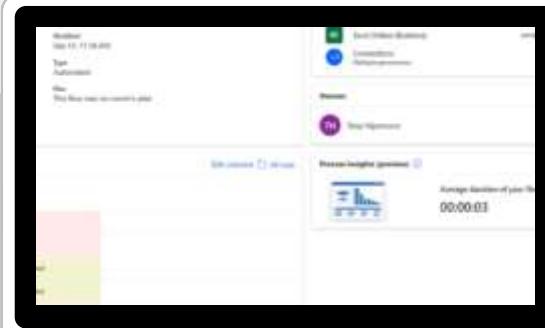

Out-of-Box Templates

Rapidly ingest data and get started with templates

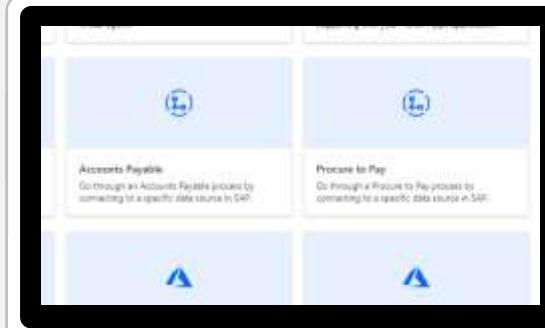

Out-of-Box Ready to Use

Use several out-of-box templates allows rapid deployment from data ingestion to pre-defined custom reports, all in one package

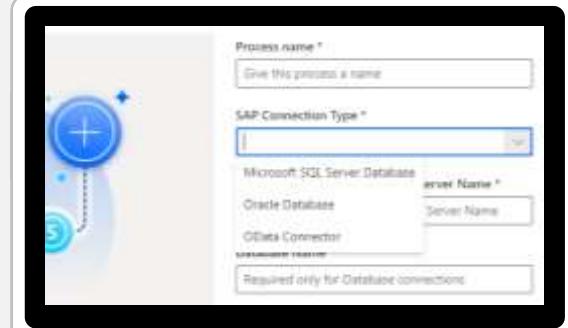

Microsoft data use cases

Templates for Power Platform (Power Automate Desktop, Power Apps and Power Virtual Agents) and Azure (DevOps, Logic Apps, Durable Functions and Bot Framework)

Financial Use Cases

Get started with broadly applicable financial use cases such as using Accounts Payable and Procure to Pay

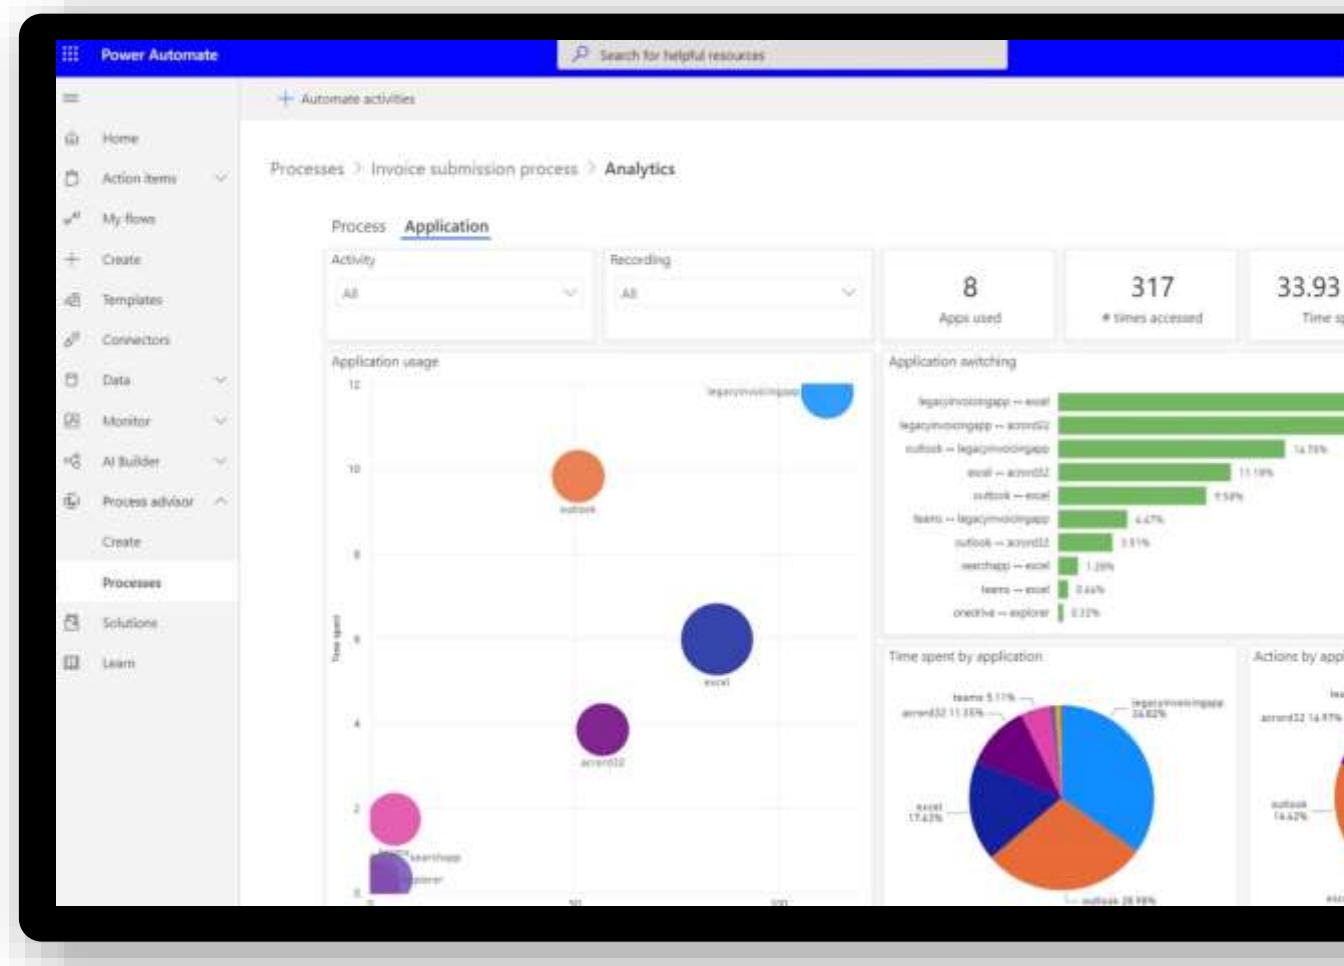

Easily Connect to SAP

For preview we are concentrating on making it easy to connect to your SAP data by supporting direct connectors and handle any required data transformation for you.

Take the guesswork out of automation

Task Mining

- 1 Capture **detailed steps** for **tasks** performed on users' desktops
- 2 Gain **insights** into task execution, **identify** common mistakes, and **pinpoint** what can be **automated**
- 3 **Optimize** business processes identifying **inefficiencies** and **bottlenecks** and **reducing costs**
- 4 **Foster** a culture of **continuous improvement** where employees are encouraged to optimize their work processes.

Take the guesswork out of automation

Process analytics (preview)

- 1 Gain **valuable insights** and **optimize** your **cloud flows**
- 2 Visualize your flow's **performance** and monitor for **performance drifts**
- 3 Identify **bottlenecks** and **opportunities** for **improvement**

The screenshot shows the 'Power Automate' interface with the 'Flows' section selected. A specific flow named 'Process sales orders' is displayed. The flow details include:

- Details:** Name: Process sales orders, Owner: Ios Fernandes, Status: Off, Created: Apr 21, 06:10 AM, Modified: May 6, 03:15 AM, Type: Automated, Plan: This flow runs on owner's plan.
- 28-day run history:** A table showing the last seven runs of the flow. All runs are listed as successful.

Start	Duration	Status
Apr 21, 06:16 AM (3 wk ago)	00:00:34	Succeeded
Apr 21, 06:16 AM (3 wk ago)	00:00:26	Succeeded
Apr 21, 06:16 AM (3 wk ago)	00:00:21	Succeeded
Apr 21, 06:16 AM (3 wk ago)	00:29:11	Succeeded
Apr 21, 06:16 AM (3 wk ago)	00:01:25	Succeeded
Apr 21, 06:16 AM (3 wk ago)	00:00:54	Succeeded

On the right side, there are sections for 'Connections' (Approvals, Microsoft Dataverse, Excel Online (Business), Connections) and 'Owners' (JK, MF). A 'Process insights (preview)' section displays a chart with the average duration of 00:08:02.

Automate business processes

Accelerate automation development with low-code and AI

“

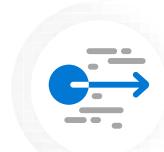

I've learned about my processes; now how do I automate?

Create a flow

Test your flow and debug

Share your flow with others

Automate with flows

Cloud flows

Automate modern apps, services, and data with APIs in the cloud

Powered by **digital process automation** (DPA)

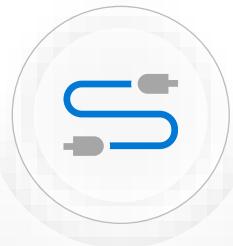

Desktop flows

Automate legacy systems on a desktop or virtual machine (VM)

Powered by **robotic process automation** (RPA)

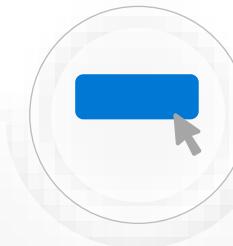

Bridge the gap with API **connectors** and UI **actions**

Connectors

Prebuilt: Connect to over 1,000+ prebuilt API connectors

Custom: Develop your own API connectors for personalized solutions

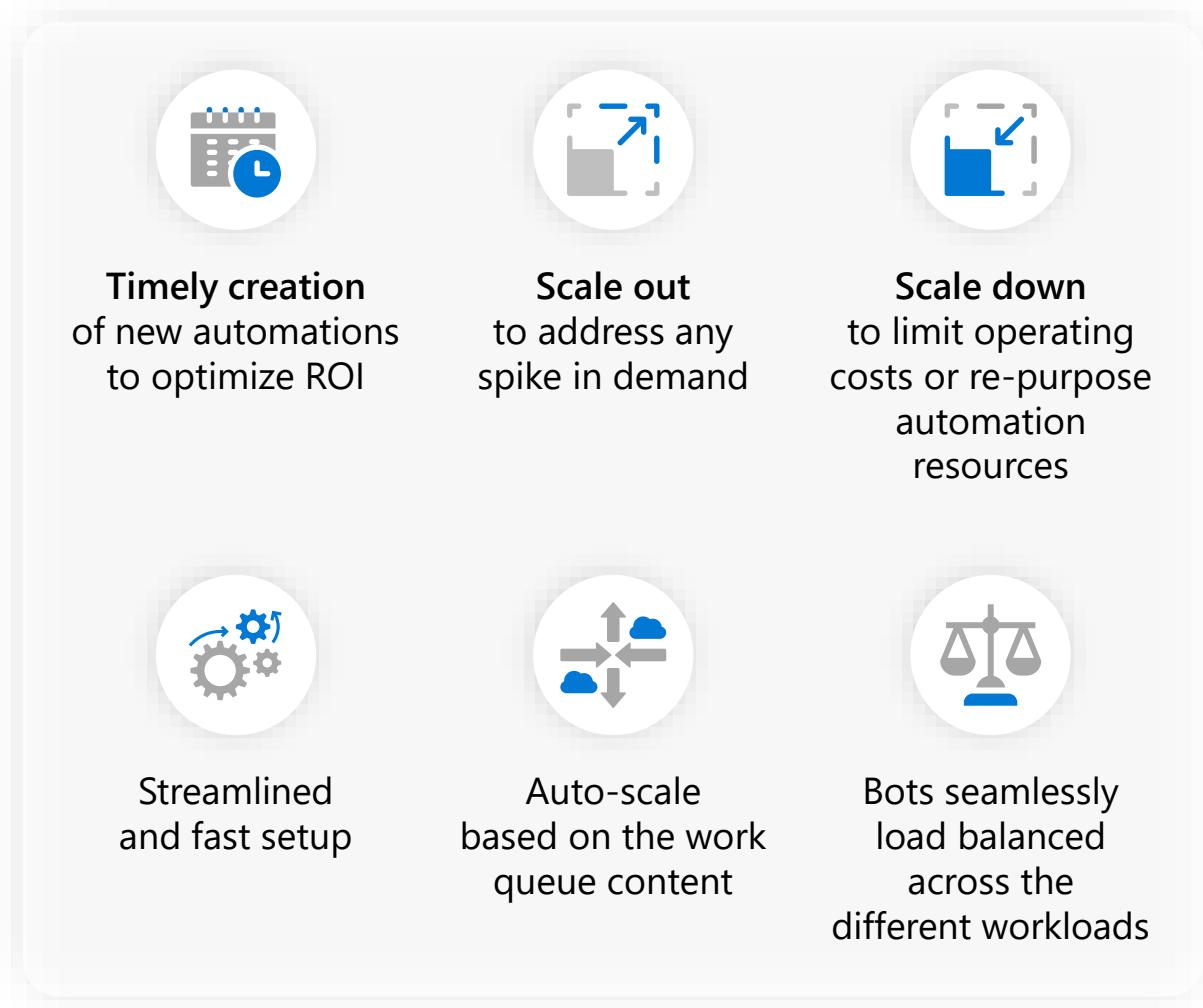

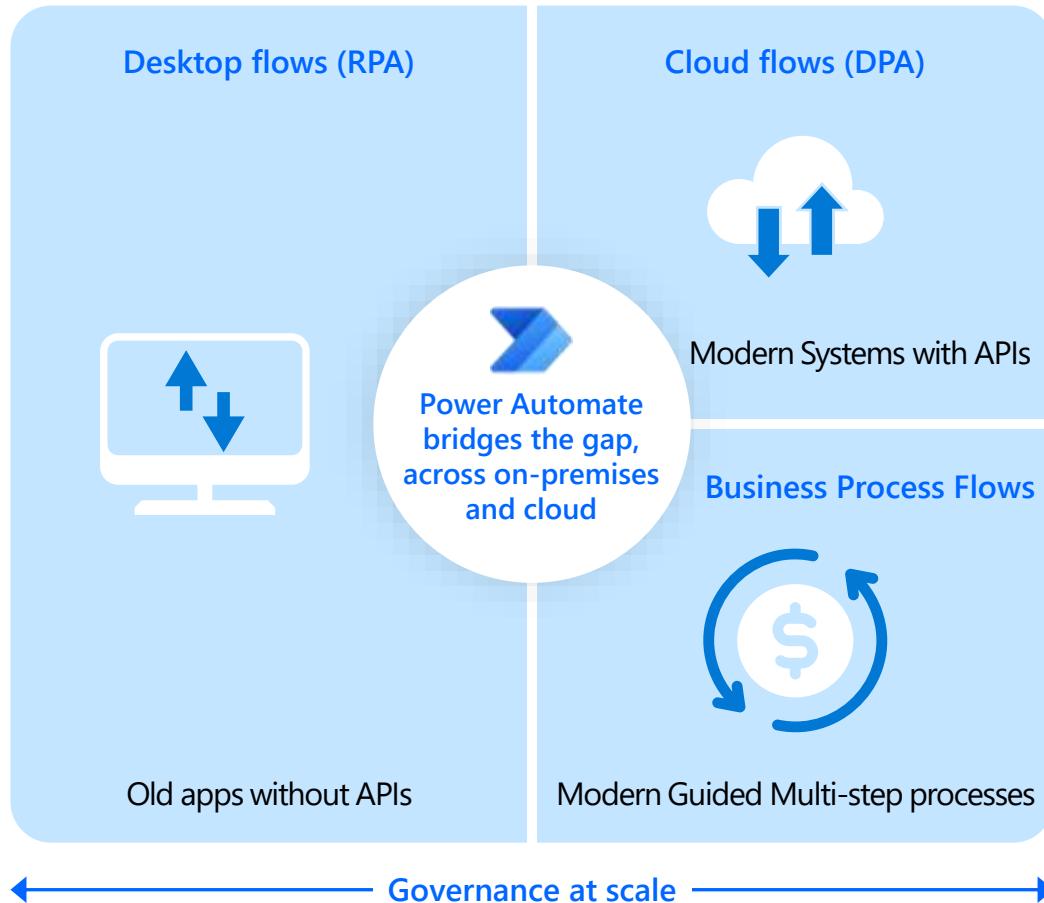

Actions

Prebuilt: Choose from hundreds of drag-and-drop UI actions

Custom: Develop your own UI actions with the actions SDK (preview)

Automate across the old and the new

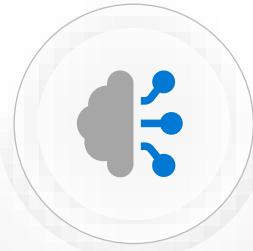

Enhance automation with AI

Make your automated workflows even more intelligent

[AI Builder](#)

[Artificial intelligence \(AI\)](#)

[Learn more >](#)

[AI Builder in Power Automate](#)

[Document Automation](#)

[How it works](#)

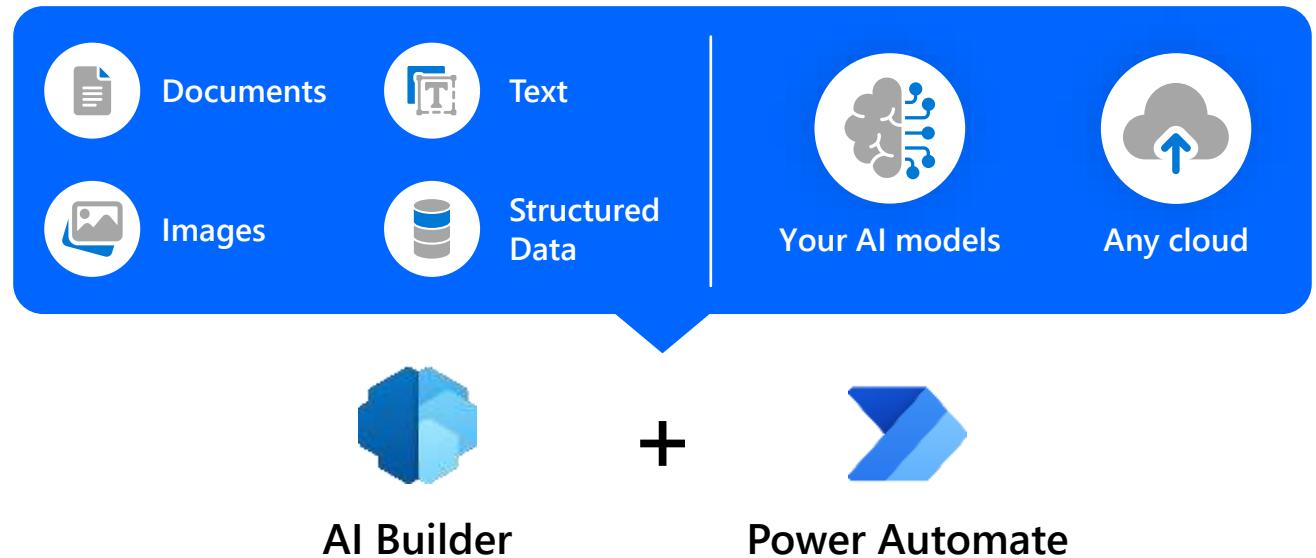

AI Builder in Power Automate

Build intelligent experiences

Invoke an AI model with specific workflows, data, and AI Builder

Embed AI into processes without the help of a data scientist

Build robust, dynamic automations

 Automate customer application processing	 Automate leads entry	 Automate supplier invoice processing	 Automate expense reports	 Digitalize text from a picture
 Categorize user feedback	 Identify language of text	 Translate support requests	 Extract insights from product reviews	 Identify and route customer requests
 Identify sentiment from social media posts	 Identify fraudulent transactions	 Predict customer churn	 Classify and index images based on their content	 Automate inventory control

Document Automation

Automate your documents

How it works

Power Automate and the Power Platform provide a complete solution for processing documents at scale that includes AI powered data extraction, manual validation, process orchestration, pipeline monitoring, and more.

Receive documents

Receive documents from your customers

Extract

Extract information from the documents

Validate

If needed, a human can confirm or correct the extracted data

Export

Export the extracted data to your ERP or to any other data storage of your choice

Monitor

Supervise your end-to-end process with the provided monitoring application

Document Automation

Increase efficiency through intelligent automated workflows powered with AI

The screenshot shows a user interface for document automation. On the left, a sidebar lists options: "Choose document type" (selected), "Choose information to extract", "Add collection of documents", "Tag documents", and "Model summary". The main area is titled "Select the type of documents your model will process" and offers two choices: "Structured documents" (selected) and "Unstructured documents". A detailed description explains that structured documents have a fixed layout where fields like dates, names, and amounts are consistently positioned. Examples include invoices, purchase orders, and tax documents. Below this, there's a preview section showing a sample invoice with fields like "Customer ID", "Invoice Date", "Due Date", "Invoice Number", "Line Item Details", and "Totals". To the right, a "Quick tips" panel provides links for "Unstructured documents limitations" and "Still unsure?". The top right corner shows the status "Document Processing 1/24/2023, 3:09:42 PM" and "Save and close".

Transform natural language to Automation

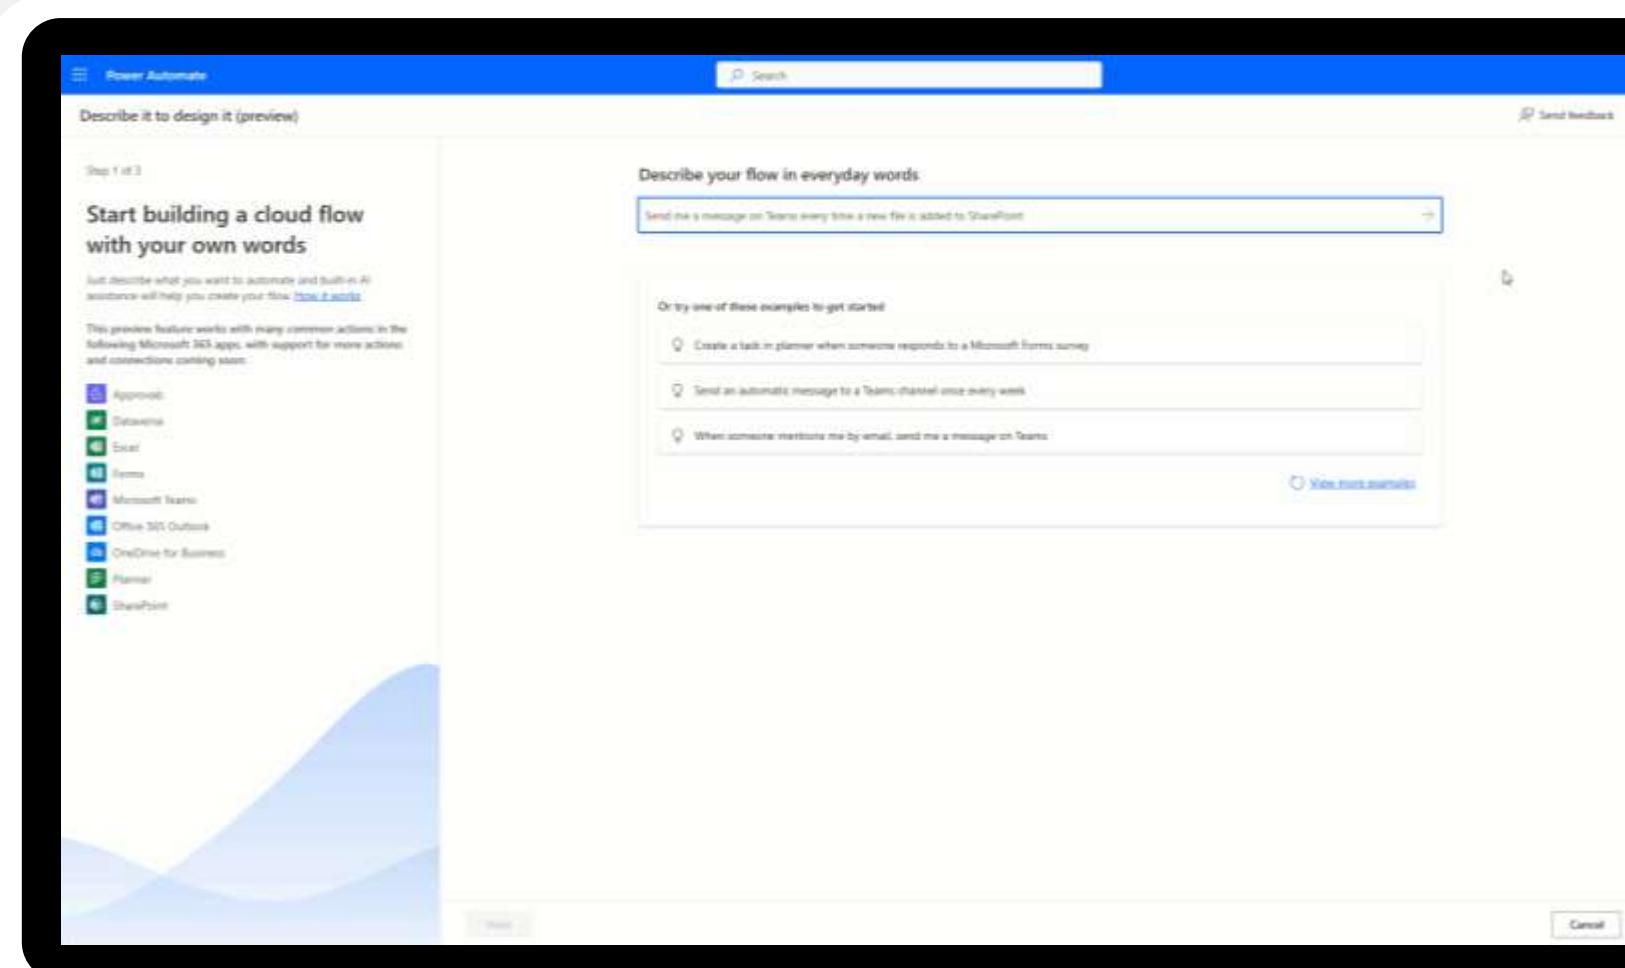

Bring ideas to life with AI powered automation development

Now you can **describe what you want** to automate in a sentence, and an AI-based copilot will build your flow in seconds

This new way to create flows runs on OpenAI Codex, an AI model descendant of GPT-3 that can **translate natural language to code**, in this case, Power Automate cloud flows

This is the same technology behind GitHub Copilot and Power Apps Ideas (preview)

At launch, Microsoft 365 connectors will be supported with **more coming in the future**

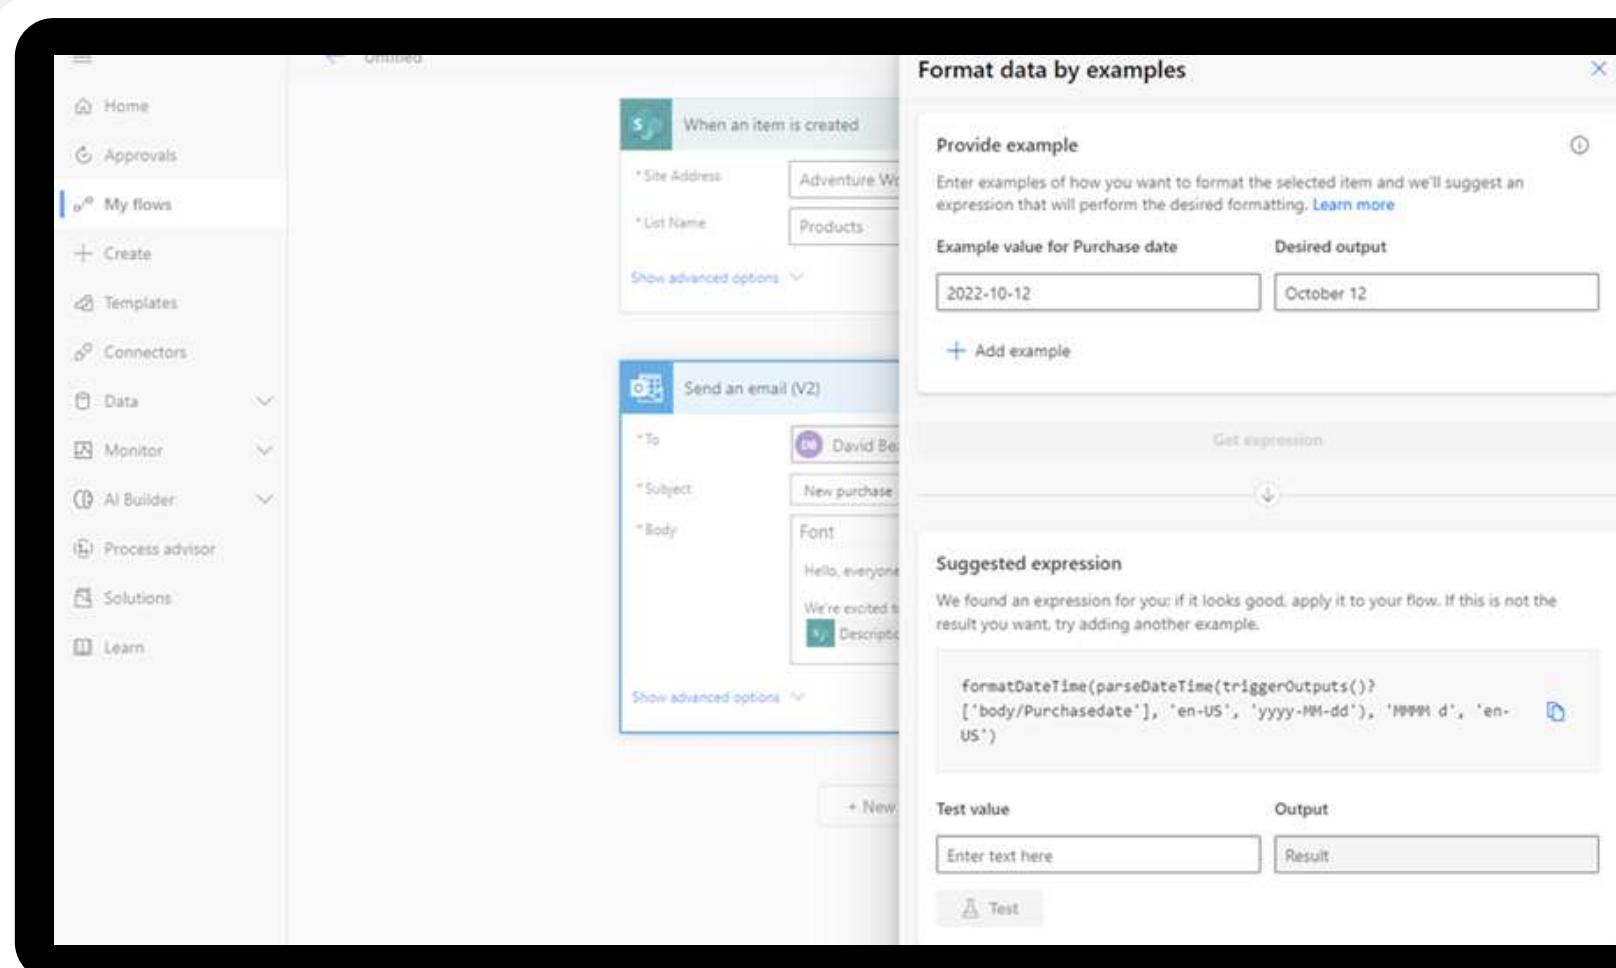

Format data by examples

Bring ideas to life with AI powered app development

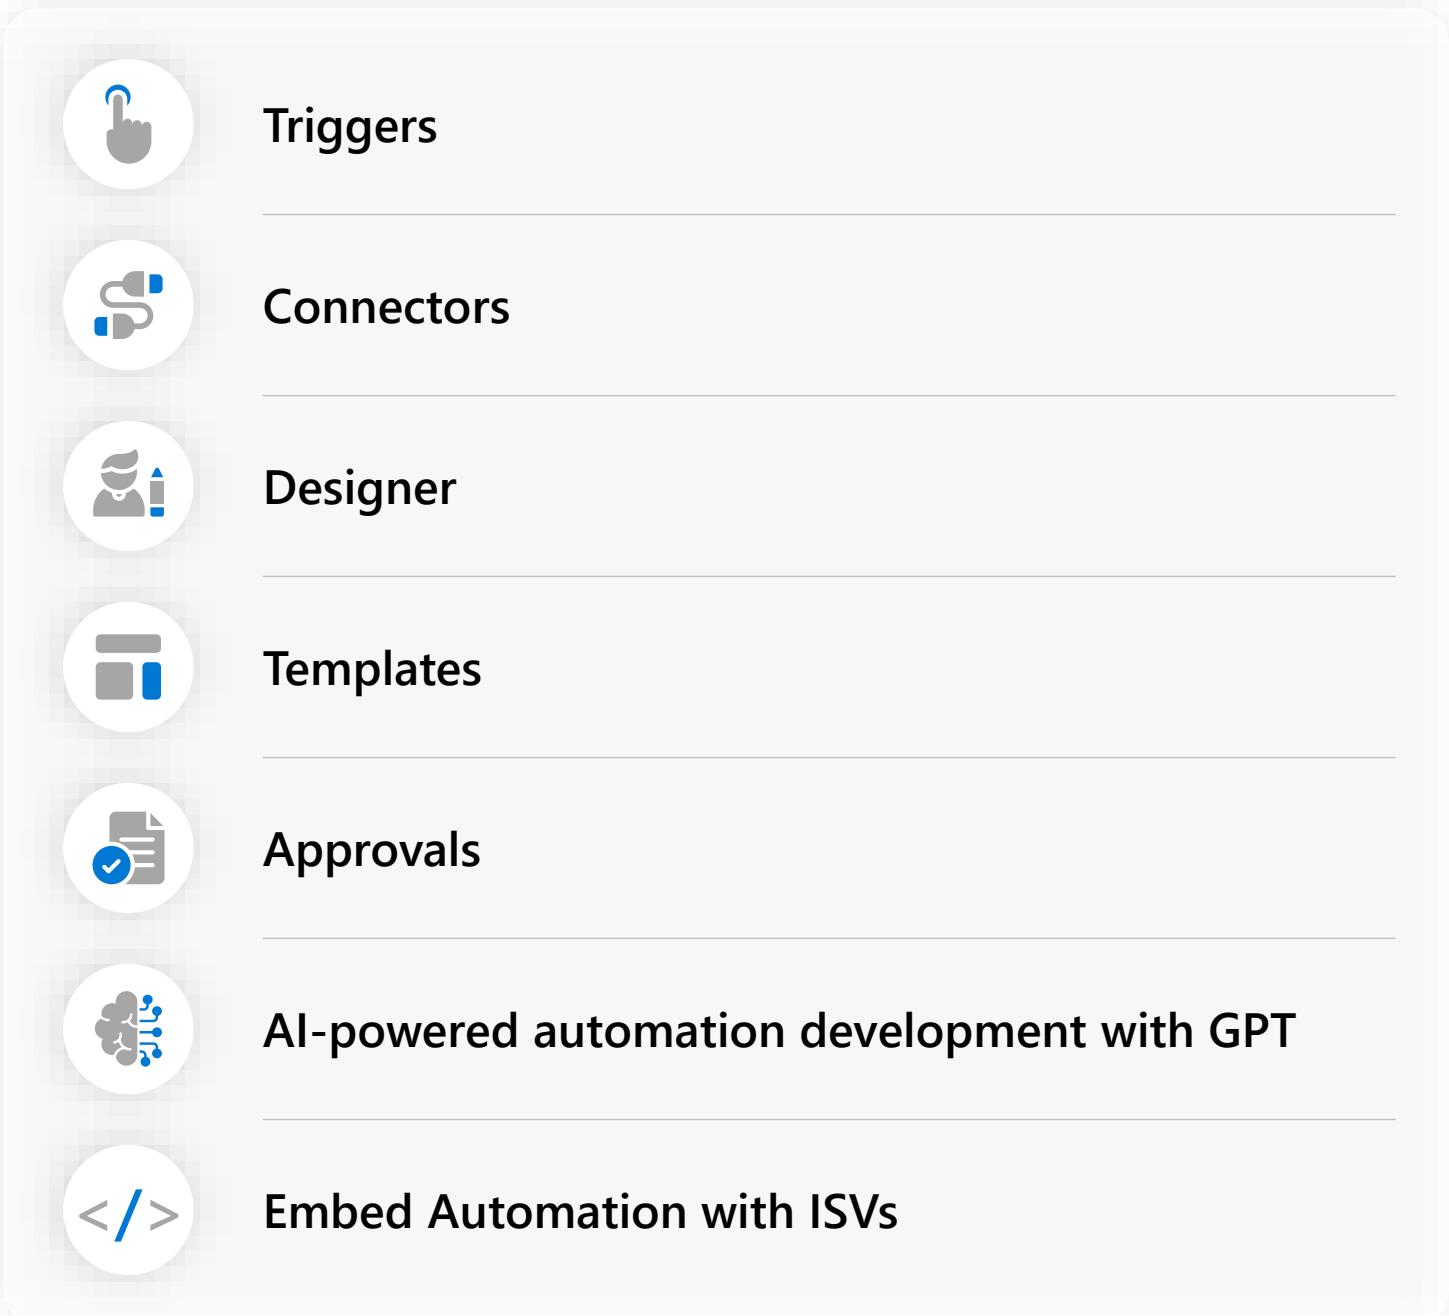

Now, it's simple for users to format data by examples with AI assistance

When you want to format text, dates, and numbers within your cloud flow, you can just provide examples of the desired output format and the copilot will automatically generate the expression formula to use

Cloud flows

Digital process automation
(DPA)

A closer look at cloud flows

Automate between cloud-based apps, services, and data using API connectors and hundreds of prebuilt templates

Triggers

Automated

Run a cloud flow when something happens

Instant

Run a cloud flow manually

Scheduled

Run a cloud flow on a schedule

Approvals with Power Automate

Create, manage and share approval processes across the organization

Connectors

Within Power Automate you can create a new approval flow via a trigger from a system driven event from one of the **1000+ connectors or add your own LOB connector**

Storage

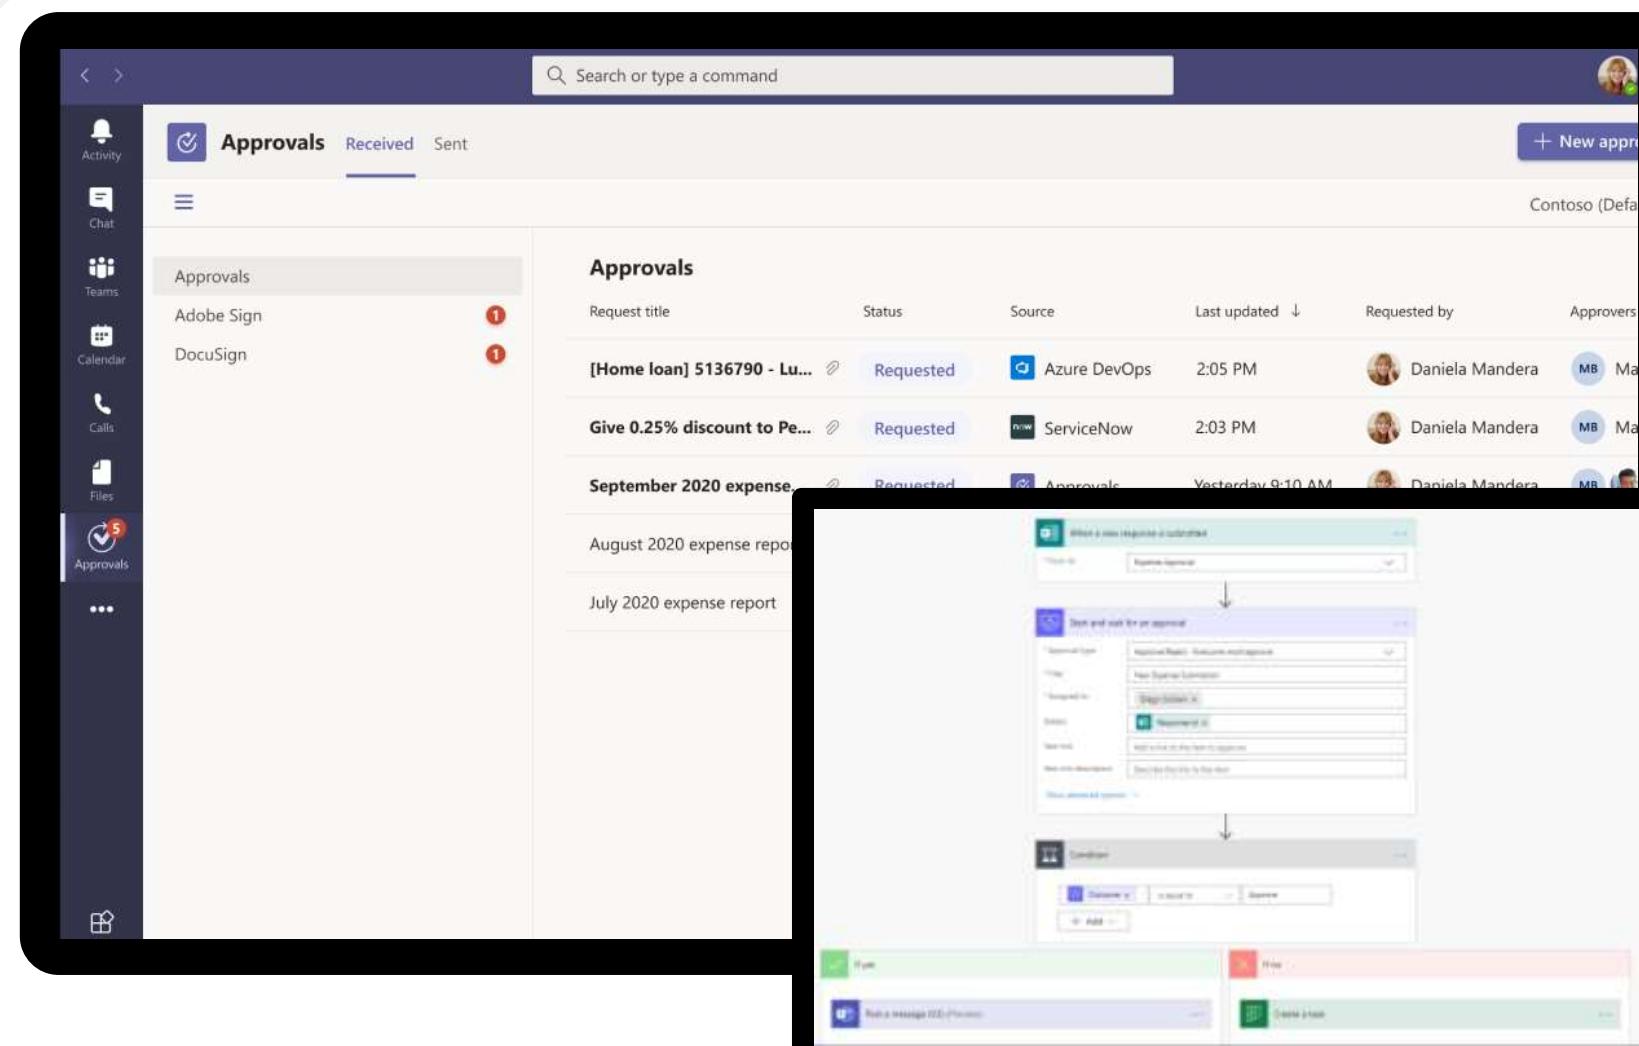

All Approvals are **stored in Dataverse** where the **admins have full access**, and can configure policies and manage Approval's storage, rollover, and policy in Dataverse

Retention

Approvals **last forever** or whatever policy the Admin has set

Security

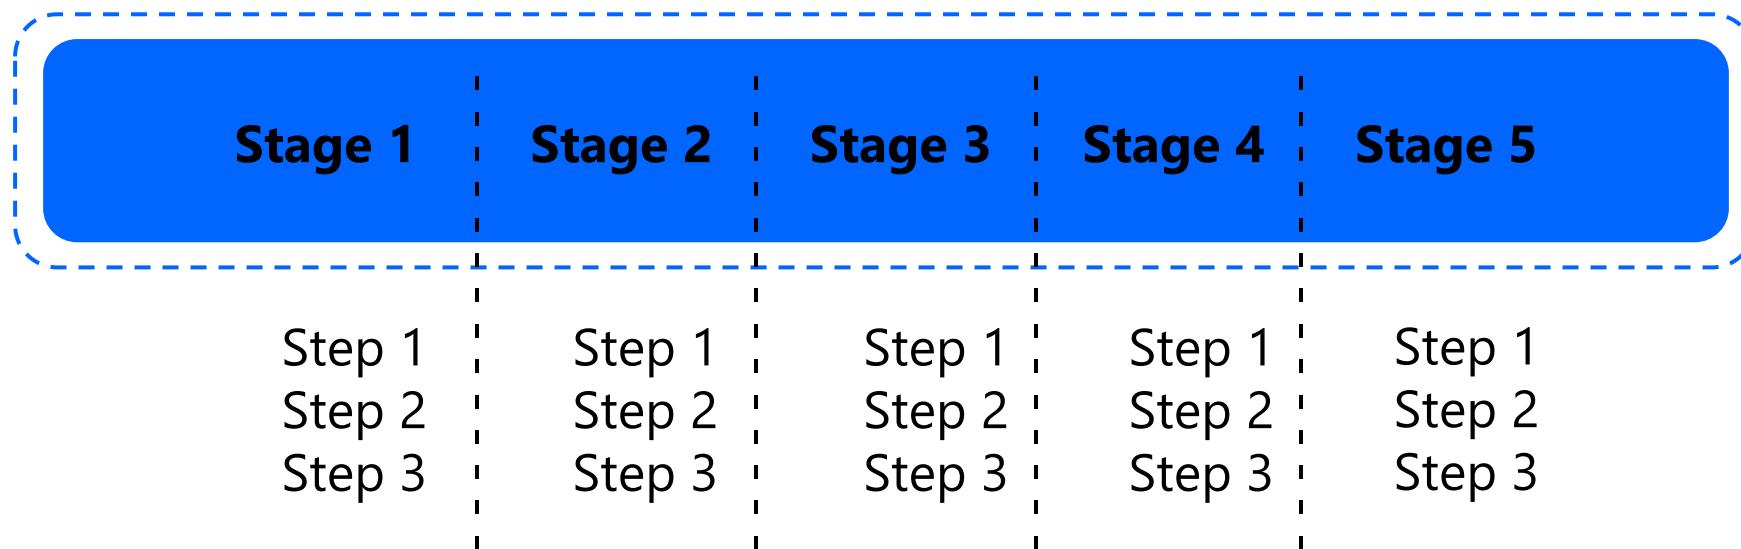

Only the **requestor, approver, and the Global Tenant Admin** can access the data

Business process flow

Automate multistep, guided processes

A *business process flow* automates a multistep business process using Microsoft Power Apps to create an automated visual, guided experience.

Business process flow

Automate multistep, guided processes

The screenshot displays the Microsoft Dynamics 365 Project Operations interface. At the top, the title bar shows "Dynamics 365 Project Operations". The main area is titled "Professional Services Engagement" under the "Project" section. A horizontal timeline at the top indicates the project's status from "New (37 Min)" to "Closed". Below the timeline, there are several tabs: "Summary", "Tasks", "Team", "Resource Assignments", "Resource Recconciliation", "Estimates", "Tracking", "Sales", "Task Billing Setup", "Expense Estimates", and "Related". The "Summary" tab is selected. The "General" section contains fields for Project ID (P-001024-0), Name (Professional Services Engagement), Description (Professional Services Engagement), Owning Company (USPM), Customer (Altium Corporation), Calendar template (PST 8 hrs), Currency (USD), Contracting Unit (Contoso Software US), and Project Manager (Molly Clark). The "Estimates" section provides details like Estimated Start Date (3/29/2021), Actual Start (—), and Actual Finish (—). The "Actuals" section shows values for Estimated Labor Cost (\$1,110,952.00), Actual Labor Cost (\$0.00), Estimated Expense Cost (\$52,010.00), Actual Expense Cost (\$0.00), Estimated Total Cost (\$1,162,962.00), and Actual Total Cost (\$0.00). The "Status" section includes fields for Overall Project Status (—), Comments (—), and Status Updated On (3/29/2021). The left sidebar shows navigation links for Home, Record, Project, My Work, Dashboards, Time Entries, Expenses, Approvals, Projects, Schedule Board, Resource Utilization, Resources, and Roles. The bottom navigation bar includes "Projects" and "Active".

Desktop flows

Robotic process
automation (RPA)

Attended vs Unattended RPA

Logical architecture

Connect to legacy and modern systems

Visual Designer

Recorder

Exceptional handling

What are desktop flows?

Desktop flows enable you to automate repetitive tasks using software robots that act like humans.

It opens the world of automation to include software that's old or new, on-premises or in the cloud.

Employees focus on high-value activities, improving compliance and job satisfaction while removing human error.

Focus on what's most important.
Automate the rest.

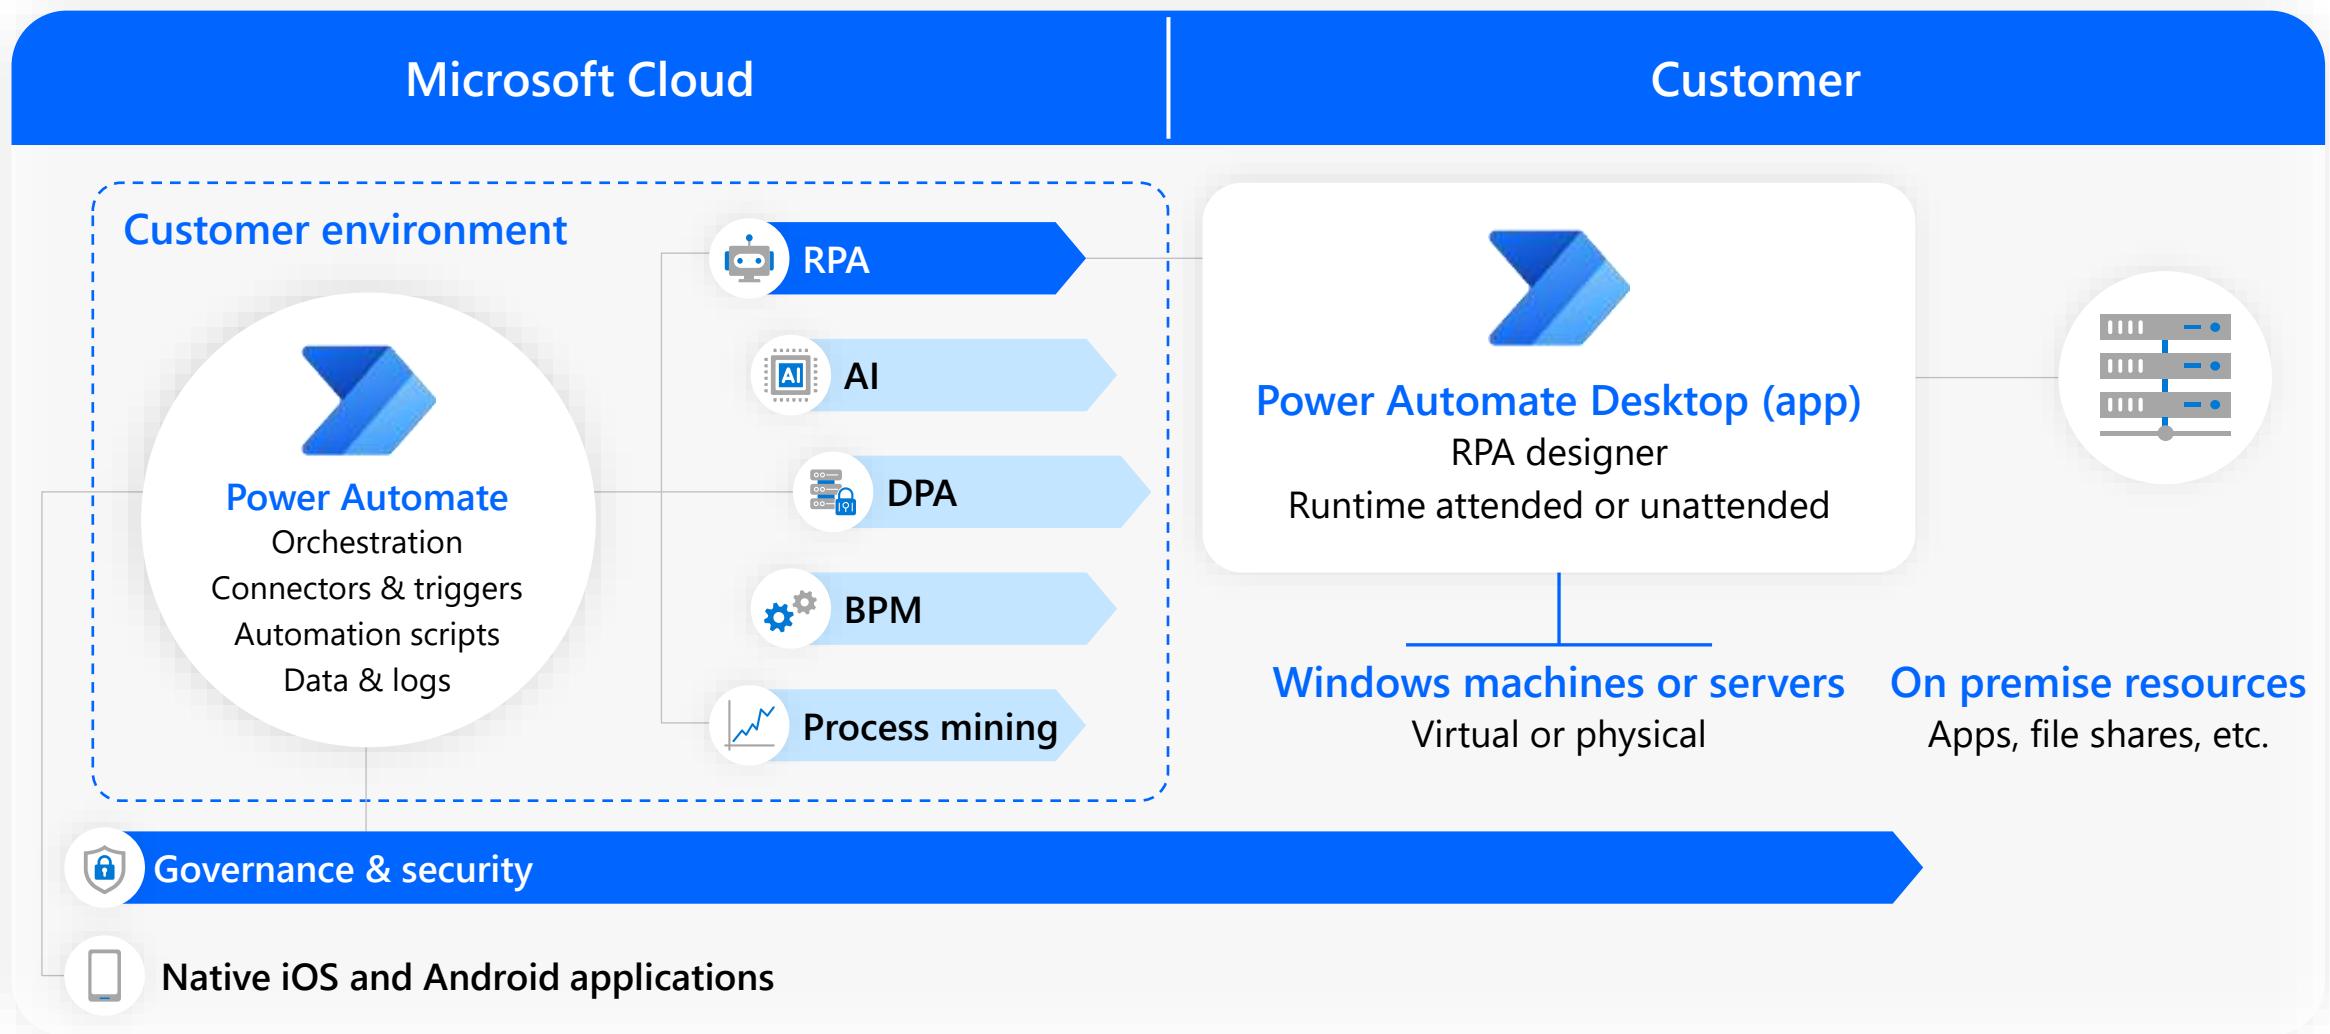

Robotic Process Automation (RPA)

Automate your desktop by creating software robots that act like humans interacting with the user interface (UI)

	Attended	Unattended
Overview	Drive efficiencies and automate manual tasks across desktop and web	Accelerate the automation of high-volume and tedious tasks without lifting a finger
Scenario	On-demand task automation	Automate company processes at scale
Audience	Citizen developer in business unit	Automation specialist in a Center of Excellence dedicated to RPA
Requirement	User signed in on their device/human initiated	Jobs on dedicated machines/ robots do the work
Availability	Power Automate for Windows 10/11 Power Automate per user with attended RPA	Unattended RPA add-on

Desktop flows: Logical Architecture

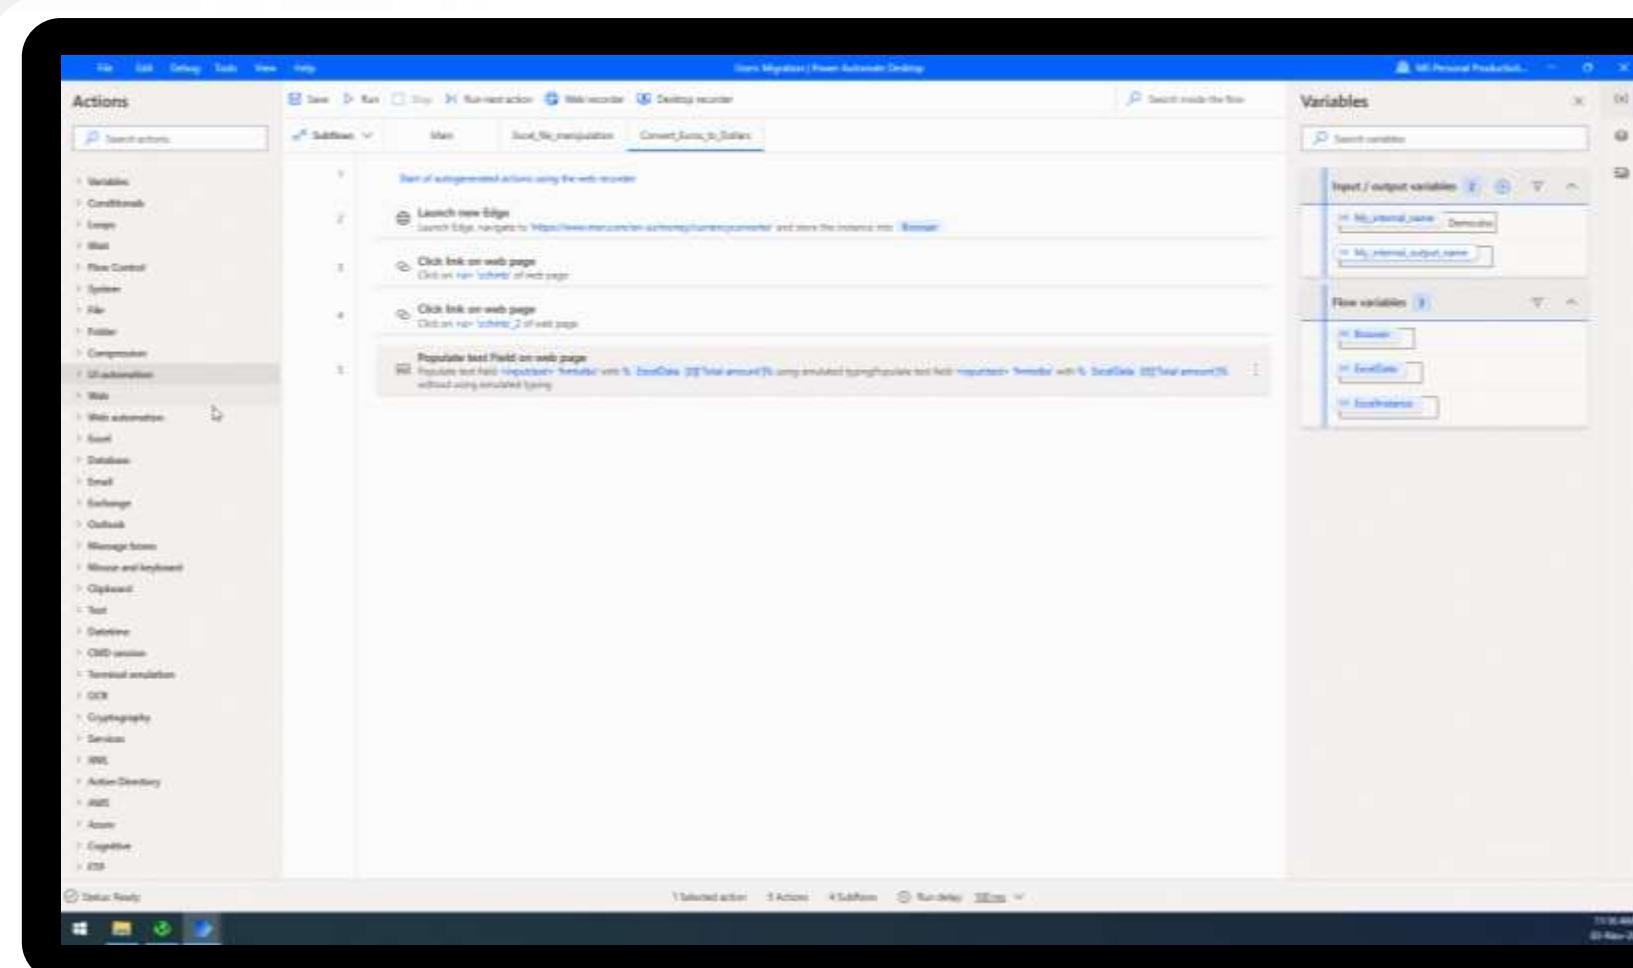

Create quickly and easily with desktop flow designer

Accelerate development, adoption, and deployment with streamlined authoring built for professional developers and citizen developers alike.

Intuitive **drag-and-drop interface** with **400+ prebuilt actions** to create each step in your desktop flow

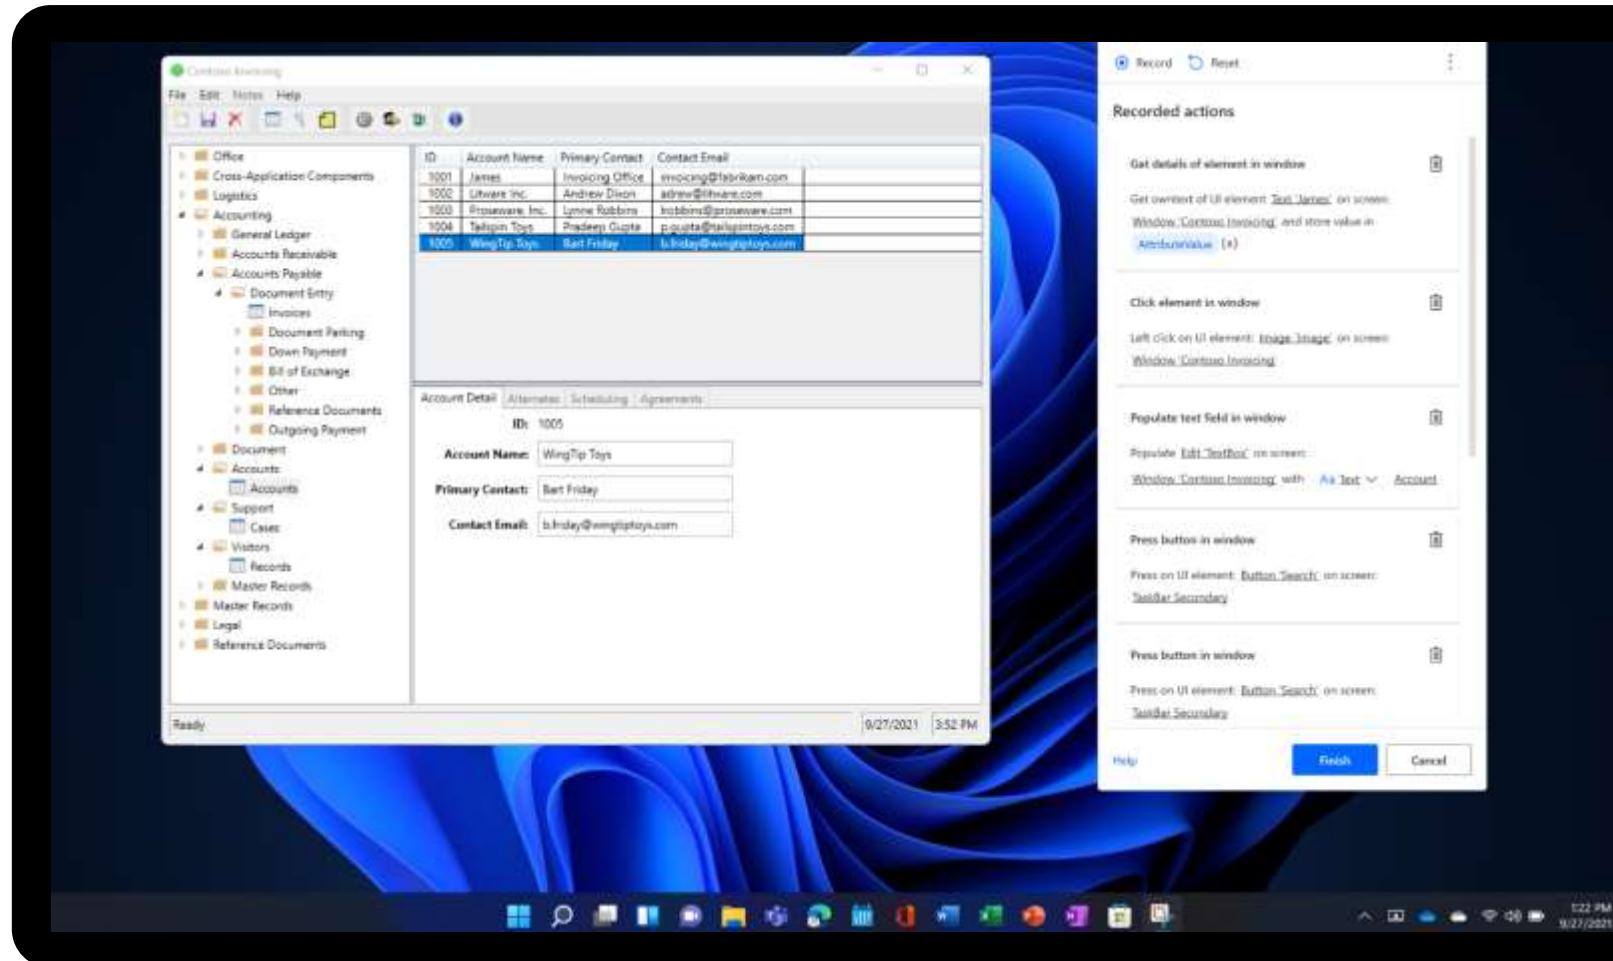

Use the **recorder** to capture your own actions, such as mouse clicks and keyboard inputs

Start quickly with prebuilt examples that are ready to run, or **share flows with others** for collaboration

Recorder

Use the recorder to capture your own actions

Deploy confidently with troubleshooting and monitoring

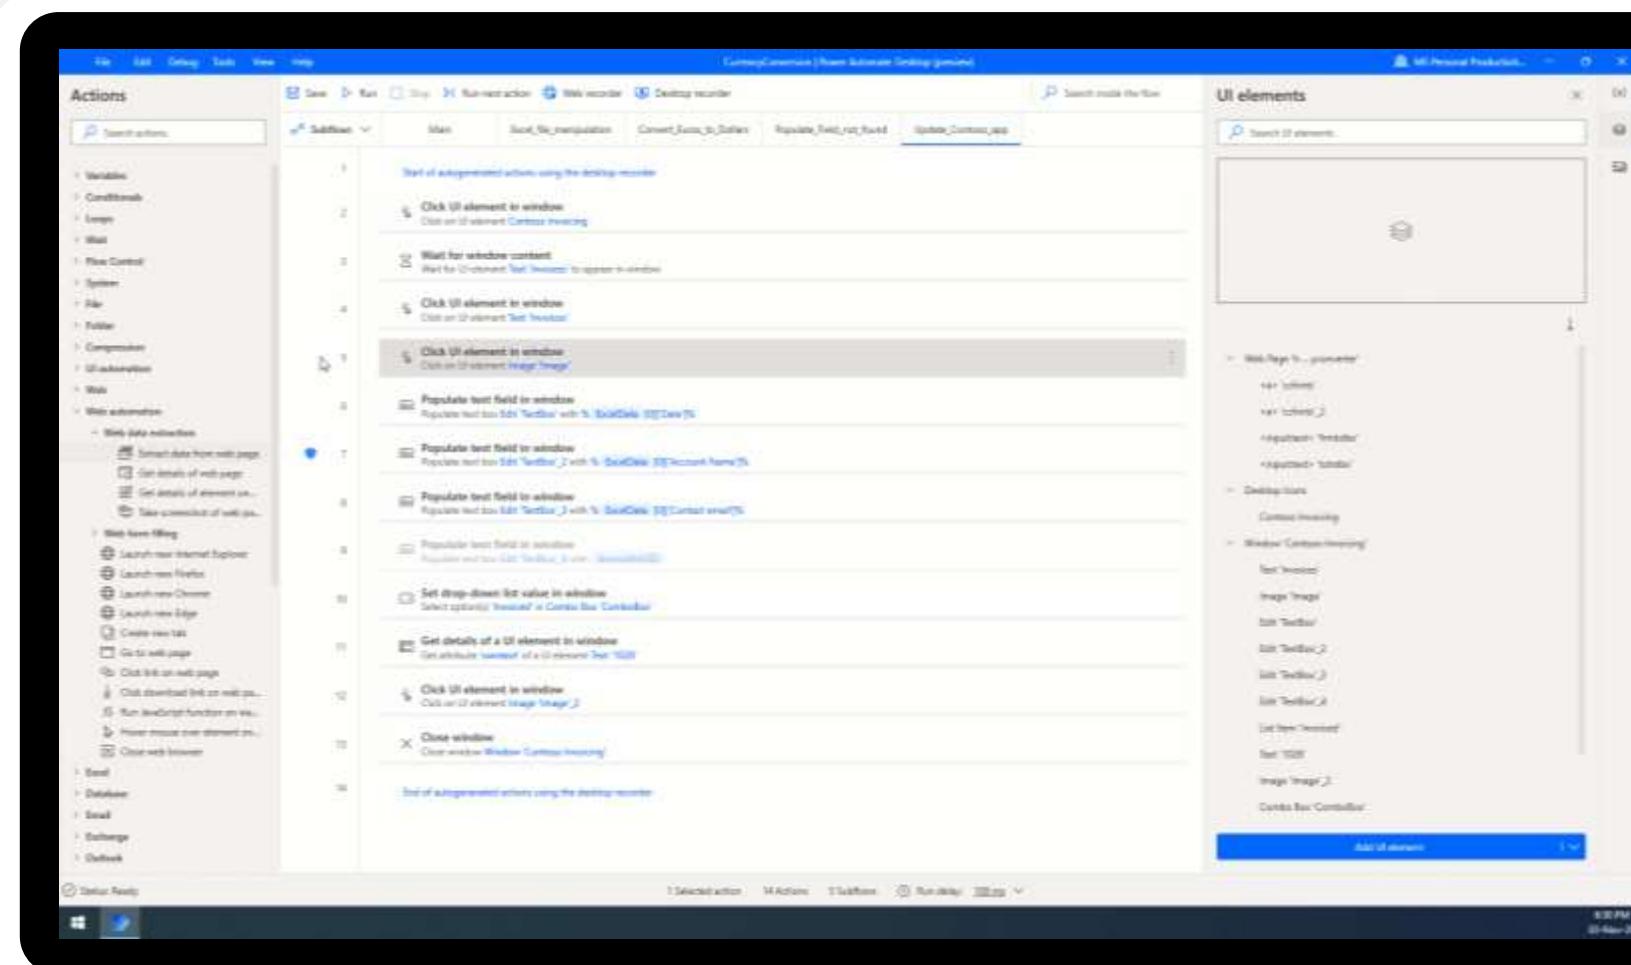

Keep your flows running smoothly with simple tools to test, debug, monitor, and manage your automations in one place.

Ensure flows continue to run with rich [error handling](#) settings

Use [debugging and testing tools](#) to troubleshoot as you build

Stay informed with flow [tracking](#), management, reporting

Prioritize based on rules, or promote critical workloads to the front of the line

**Orchestrate your
automations**

Hosted RPA for desktop flows

Desktop flows on Microsoft-hosted infrastructure on Azure

Scaling workloads

Hosted machine groups

Workload management

Seamless setup

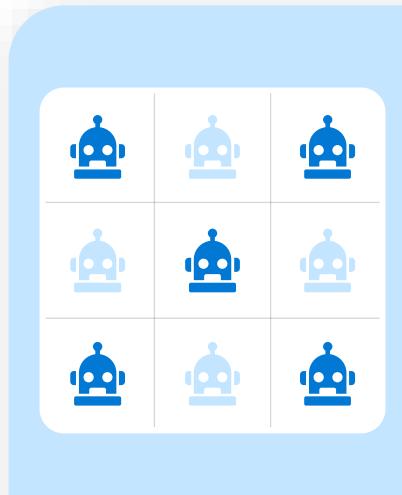

Orchestration

Hosted machine setup

Scale your workloads with hosted RPA

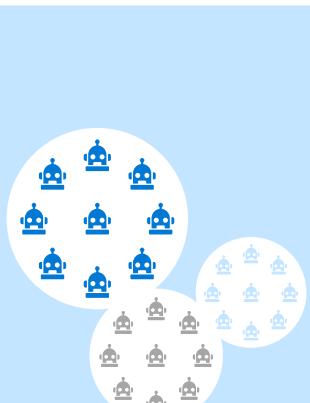

Single hosted machines

For pro and citizen developers

Build or test automation

For business users

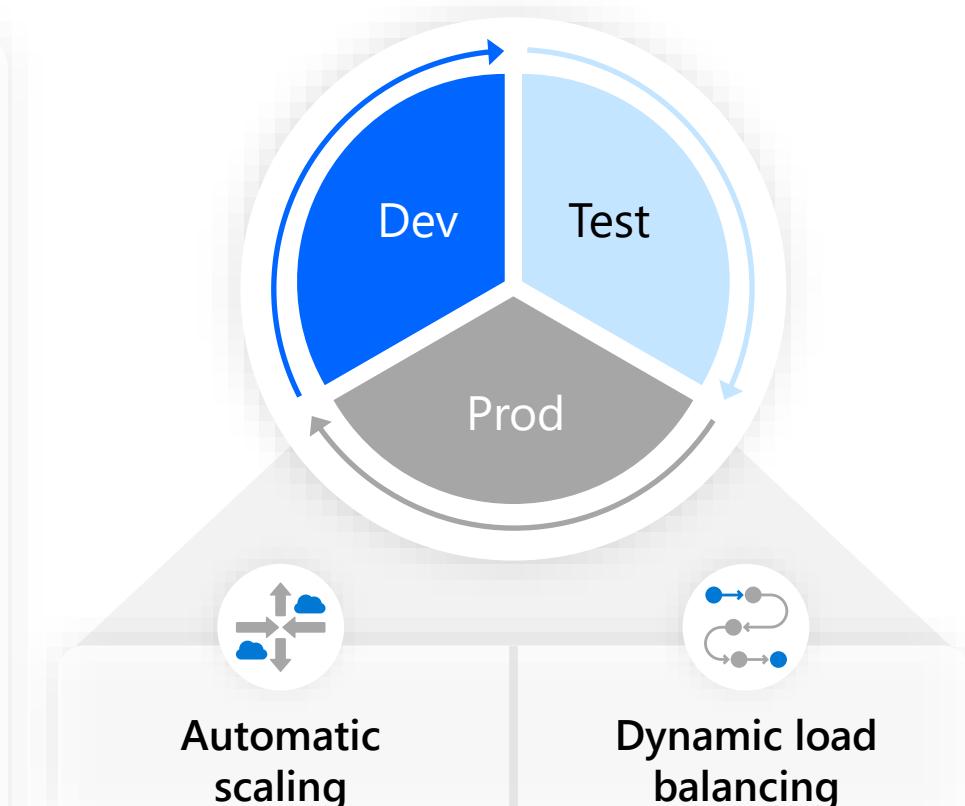

Run automation on dedicated machines

Hosted machine groups

For unattended automation in production

Optimize your resources for higher efficiency and lower cost

Automatic scaling

Manage peaks with machines that spin up and down to optimize efficiency

Dynamic load balancing

Optimize resources between processes, teams, and organizations

Hosted machine group: Unattended load-management

Increased load trends

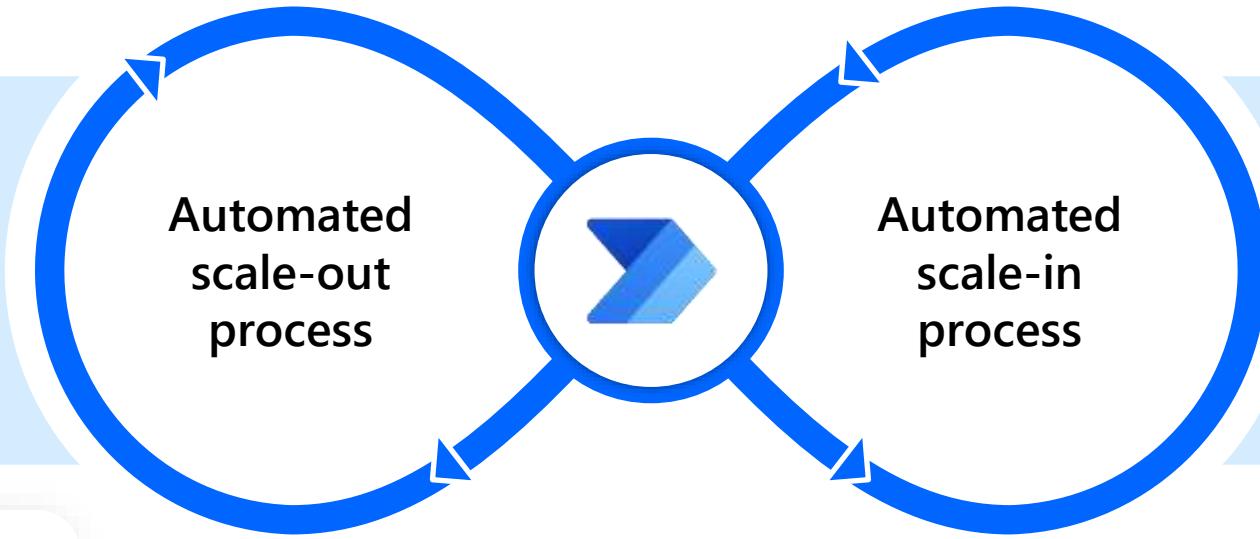

~10 mins to 1 hour

Average time to
scale-out/in

Machine utilization

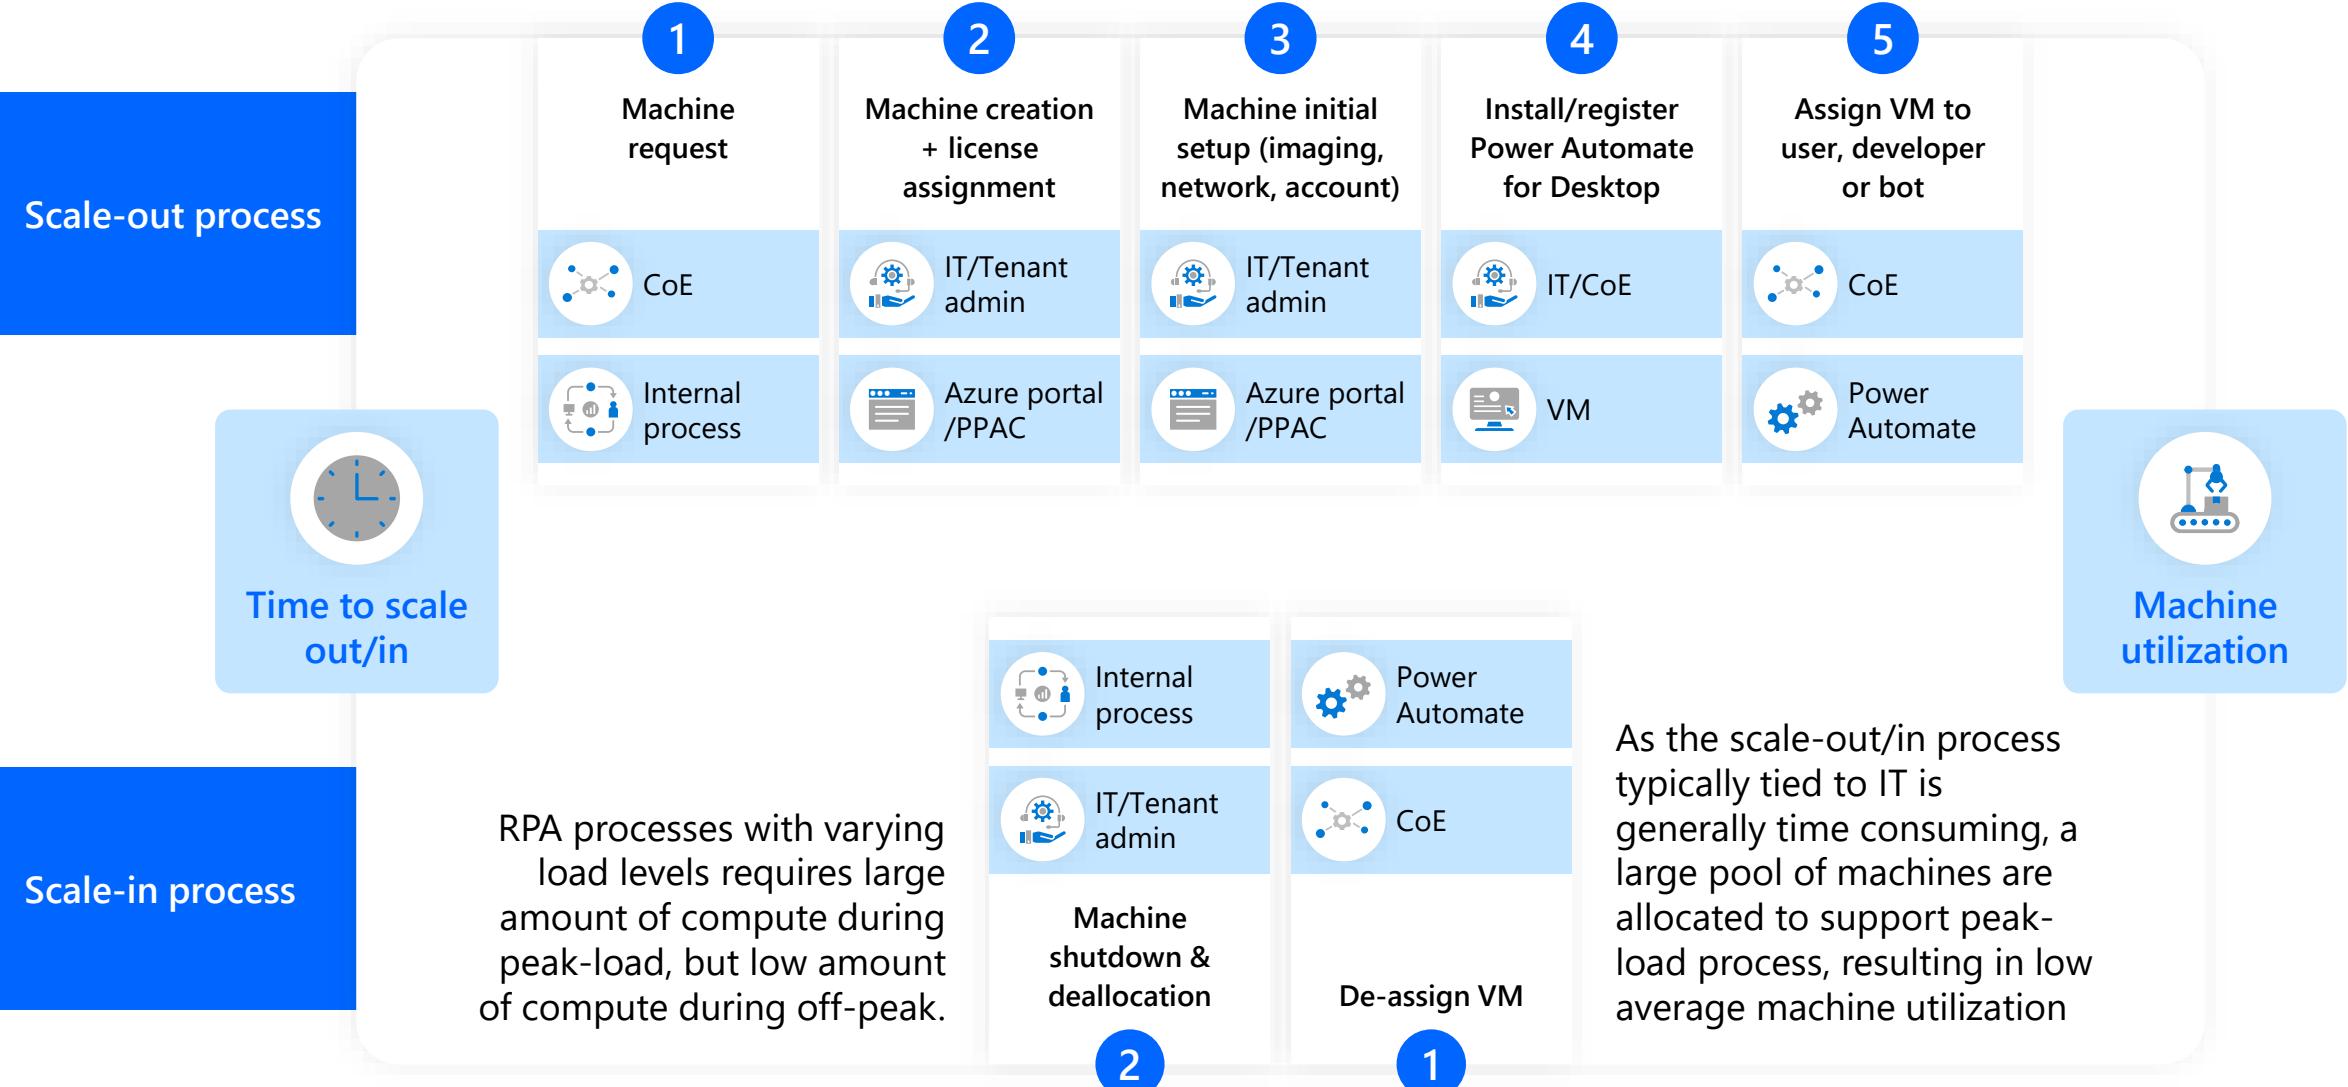

Decreased load trends

Observations

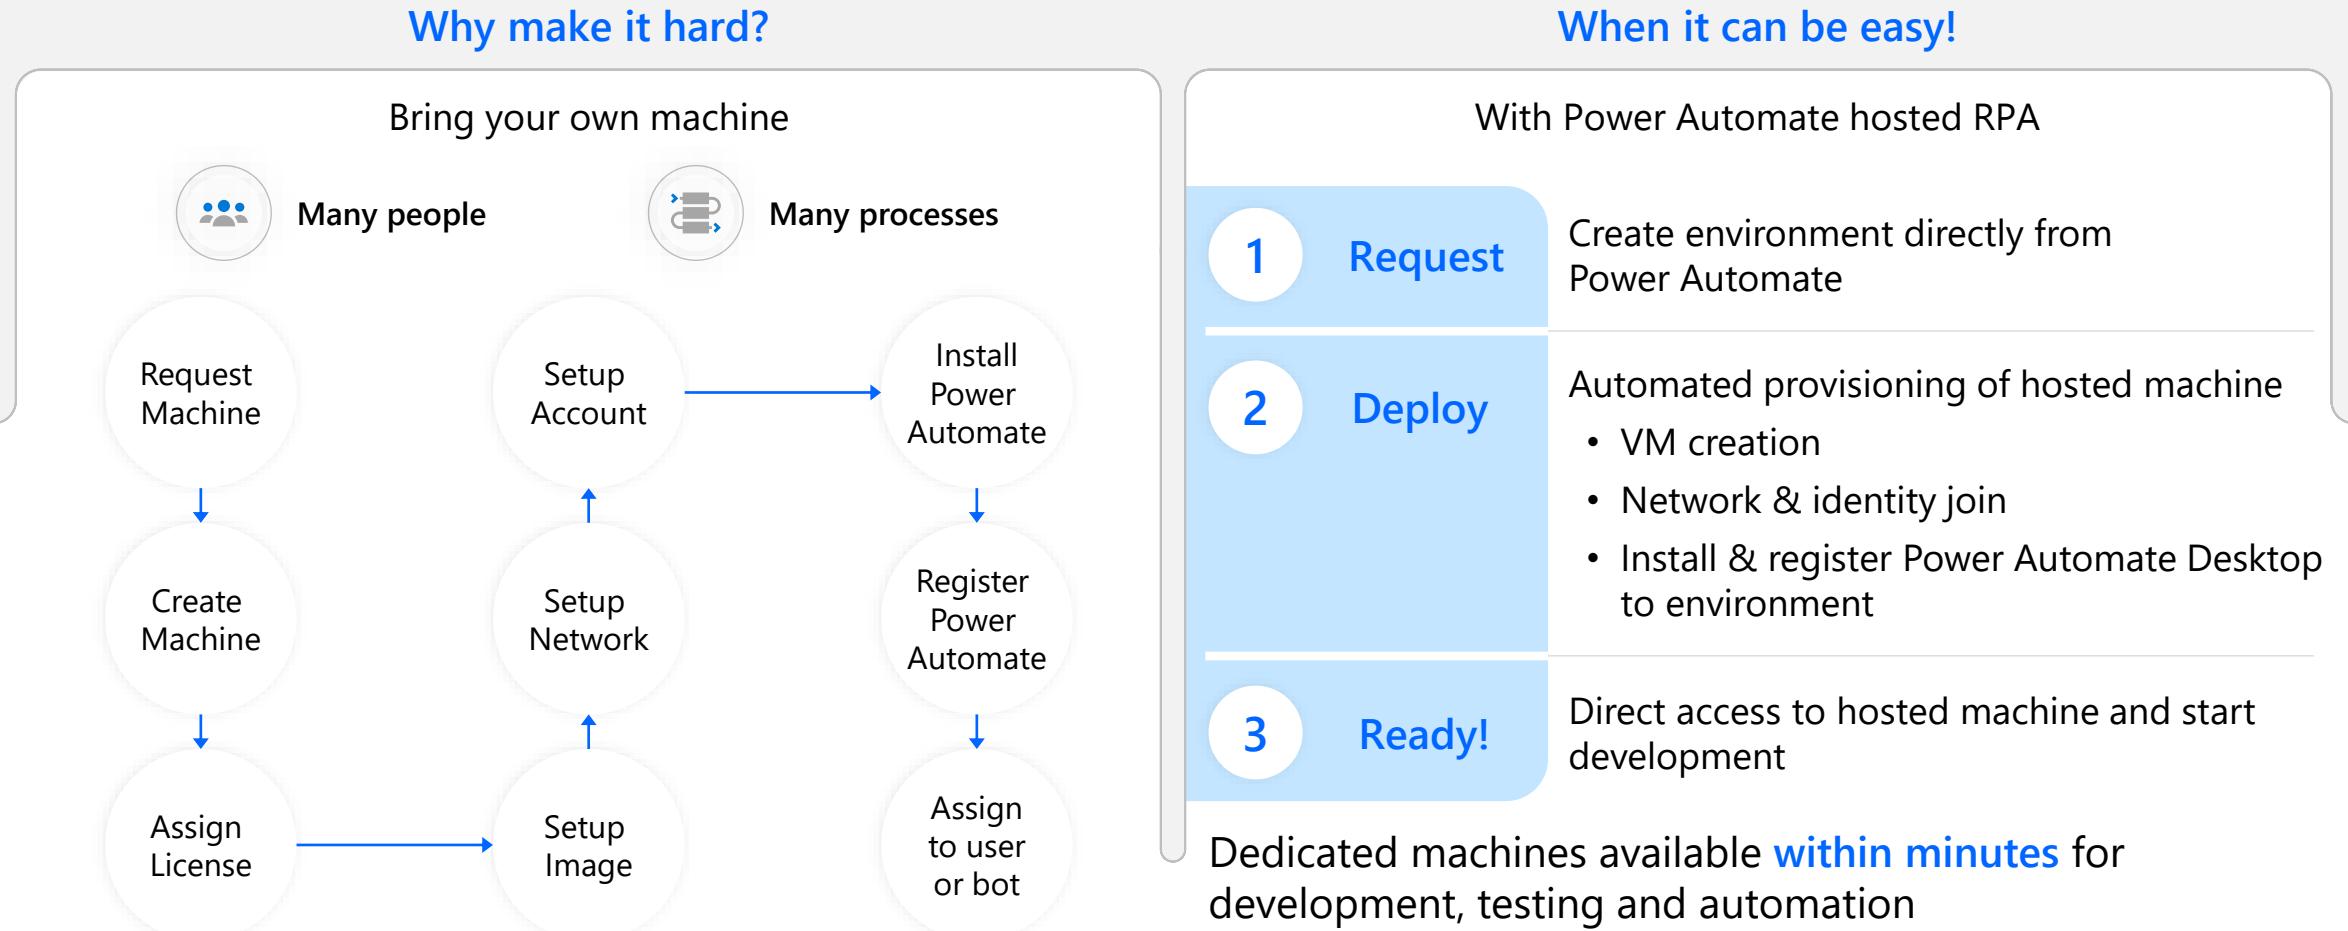

- With hosted machine group, multiple RPA processes with varying load levels in an environment are automatically scaled-out/in based on real-time load.
- The number of allocated capacity in an environment are automatically assigned across different RPA processes, ensuring available machines are efficiently utilized

Typical unattended RPA workload management

Seamless setup

Simplify and accelerate RPA machine deployment

Seamless orchestration

Monitor, manage, and optimize your RPA infrastructure

Monitor

queue and flow status

Prioritize

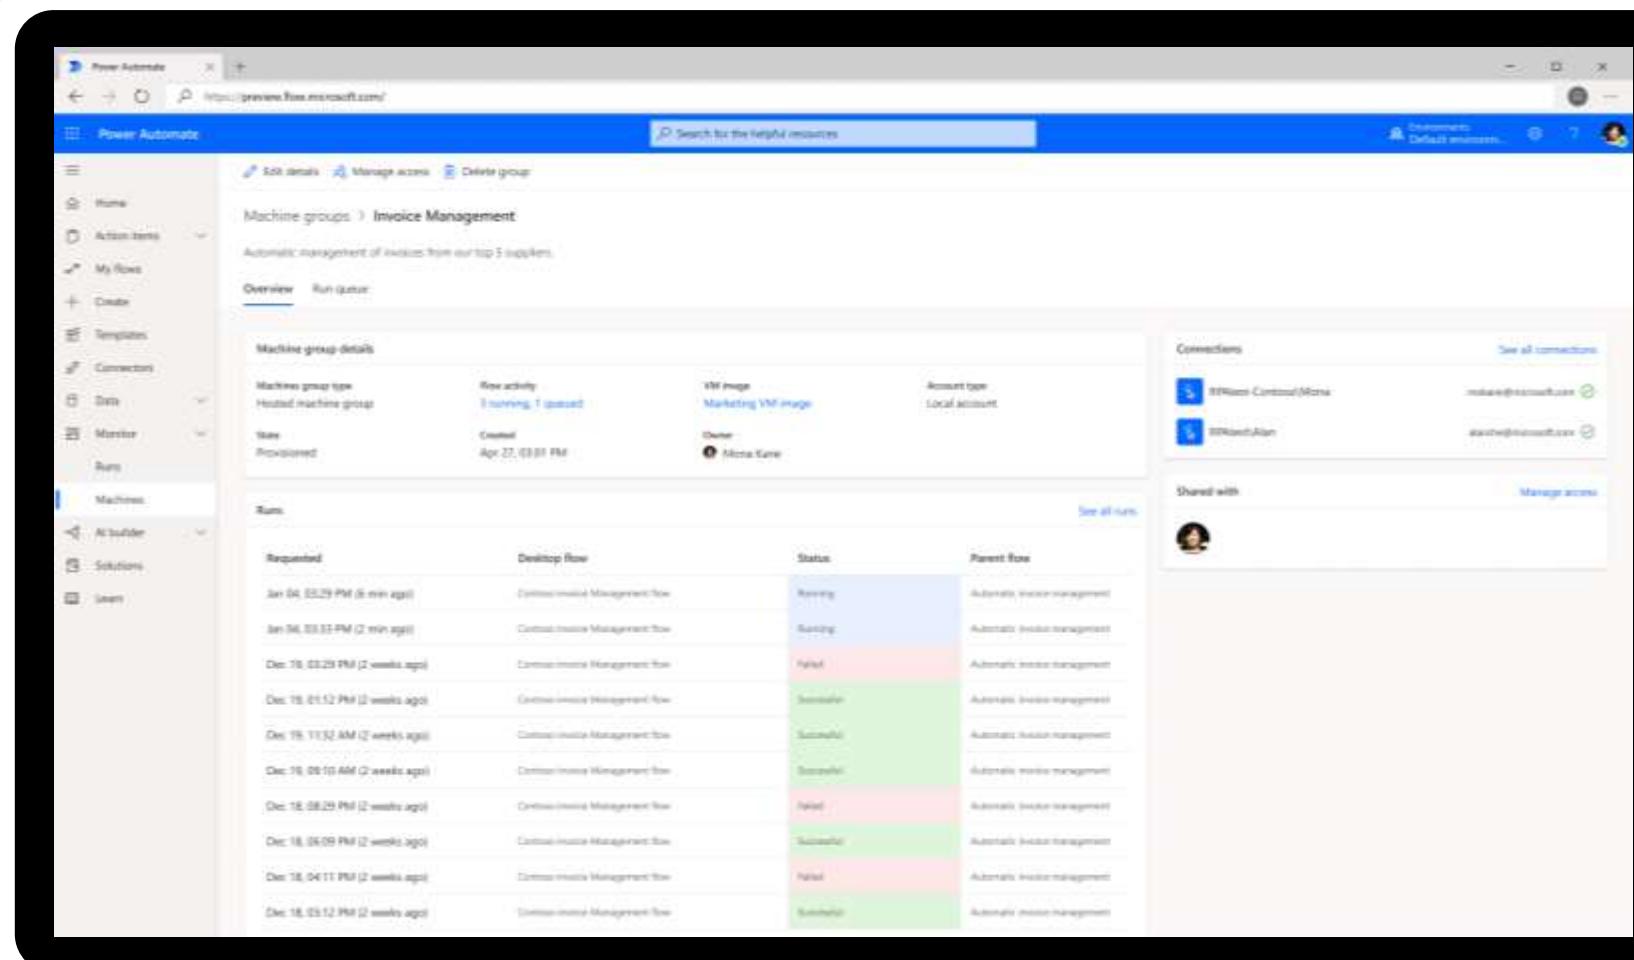

critical workloads

Add, remove, or reassign

resources as needed

Create

custom VMs for specialized applications
& configurations

Hosted machine setup

Seamless set up

The screenshot shows the 'VM image selection' step of the hosted machine setup. It displays a list of compatible VM images:

Image name	Description	Version	Owner
Marketing VM image	This is a VM image.	1.0	Mona Karr
Test VM image	—	1.0	Rita Solor
Dev VM image	—	1.0	Krist Lambert
Communication VM	Using this VM for...	1.0	Skip Bell
Design test VM	—	1.0	Mona Karr

Two virtual machine (VM) options

Default Windows image provided by Power Automate

Bring your own custom VM image through native integration with Azure Compute Gallery

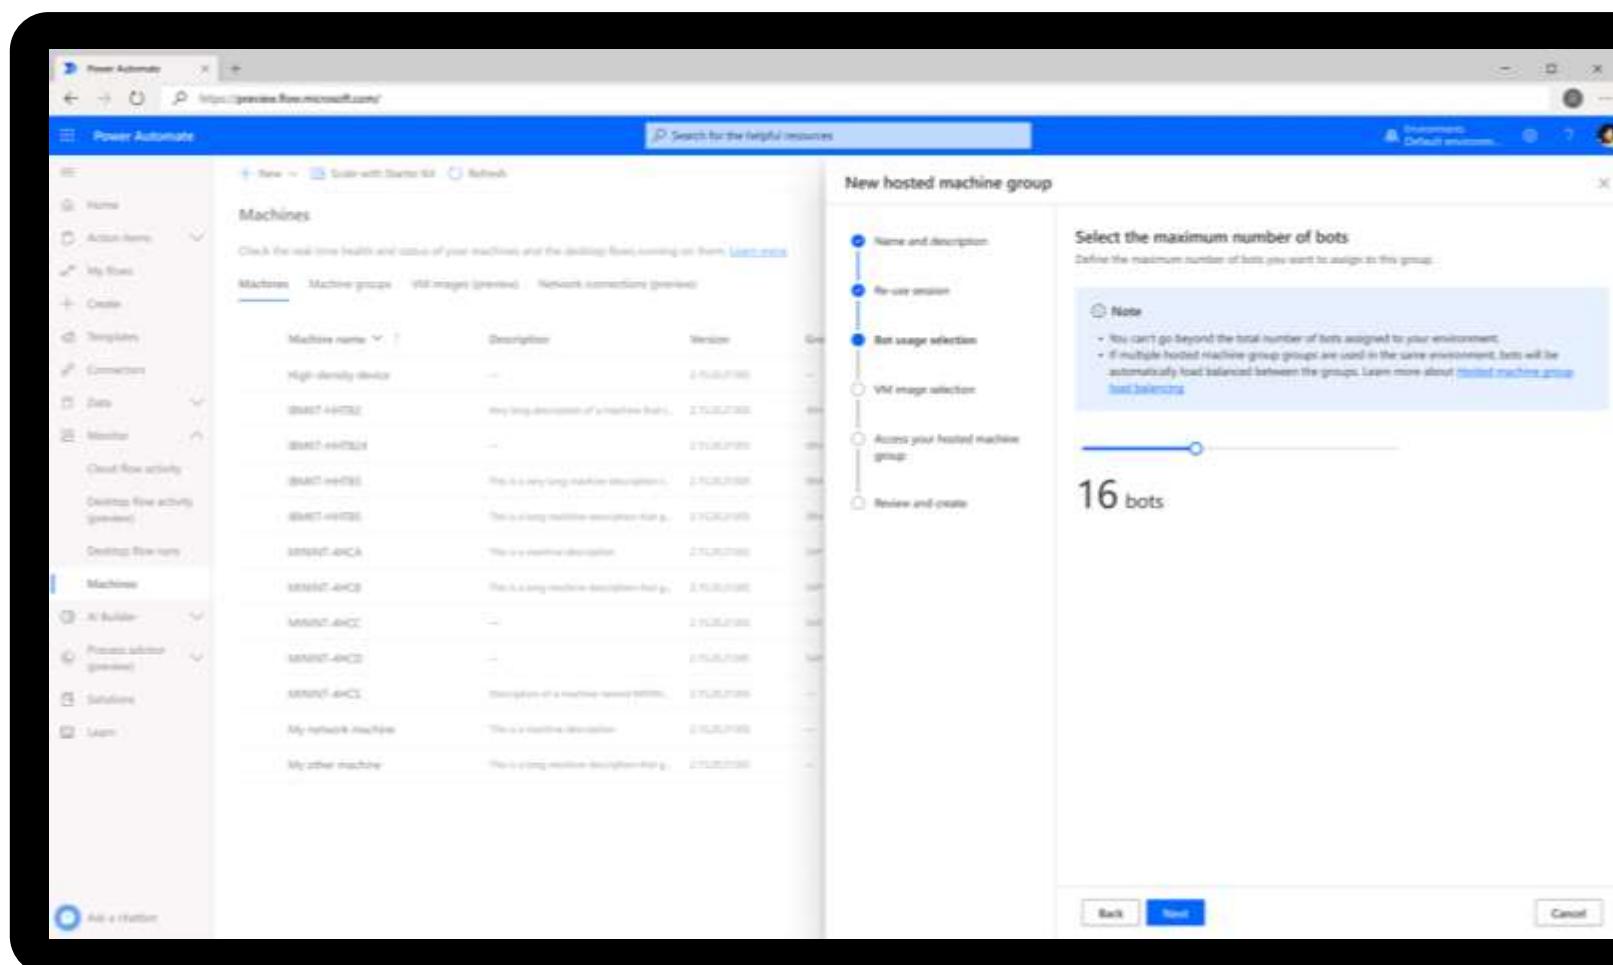

The screenshot shows the 'Virtual network selection' step of the hosted machine setup. It displays a list of virtual networks:

Virtual network name	Description	Type	Owner
VNet Marketing	—	Hybrid AD Join	Mona Karr
Company Protected Vnet	Use this Virtual...	Azure AD Join	Eric Bell
Dev test Vnet	—	Hybrid AD Join	Mona Karr

Automation Project app

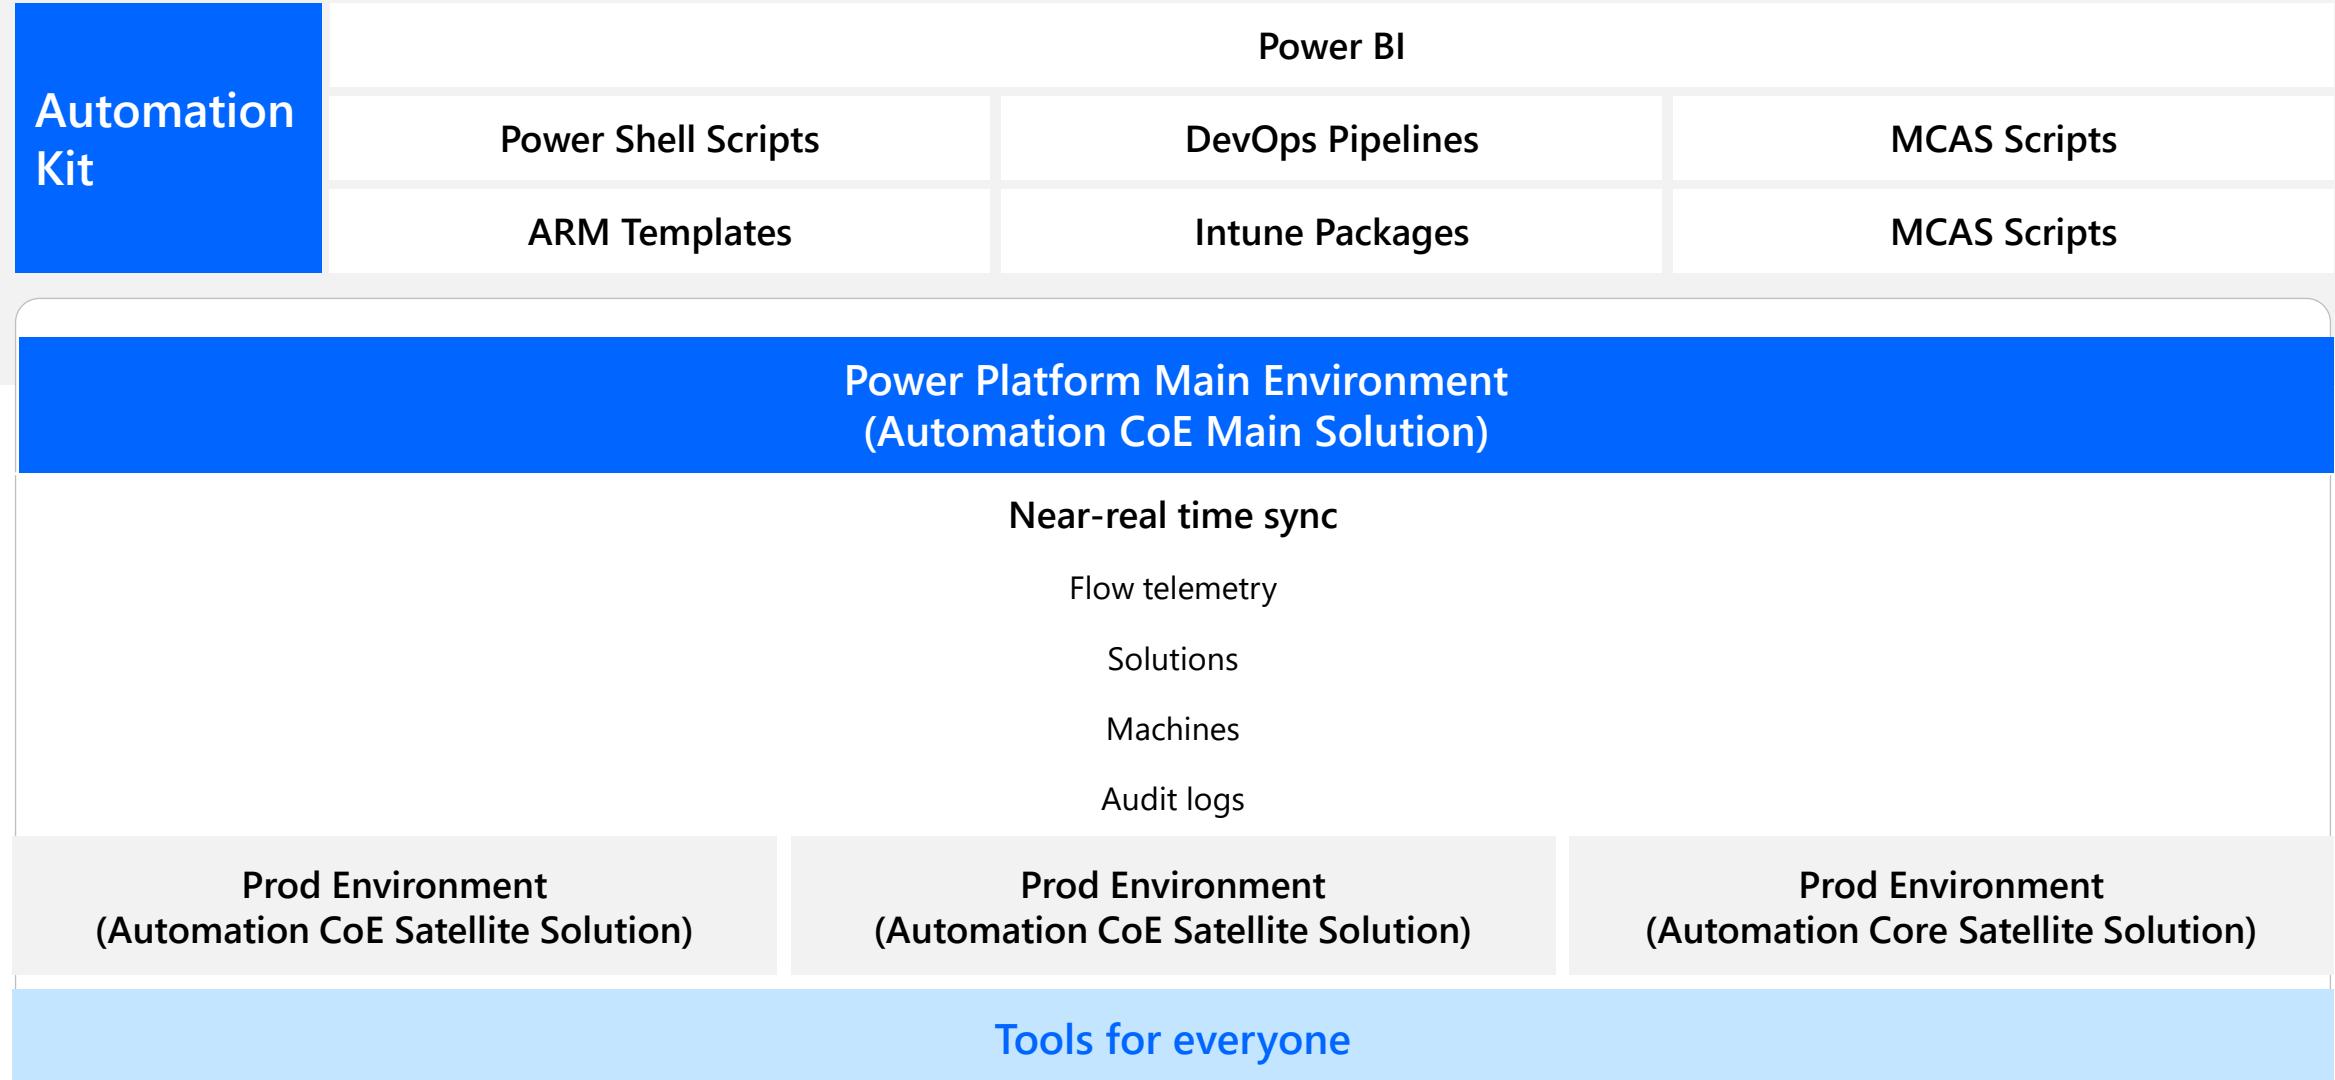

Streamline new automation project requests with approvals, and help with prioritization.

The screenshot shows a tablet displaying the "AUTOMATION PROJECT" app. The interface is a grid of project cards, each representing a different automation task. The cards are arranged in four columns and five rows. Each card includes details such as the project name, status, submitter, department, owner, and score. A summary bar on the right provides aggregate statistics for approved, declined, saved, and submitted projects.

Power Automate

+

Dataverse - data storage and management engine serving as a foundation for Microsoft's Power Platform and Dynamics 365 apps

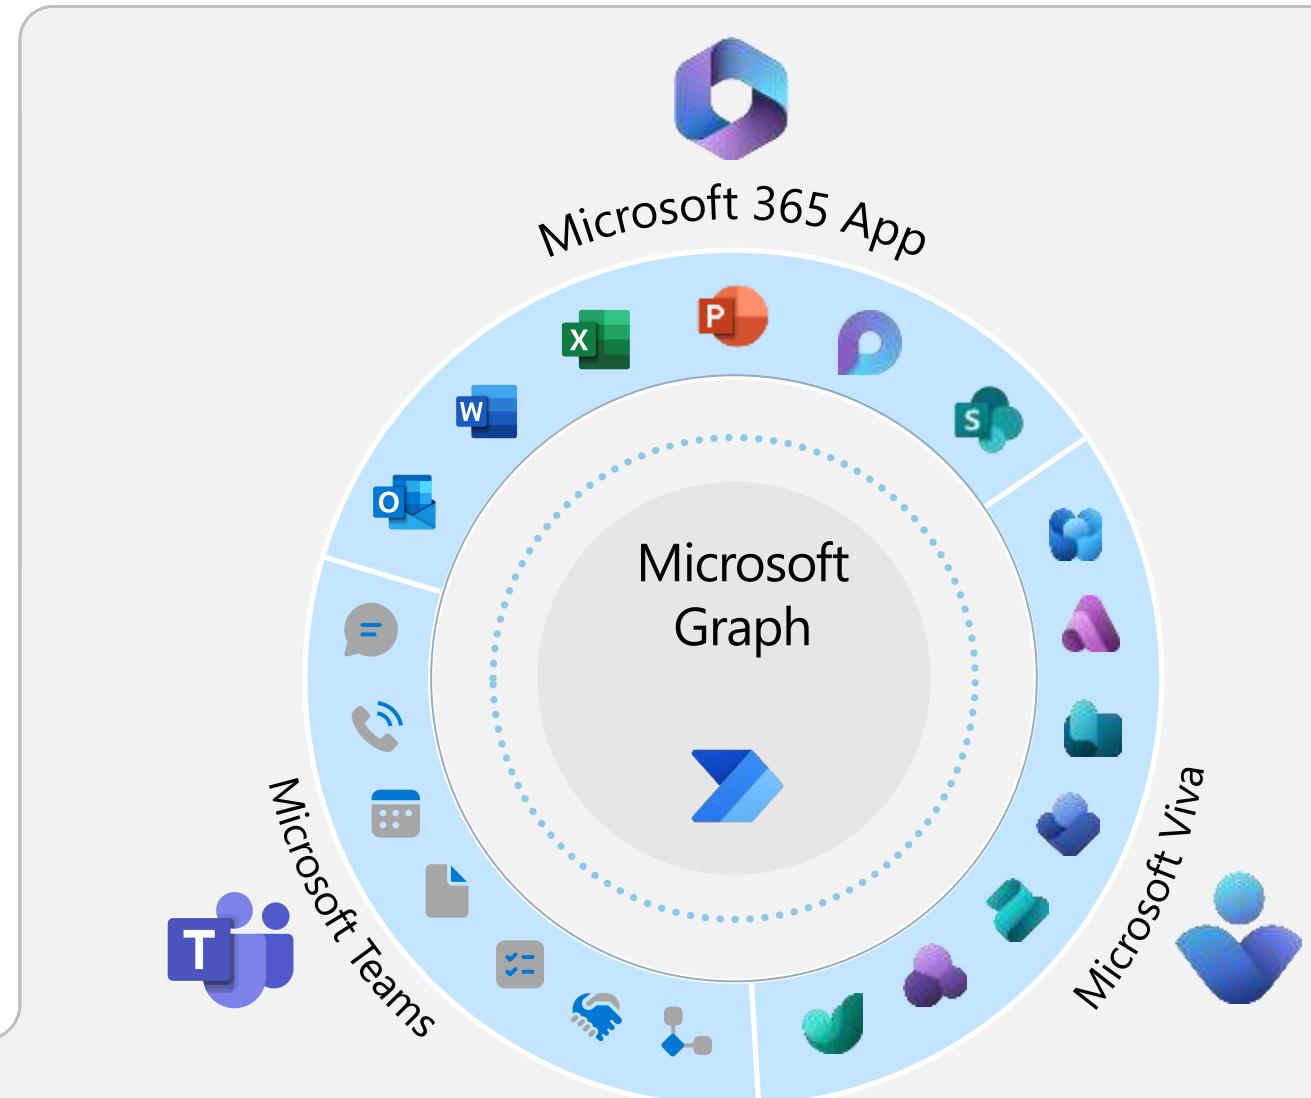

Automate your place of work

Utilize the Microsoft Graph rest APIs with Power Automate to unlock endless productivity gains.

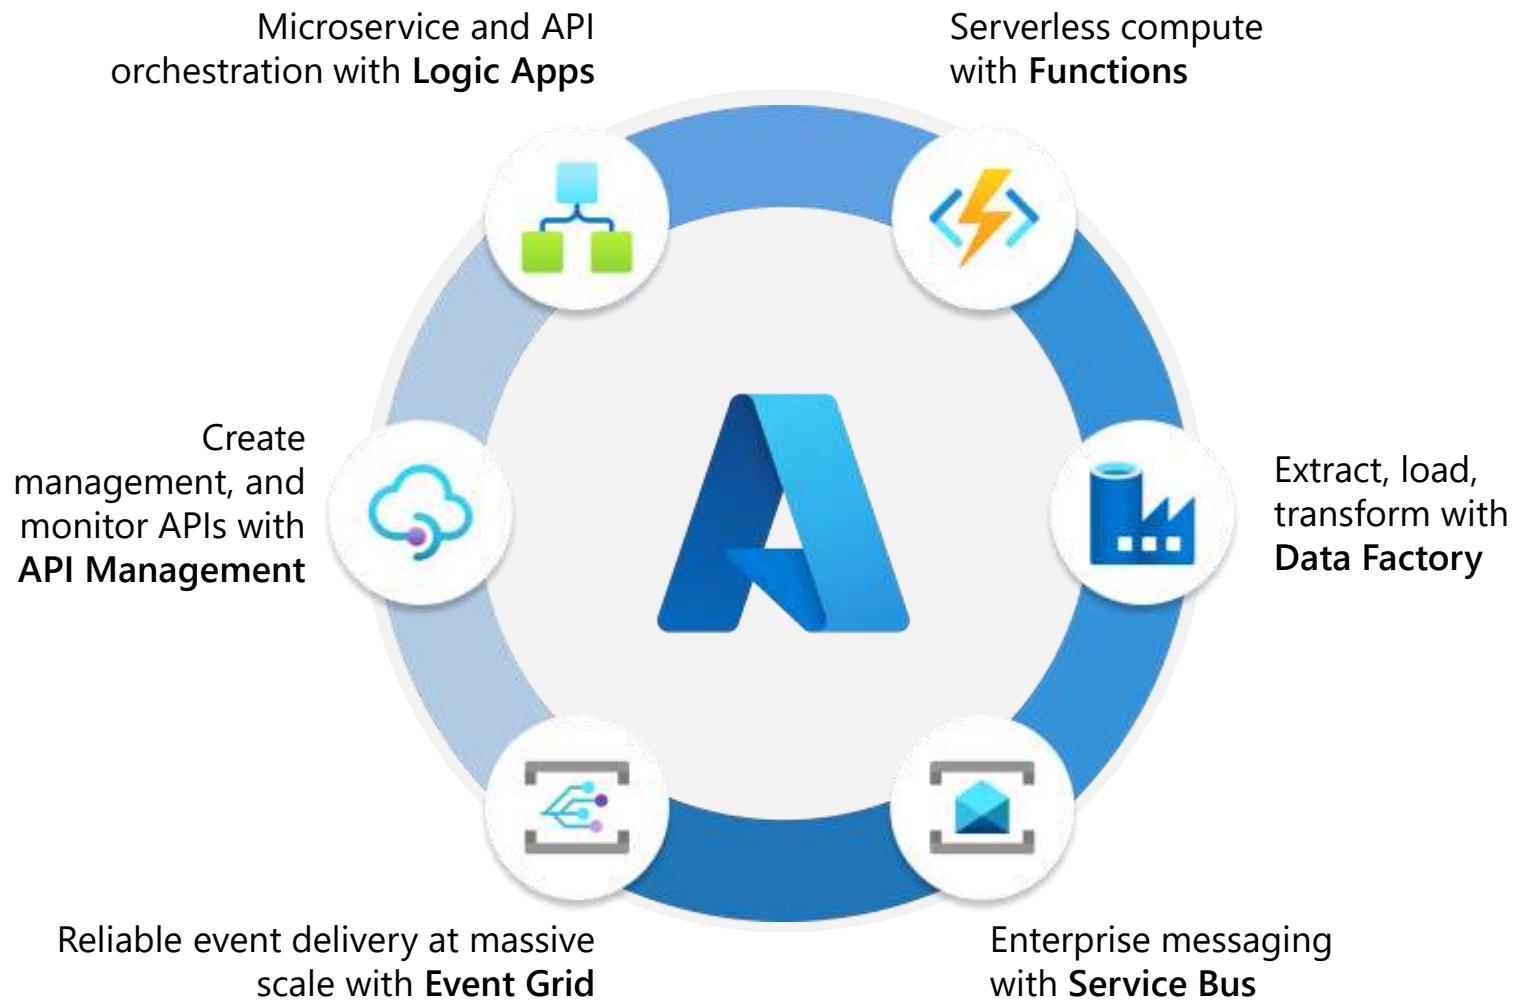

Microsoft 365 core services: Bookings, Calendar, Delve, Excel, Microsoft 365 compliance eDiscovery, Microsoft Search, OneDrive, OneNote, Outlook/Exchange, People (Outlook contacts), Planner, SharePoint, Teams, To Do, Viva Insights

Enterprise Mobility + Security services: Advanced Threat Analytics, Advanced Threat Protection, Azure Active Directory, Identity Manager, and Intune

Windows services: Activities, devices, notifications, Universal Print

Connecting Azure Services

Call Azure Logic Apps and other Azure Services through Power Automate.

Between Power Automate, Logic Apps, and Functions, the integration experience between these services continues to improve over time.

Build a component in one service and use that component in the other services.

Augmenting and extending your SAP solution landscape

Prototype new solutions and co-build custom user experiences to act more effectively on SAP data

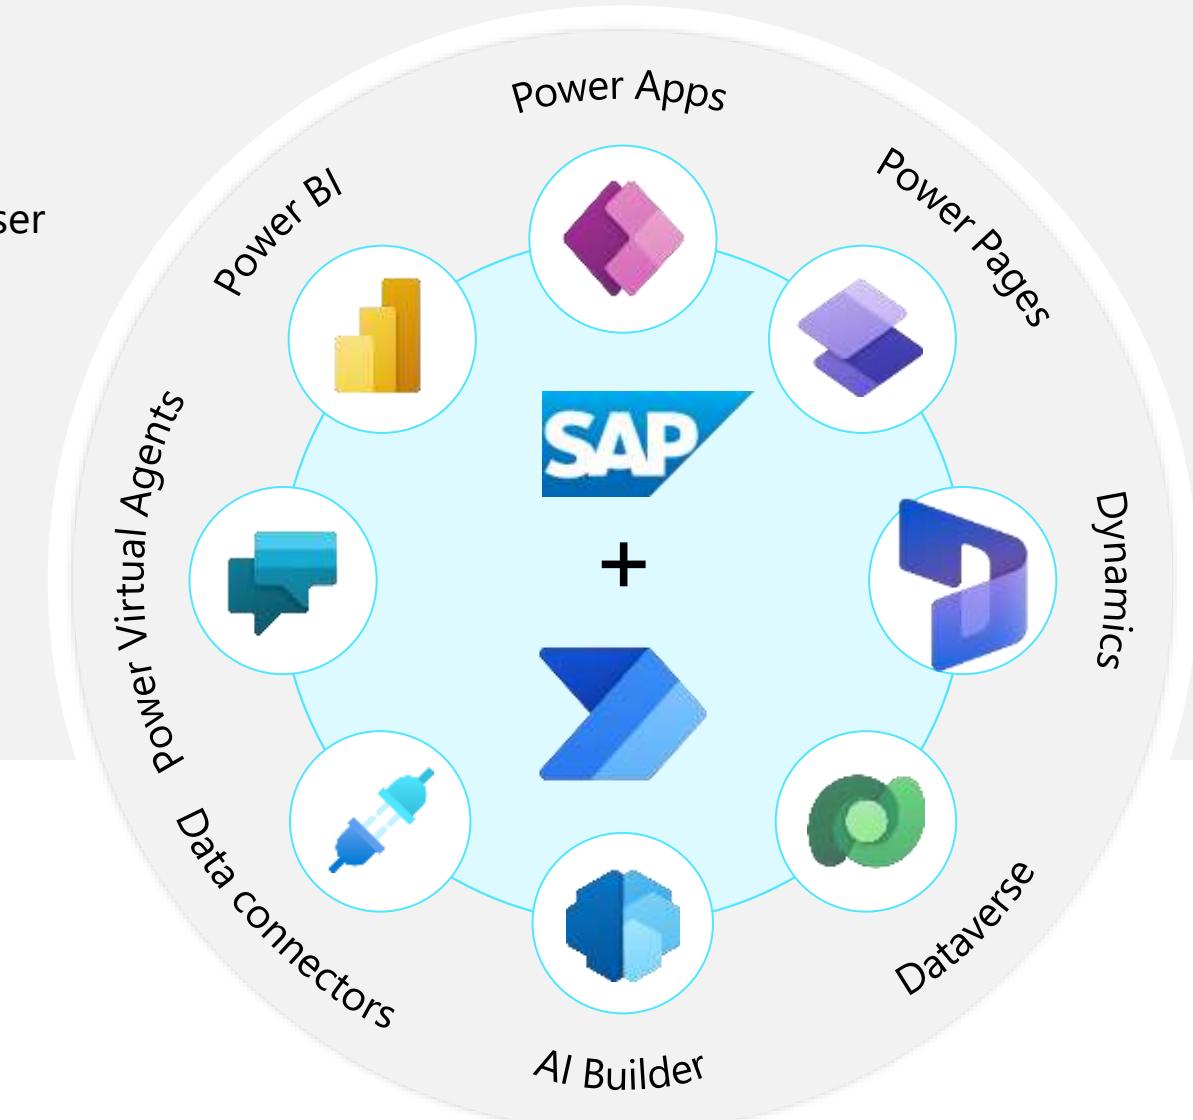

Augment SAP solution and close any gaps for continuous process automation or app usage

Extend SAP solution and connect with 1000+ systems to innovate workforce productivity

How?

- Prebuilt SAP connector
- Advanced SAP system connection support
- Updated on-premises data gateway

Extending SAP with the Power Platform

Maximize SAP value with the world's leading low code platform

Build

Low-code workflows to deliver simple, modern and powerful experiences across SAP data and processes on any device.

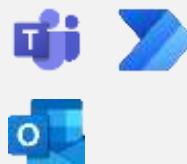

Automate

Processes that span SAP and key line of business systems without the need for complex code – RPA capabilities included.

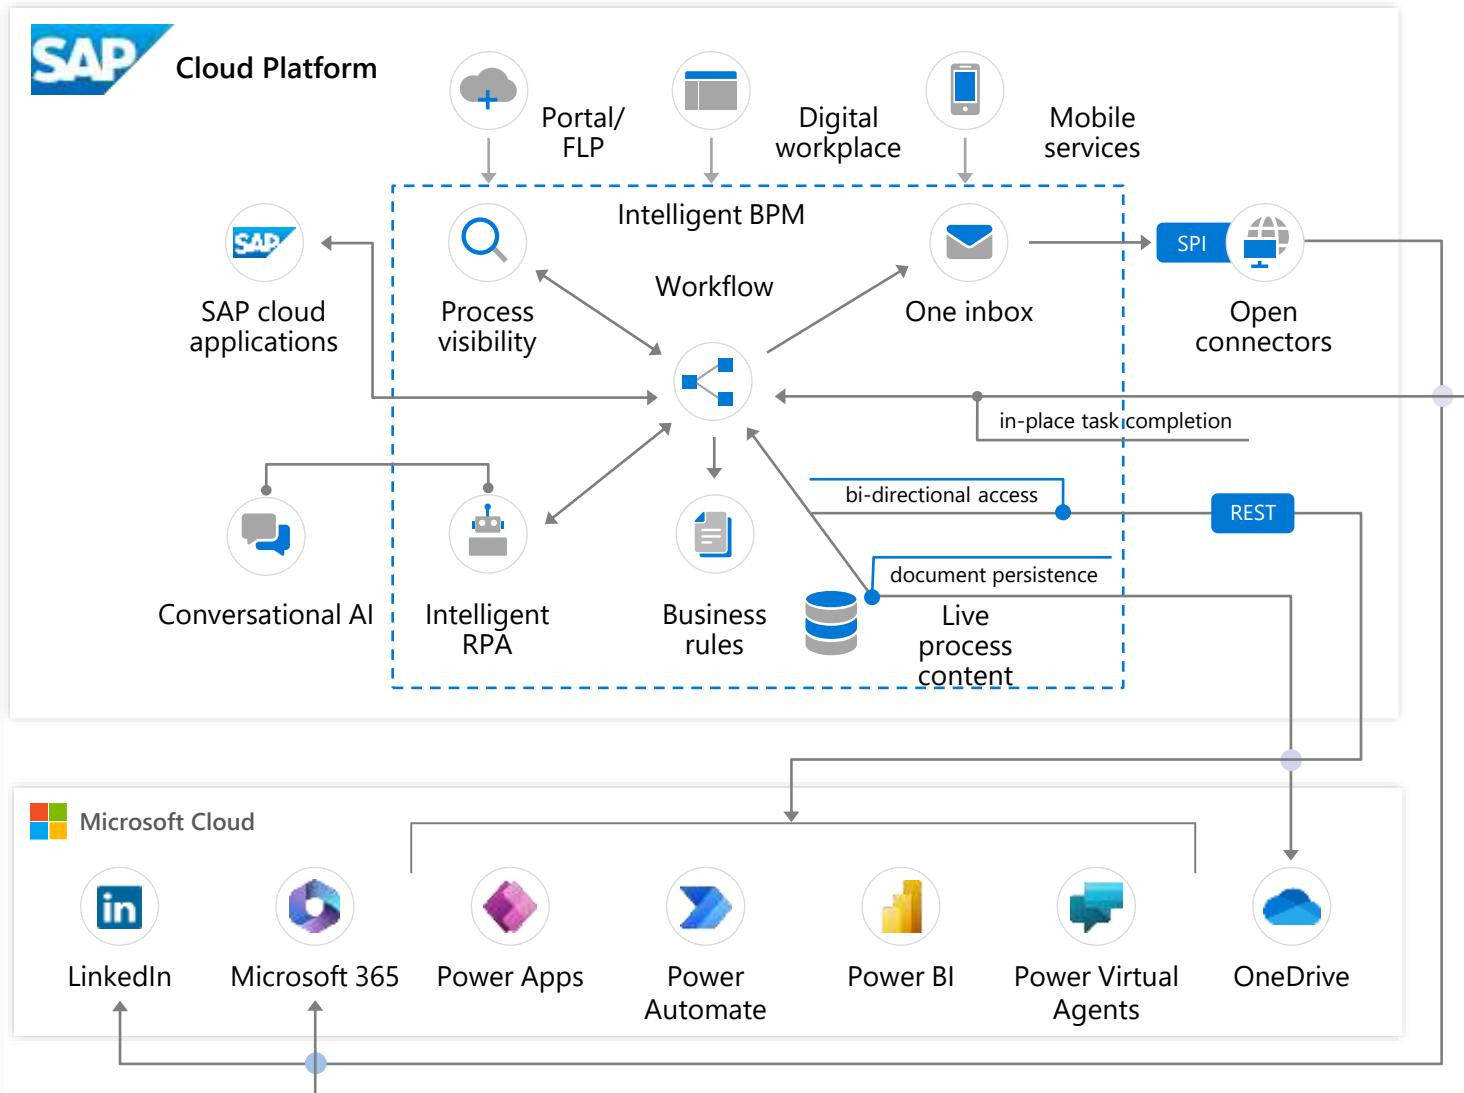

Empower

Users wherever they work by surfacing apps and processes in the productivity tools they use every day such as Teams and Outlook.

Safeguard

Mission critical SAP data with strict security and governance tools for Power Platform apps and processes.

Copilot Studio

**The future is
conversational**

Momentum of conversational AI

By 2026, **30% of work activities** involving the use of technology will be **conversationally enabled**¹

By 2026, **conversational artificial intelligence** deployments within contact centers will **reduce agent labor costs by \$80 billion**²

By 2026, **up to 80% of organizations' digital experiences** will be delivered to consumers **via virtual people**²

Microsoft Copilot Studio

Build your own copilot

Create and publish a custom copilot for your organization using the intuitive building experience enhanced with large language models and generative AI

Customize Microsoft Copilot

Extend and customize 1st party Microsoft Copilots with your own enterprise scenarios. Copilot Studio will be included with the Microsoft 365 Copilot SKU.

Connected platform

Integrates and exposes various Microsoft's conversational AI technology stacks - integrated with Azure AI Studio, Azure Cognitive Services, Azure Bot Framework, Power Platforms AI models and more

Manage copilot experiences

Governance and control features to monitor usage with full visibility of customizations, standalone copilots as well as who is building and customizing them.

The screenshot shows the Microsoft Copilot Studio interface. At the top, it says "Copilot Studio" and "Northwind Trader". The left sidebar has a navigation menu with items: Home, Building blocks, GPTs (selected), Topics, Plugin actions, Prompts, Copilots, Create a copilot, Extend Microsoft Copilot, Publish, Analytics, Settings, AI integration tools, Channels, and Test your copilot. The main content area is titled "Northwind Trader" and "View solution (Northwind Trader copilot prod)". It features a section titled "Boost your conversations (preview)" with a sub-section "Enter your website" and buttons for "Use generative answers" (which is selected) and "Advanced options". Below this, there's a note: "Make sure AI-generated content is accurate and appropriate before using. See terms". There are three cards at the bottom: "Extend a Microsoft Copilot (preview)" (with a "Test with plugins" button), "Add plugins for dynamic chaining (preview)" (with a "Go to plugins" button), and "Meet people where they are" (with a "Go to publish" button). The top right corner shows "Env Prod" and a globe icon.

Generative AI is changing building

Traditional (e.g. Azure)

- Create Azure tenant and infra
- Annotate thousands of utterances and conversations to build a custom NL model
- Create topics in code using Visual Studio and BF SDK
- Host Azure Bot Service and instantiate the appropriate channel
- Deploy your copilot to the service
- Build your own custom analytics pipeline
- Every time your knowledge content changes (e.g. different hours) go and update the copilot in code

Generative AI is changing building

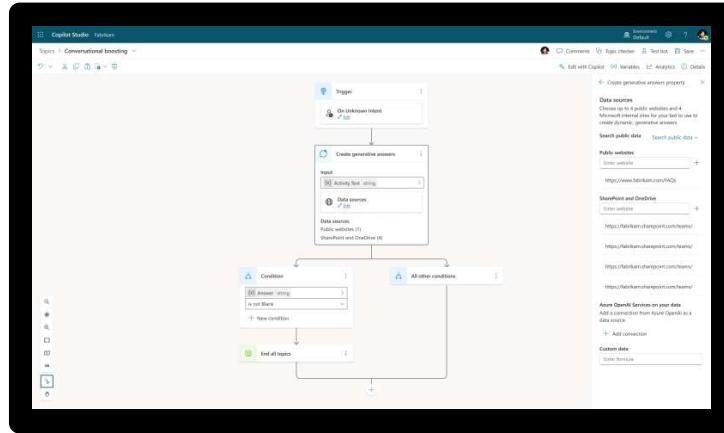

Copilot Studio with Generative AI

- Full E2E SaaS – no infra to host or manage
- No explicit NL training or custom model required, comes with powerful large language model
- Point to a knowledge sources and have a useful bot in minutes with Generative AI
- Customize your copilot with business-critical topics using easy to use graphical interface and 1000s of pre-built connectors, or call custom APIs
- Developers, low-code users can collaborate inside the same canvas with graphical multi-authoring and code side-by-side
- Publish to the channel of your choice in minutes with a few clicks

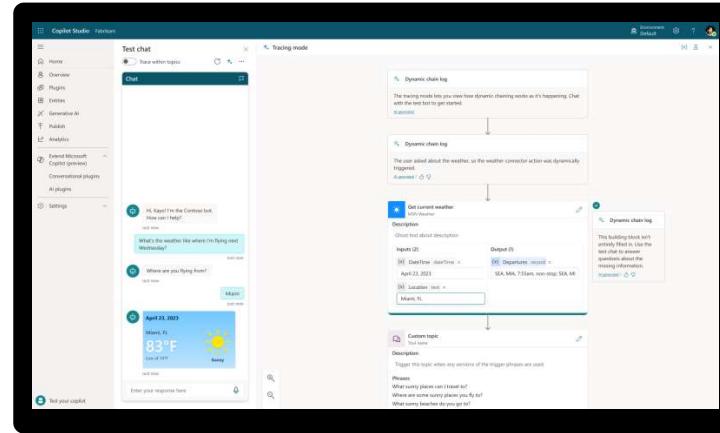

Generative AI in Copilot Studio

Powered by Azure OpenAI Service

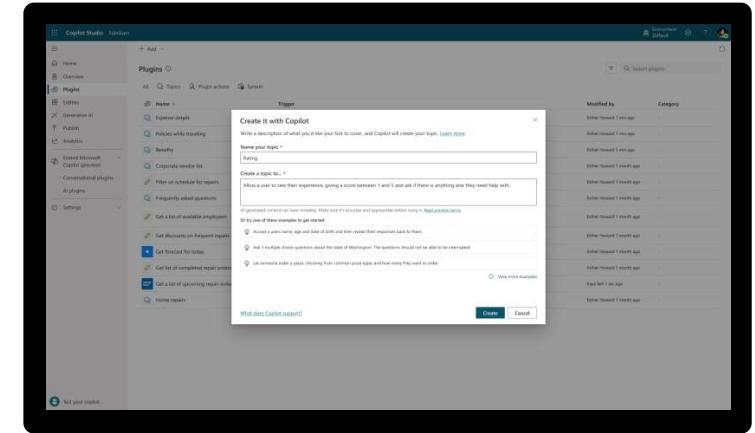

TO ANSWER

TO ACT

TO BUILD

Generative Answers

Dynamically generate multi-turn answers based off an organization's content in real-time.

Public Preview

Generative Actions

Generate dialog and take action through dynamically chaining existing building blocks and plugins.

Limited Preview

Generative Building

The Copilot assistant helps build, design and modify copilot topics through natural language.

Generally Available

Generative Answers

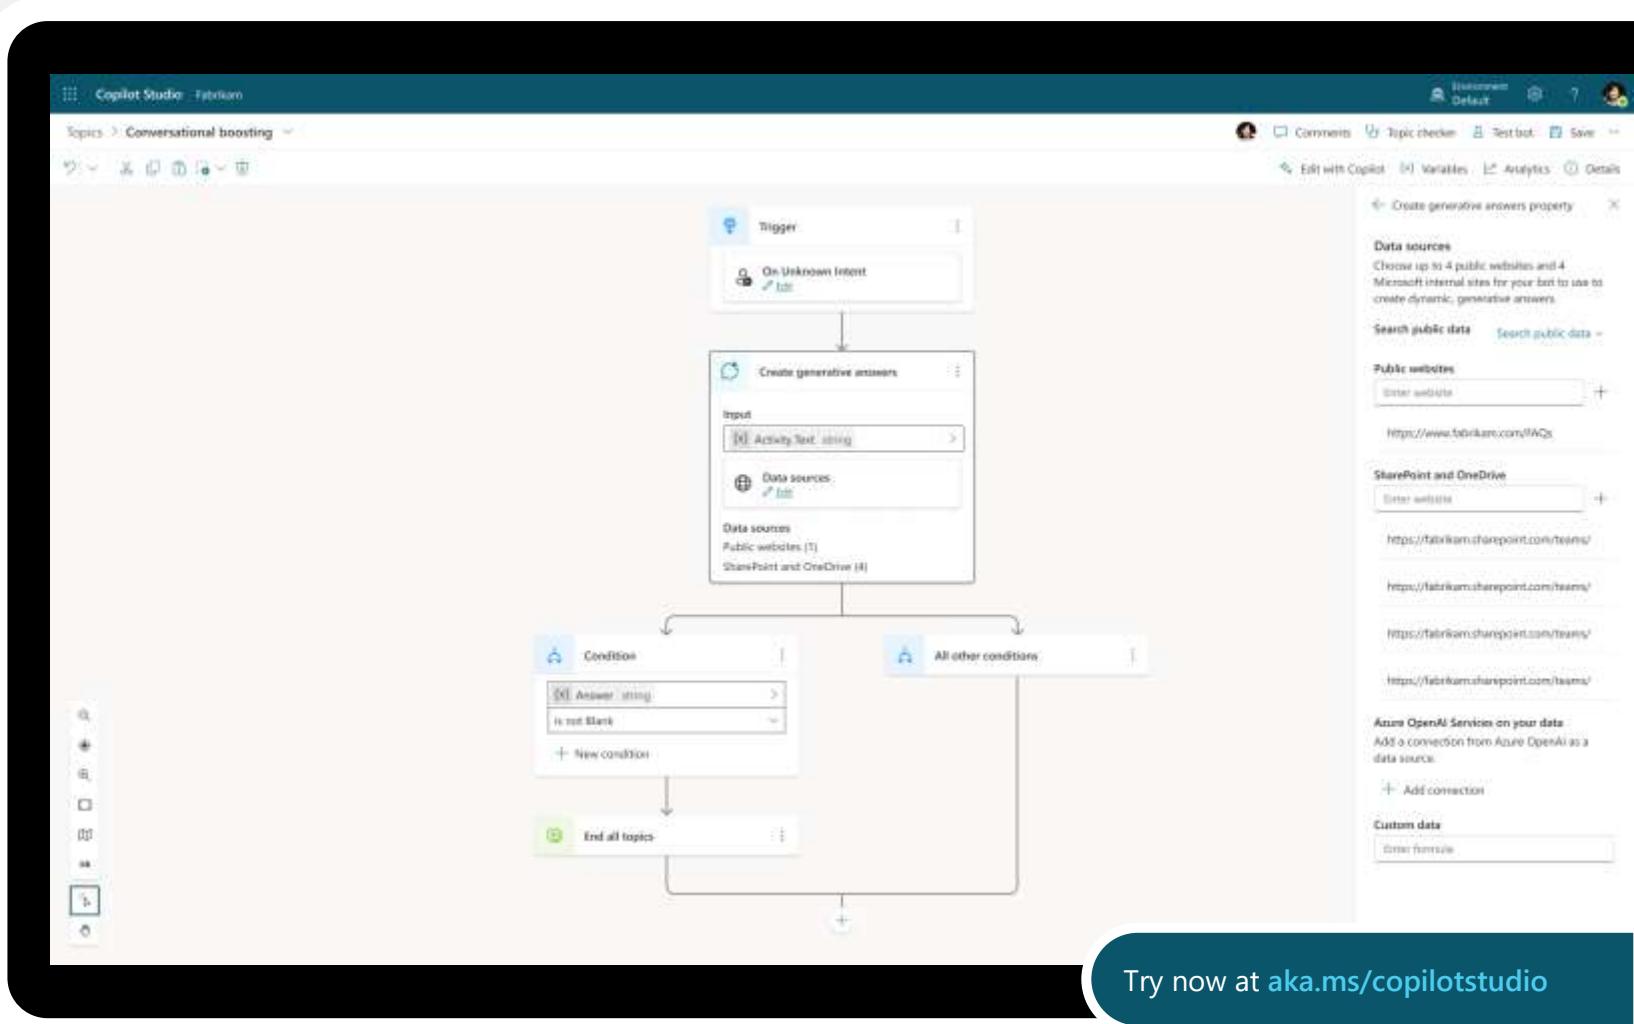

Out of the box, your copilot answers questions based on the content your organization has already invested in

Always up to date, your copilot uses your latest published content for each request; no more maintaining info in two places

Enable multi-turn chat over your own internal and external knowledge sources, files and sites with generative answers

Supports content on the **web**, **SharePoint**, **Azure Open AI** on your data, and **direct file upload** and custom calls to backends

You can even pull data **from an API or other backend system** and enable generative chat over it

Generally Available

Try now at aka.ms/copilotstudio

Generative Actions

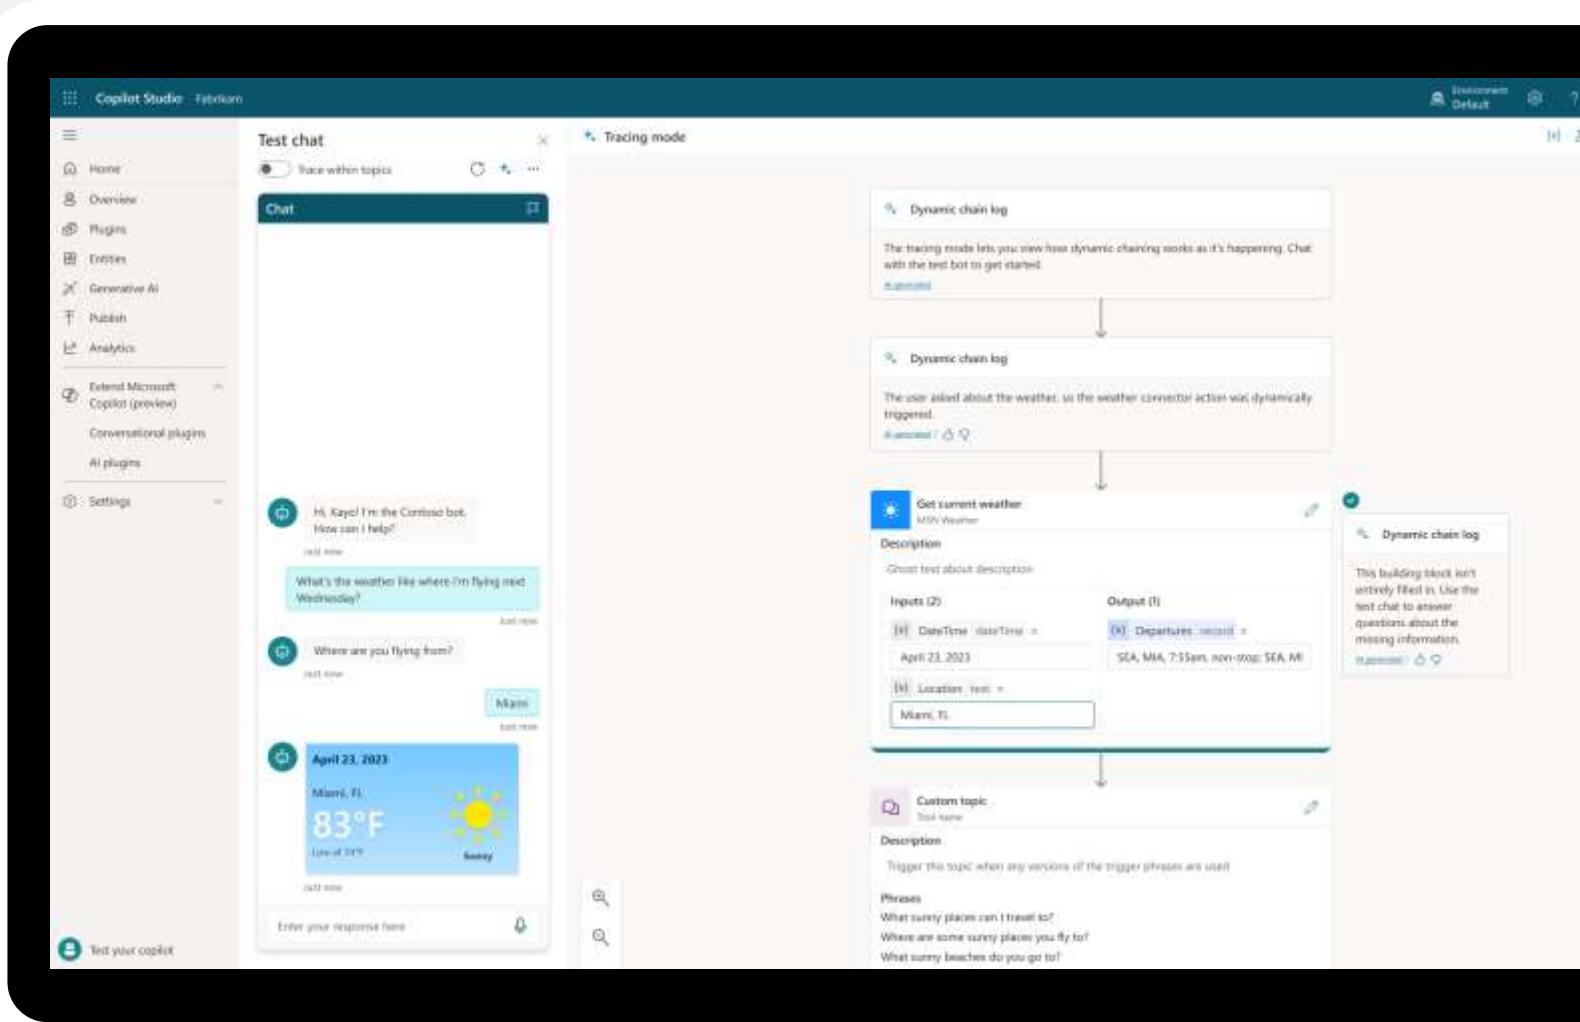

Dynamically chains plugins together to produce actionable customer responses

Automatically slot-fill further details to get the information needed for the task

Handle multi-intent queries that were not anticipated or built by the user

Powered by the Azure OpenAI Service with "LangChain" concepts

Example shows generative actions calling two APIs (Weather + Cruise APIs) based on request.

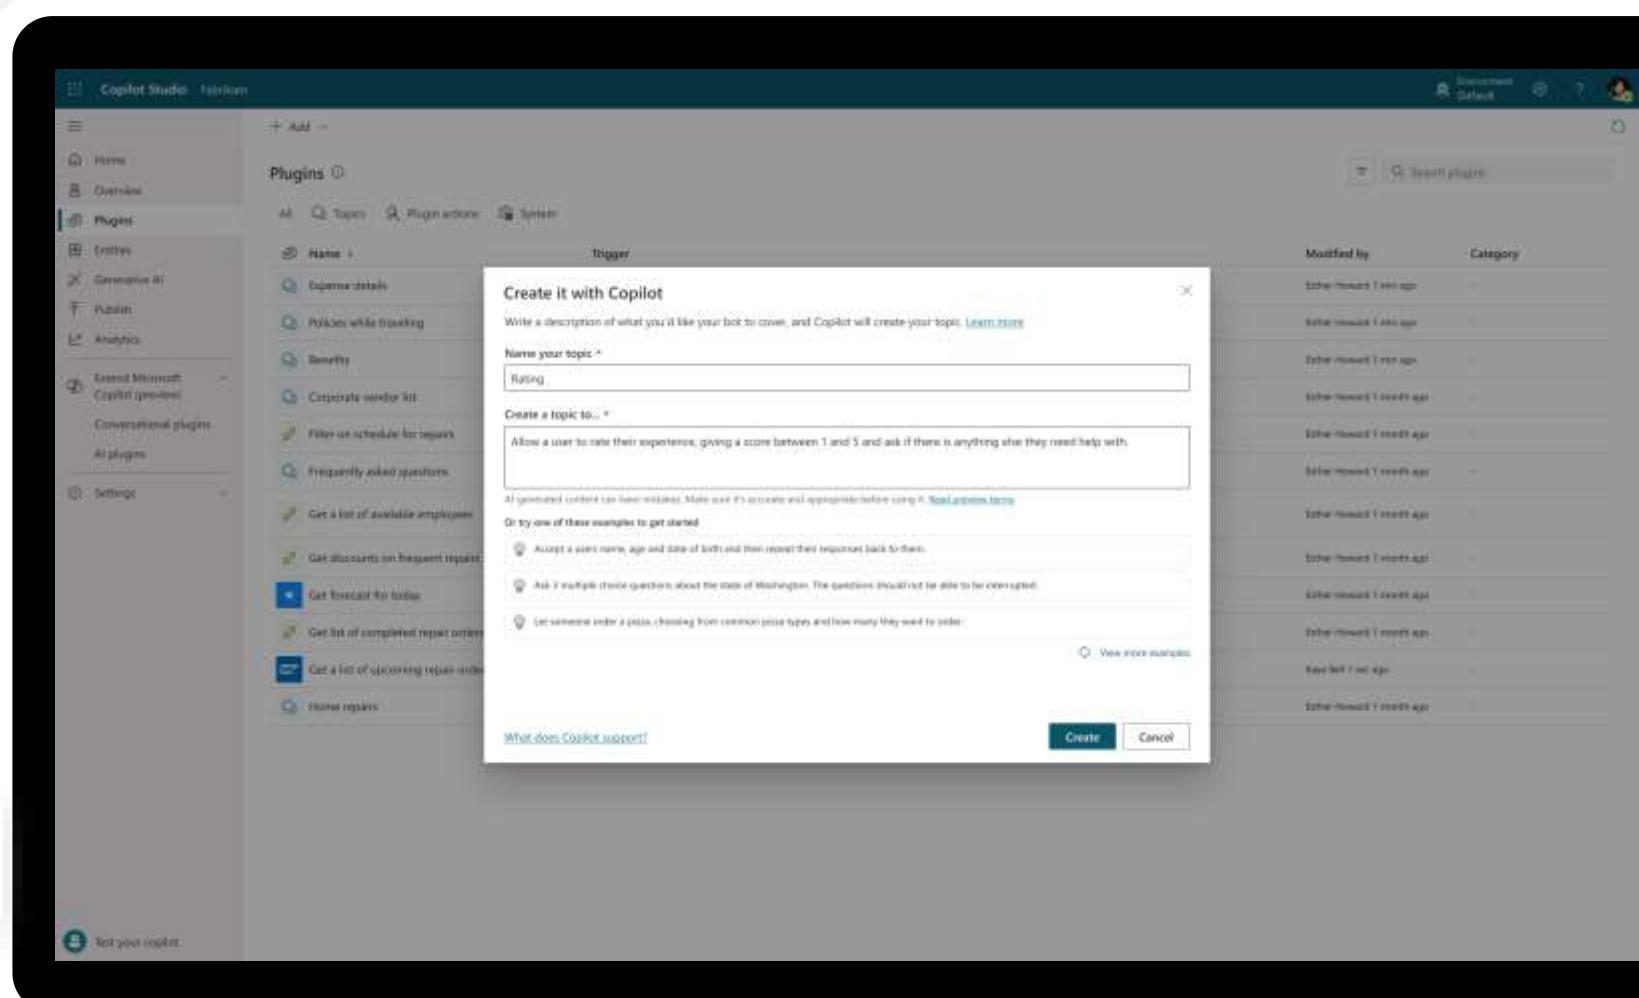

Public Preview

Generative Builder

AI assistance in building topics, designing and modifying a copilot- all through natural language

Assisted authoring for:

- Topic creation and iteration
- Response generation
- Adaptive Card generation
- Topic improvement suggestions
- Suggested trigger phrases, names, descriptions
- Transcript generation
- Copilot creation
- Topic suggestions

Generally Available

Create copilot with E2E SaaS and single pane of glass

Conversational Services
Integrate with Azure AI Studio, Azure Cognitive Services, Bot Framework and more

Monitor and Improve
with Rich out-of-the-box telemetry and analytics

Publish the copilot to
multiple channels, live instantly on the SaaS service

Chat over knowledge with Generative AI

Use generative answers and custom GPTs to provide enterprise specific answers over your files, websites, and internal shares

Create specific topics

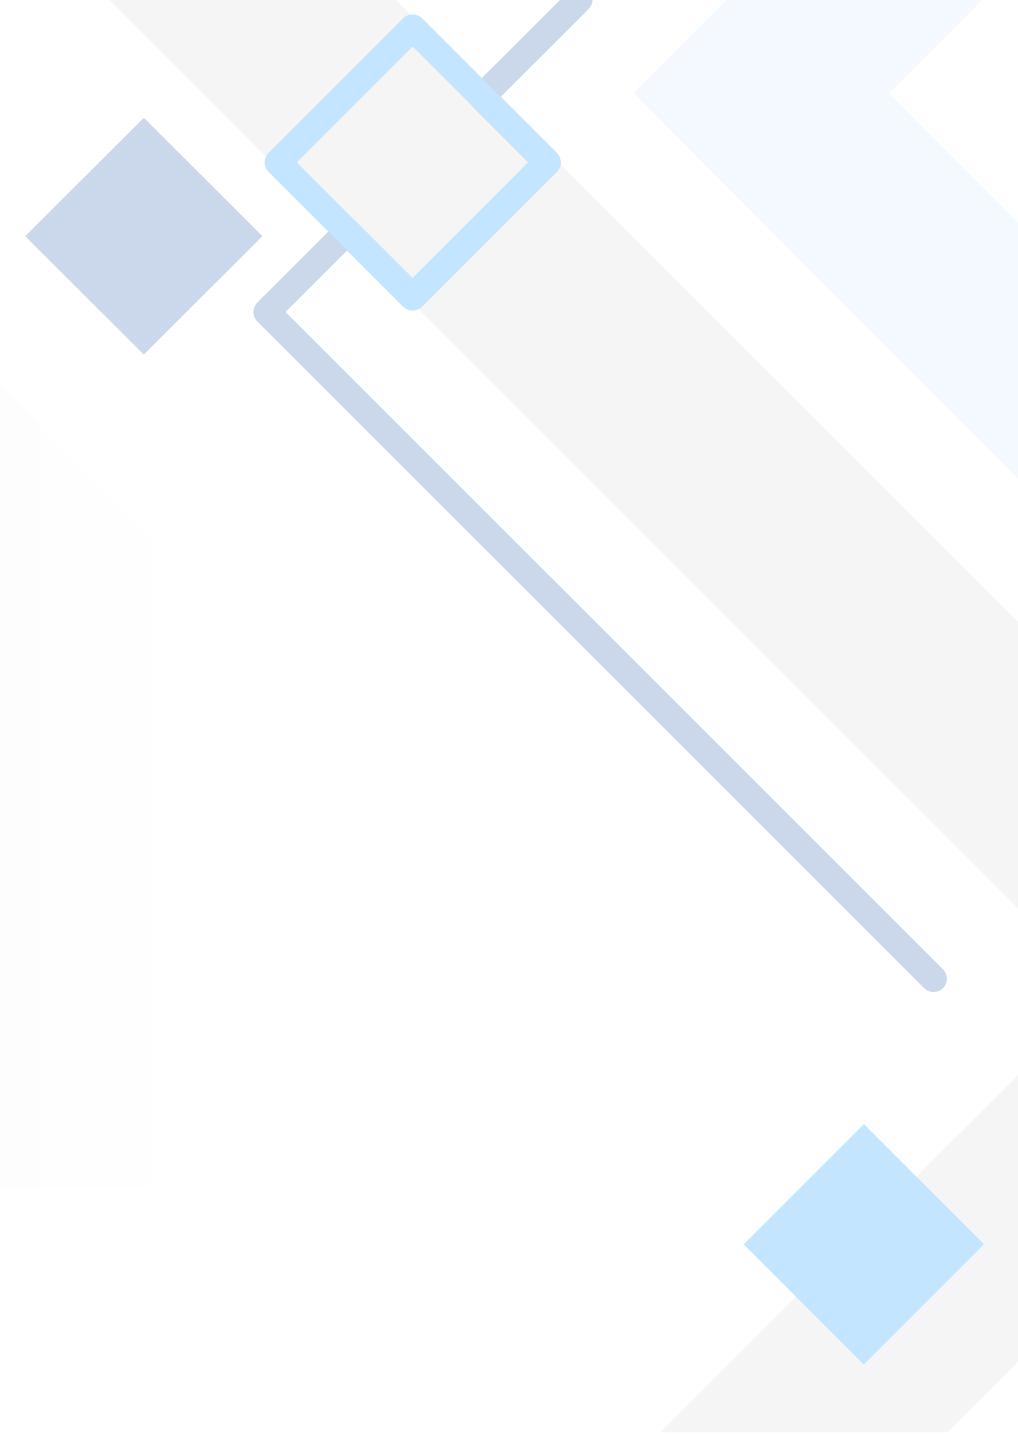

Supplement generative answers with specific, curated topics. Build them easily with the powerful graphical studio

Actions & Plugins

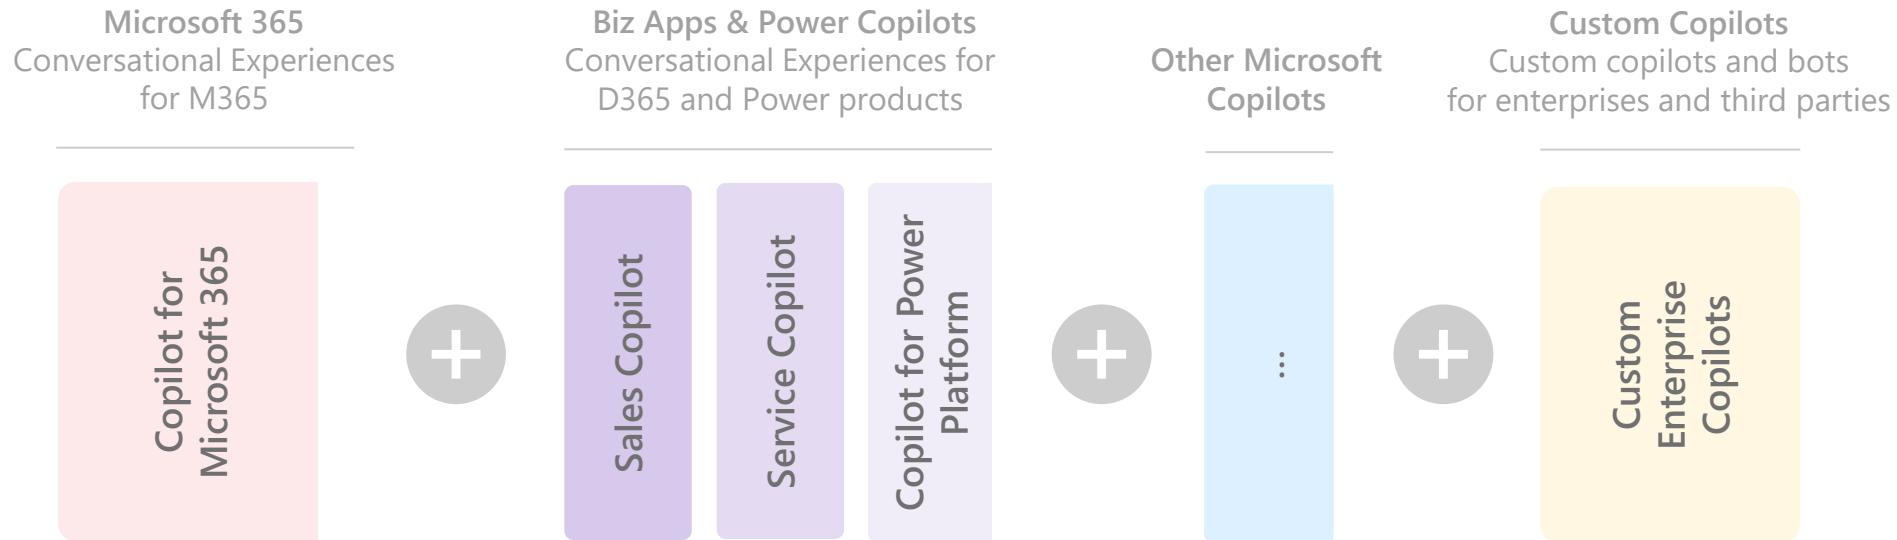

Create actions , plugins, or use pre-built Power Platform and OpenAI connectors to call your backends and APIs

Azure OpenAI on Your Data integration

Azure OpenAI on **YOUR DATA** enables Azure OpenAI's models (ChatGPT, GPT-4...) on **YOUR DATA** and can enable you to build powerful conversational experiences over it with Copilot Studio.

Customers can connect their data sources to unlock the full potential of their data in a compliant way!

The screenshot shows the Azure OpenAI Studio interface with the ChatGPT playground (preview) selected. On the left, there's a sidebar for "Prompt" with options like "Save changes", "Add a sample", and "Select sample prompt". Below it is the "Base prompt" which describes the AI as an AI assistant for Vodafone services. Under "Few-shot examples", there's a section for "Grounding data" with dropdown menus for "Select data source" (Azure Cognitive Search), "Select search resource" (SearchService), and "Select index" (SemanticIndex). The "Indexer schedule" is set to "Once". A "Remove grounding data" button is at the bottom of this section. In the center, a "Chat session" window shows a conversation about the cost of a pay-as-you-go plan in the UK. The AI responds with information from its grounding data. To the right, there's a "Citations" panel showing details for three health insurance plans: Northwind Health Plus, Northwind Standard, and Northwind Health Standard. The "Northwind Health Plus" card highlights comprehensive coverage for medical, vision, and dental services, along with preventive care services. The "Northwind Standard" card notes it offers more coverage than Northwind Standard, including prescription drug coverage. The "Northwind Health Standard" card states it only covers general and brand-name drugs. The "Comparison of Plans" section at the bottom compares the three plans based on their coverage of prescription drugs, emergency services, and other medical expenses.

Public Preview

Extend with Azure

Plugin custom Azure services including Azure Conversational Language Understanding, Question & Answering, Azure OpenAI Service and more to enhance your copilot.

Custom Language Understanding (CLU) Models

Connect CLU including dialog triggering, interruptions, did you mean and slot filling. Just map CLU intents and entities to Copilot Studio topics and you're ready to go!

BYO Knowledge Base

Connect existing Azure question and answering capabilities to query your FAQ knowledge bases.

Document search

Create your own cognitive search with Azure and your documents. Connect it up to the Azure OpenAI Studio and publish to Copilot Studio.

BYO Generative AI

Connect your copilot to the Azure OpenAI Studio and call generative AI and ChatGPT directly via APIs.

Automation studio

Power Automate's digital process automation is included in Power Copilot Studio with 1000+ prebuilt data connectors and automation templates.

3rd party connectors, including custom and on-prem

Connectivity

1 Discover

2 Automate

Use process mining to identify bottlenecks and opportunities for automation

With the Copilot Studio Process Advisor template, get a deeper insight into copilot conversation flows.

Create solutions by automating business processes with advanced AI, Digital Process Automation, and Robotic Process Automation.

Embed your automation flows directly into the conversation to drive action.

Prompt Building

A screenshot of the Microsoft Power Automate interface, specifically the AI Builder section. A modal window titled "Select a data source" is open, listing various Microsoft Dataverse entities: Address, Appointment, Attachment, Business Unit, Conversation history, Contact, Currency, CustomQueue, and Email. The "Conversation history" item is highlighted with a red circle around its icon. The main workspace shows a "Custom Dynamic Prompt" created on 07/07/2023 at 13:15:57. The prompt's formula is: "Summarize the [Last message] taking in account the [Attached file content] and the [Select your data source]". Below the formula are buttons for "Add dynamic value" and "Add data source". A "Test your prompt" dropdown and a note about AI-generated content are also visible.

Custom Dynamic Prompt 07/07/2023 13:15:57

Prompt

Summarize the [Last message] taking in account the [Attached file content] and the [Select your data source]

+ Add dynamic value + Add data source

Test your prompt

AI-generated content may be incorrect. Make sure it's accurate and appropriate before using it. [Read terms](#)

Select a data source

- Address Microsoft Dataverse
- Appointment Microsoft Dataverse
- Attachment Microsoft Dataverse
- Business Unit Microsoft Dataverse
- Conversation history Microsoft Dataverse
- Contact Microsoft Dataverse
- Currency Microsoft Dataverse
- CustomQueue Microsoft Dataverse
- Email Microsoft Dataverse

prompt Cancel

A single interface to build, design, and test Generative AI Prompts that can be embedded across products.

Prompts are saved in AI Builder's prompt library and become a platform concept (supporting sharing, ALM, RBAC). Prompts can be invoked in Copilots (via Plugins), Power Apps & Dataverse (via Power FX), Power Automate (via AI Builder connector).

Investir em Power Platform compensa

Quanto mais cedo você começar, mais tempo você colhe benefícios.

140%

Retorno sobre o investimento (ROI) ao longo de 3 anos

45%

Redução de custos de desenvolvimento de aplicativos

\$8.23M

Valor presente líquido valor (VPL)

Basic capabilities

1

Aplicativos e automações em pequena escala

2

Automação pessoal ou somente em equipe

3

Conectividade selecionada pronta para uso

4

Sharepoint, Excel ou Dataverse para equipes

5

Opções limitadas para compartilhar e reutilizar soluções já criadas

Resolva problemas apenas para equipes ou indivíduos

Ganhos de eficiência limitados a indivíduos, equipes ou pequenos departamentos.

A necessidade de troca de solução, entrada de dados repetida e risco de dados ruins

Permite estruturas de dados simples e gerenciamento de acesso limitado a dados.

Construção repetida de aplicativos e automações semelhantes, perda de eficiência.

Premium investment

1

Aplicativos e soluções podem se estender por toda a organização

Dimensionamento rápido e fácil, ganhos de eficiência e melhorias de desempenho

2

Automações entre sistemas e departamentos

Resolução acelerada de problemas, trabalho mais rápido e menor necessidade de repasses manuais.

3

Conecte tudo

Dados conectados significam resolução rápida de tarefas e menos esforço na manutenção de dados.

4

Dataverse

Gerencie dados e aplicativos para obter insights, impulsionar o negócio e reduzir custos.

5

Compartilhamento e dimensionamento fáceis e gerenciáveis

As pessoas que precisam dos aplicativos e dados podem ser concedidas facilmente sem medos.

Maximize seus investimentos com o Microsoft Unified

Acelere seu tempo de implantação com serviços liderados por especialistas, desde o planejamento até a implantação e muito mais

Conte com especialistas para construir seus aplicativos

Com acesso direto aos especialistas da Microsoft, você pode criar aplicativos personalizados usando o Power Platform para resolver desafios de negócios e automatizar processos de negócios

O que você quer alcançar...

- Estabeleça um modelo de governança e padrões e prepare-se para a IA
- Implantação bem-sucedida da plataforma de energia em toda a empresa
- Validação de processos de projeto e desenvolvimento de arquitetura de soluções

Como entregamos...

- Assistência na criação de um Centro de Excelência (COE) para governar a criação de aplicativos e acelerar a adoção em toda a organização
- Orientação prescritiva de especialistas para acelerar a implantação com workshops de Maker e Developer para melhorar as habilidades da equipe
- Revisões técnicas e funcionais para validar planos e abordar problemas e riscos
